

The Tandy 200 is the one portable for all.

Meet the New Generation of Portable Computing

Our celebrated Model 100 set a new standard in portable computing. Now we've done it again! Introducing the Tandy 200, another true breakthrough, featuring advanced features you requested. You get more built-in software, a bigger screen and a larger memory. All this in a system that measures just $2^{1/4} \times 11^{3/4} \times 8^{1/2}$ ", and goes wherever you go because it's completely battery powered.

Six Built-In Programs Including Multiplan™

For complex spreadsheet analysis and calculations, we put popular Multiplan software into the Tendy 200's permanent memory. It's easy to do sales forecasts, profit and loss projections, budgeting, pricing, engineering calculations and more.

Comes with Five More **Powerful Programs**

An improved version of the Model 100's easy-to-use word processing program makes the Tandy 200 especially useful for journalists, salespeople, students and anyone who needs to write letter-perfect memos, reports and correspondence in a hurry. Edit, delete and move blocks of text with the touch of a convenient function key.

Four other "instant-on" programs let you use the Tandy 200 as your personal appointment calendar, address and phone directory and telephone auto-dialer/directory (the Tandy 200 generates tone dialing pulses, so you can use it with longdistance services). A much more powerful built-in program for communications makes it easy to access other computers by phone, as well as national information networks. Resident BASIC language lets you write your own programs, too.

Why 40 Columns Are "Bigger" than 80

Take a look et the 80-column screens on other portables, and you'll see why we chose a 16 x 40character format. Characters on 80column displays are tiny and difficult to read. Tandy 200's flip-up liquid crystal display has 240 x 128 resolution for big, clear graphics and easy-to-read characters. Tandy 200 is the perfect take-along tool for word processing and spreadsheets—without eyestrain.

We also increased the standard memory size to 24,000 characters. expandable to 72K.

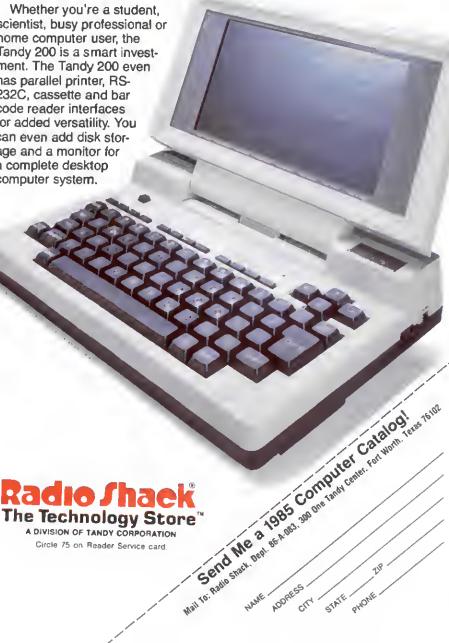

The Best in Technology for Under \$1000

Whether you're a student, scientist, busy professional or home computer user, the Tandy 200 is a smart investment. The Tandy 200 even has parallel printer, RS-232C, cassette and bar code reader interfaces for added versatility. You can even add disk storage and a monitor for a complete desktop computer system.

Adopt One Today!

Step up to the powerful software and impressive capabilities of the Tandy 200 portable computer for just \$999 (26-3860), Best of all, the Advanced Technology Tandy 200 represents the state of the art in performance, quality and price breakthrough (because we've introduced the latest technology for over 60 years). Stop by your local Radio Shack Computer Center, or participating Radio Shack store or dealer and "size it up" today!

Prices epply at Radio Shack Computer Centers and et participating Radio Sheck stores and dealers. Multiplan/TM Micro-

THE SOURCE OF TRS-80 SOFTWARE!

IF YOU BOUGHT YOUR SOFTWARE ELSEWHERE, YOU PROBABLY PAID TOO MUCH

JMG is one of the largest sources for TRS-80 software around. We specialize in software for Models I, III, and 4. Our prices are the best, and if you find a better price then we'll beat it! (see pricing policy) As well, we support the programs we sell. Our software is only ell top-quality, and our 99% satisfaction rate speaks for itself. With the best prices, selection, and support all on your side, you can't lose! Model 4 owners: All Model 3 programs we sell will work on the Mod. 4 in "III mode". Remember that JMG now offers FREE SHIPPING on all orders to the continental U.S. or Canada of over \$25!

some of the latest developments in computer software

* SUPER * * SOFTWARE *

some of the greatest developments in computer software

ENBase

ENB is a "Relational data-base manager" offering an excellent mixture of functions. These functions include: 1) True relation-al access; 2) Generalized data structures with verieble-length fields, and no record-length constraints; 3) Structure extension without reorganisation or reprogramming: 4) Multiple disk-drive support; 5) Deta Integrity; 6) High-level BASIC interface; 7) Menu-driven interactive data entry/display.

HITCHHIKER'S GUIDE TO THE GALAXY

ACCEL 3/4 BASIC COMPILER

This compiler from Southern Software and Allen Gelder is one of the best. It will give excellent performance improvamants on most programs including games, graphics, etc. It compiles almost all BASIC commands, and produces fast machine language programs.

ACCEL 3/4. Model 1/3 Disk......\$89.S0

T/MAKER

This integrated software package for the Model 4 combines word processing, dictionary, spreadsheet, data base management, and graphics all into ona package. An excellent over-ell package, and a great price!

T/MAKER, Mod 4 only. (list \$299)......\$269.50

Alcor C Compiler

Uses TRSOOS, LDOS, NEWOOS, OOSPLUS, or, MULTIDOS. A full K & R standard implementation of C language. Includes a Unix compatible function library, a 450 page manual with a tutorial on using the C language, full screen text editor, and an advanced development package. For anyona interested in C, this is the ideal time to try it out!

Alcor Multi-Basic Compiler

Uses TRSDOS, LOOS, NEWDOS, DOSPLUS, or MULTIDOS. Multi-Basic Is a TRS-80 BASIC compatible compiler. There are versions for the Models 1, 3, and 4. All versions support everything in the TRSDOS 6 BASIC interpreter. The COMMON statement is the only one unsupported in the Model 4, end the exception in the Models 1 and 3 is the CMO statement. Multi-Basic supports advanced language features, eg. multi-line procedures and functions, recursion, dynamic string management, etc. and includes full screen text editor and advanced development package.

Multi-Basic Compiler (list \$250)......BASIC PRICE \$84.50

LE SCRIPT

Our best selling word processor, loeded with many features not found anywhere Our best selling word processor, loaded with many features not found anywhere else. Characteristics of Le Script include great printer support, ease of use, full Model 4 support, and much more! On a 128K Model 4 you can have over 90K of text buffer for use on a single file (not split) into multiple buffers as is the case in other WP programs). Model 4 features also available while running in the Model 3 model The same program will run under most DOSes, from TRSDOS 2.3 on a Model 1 to DOSPLUS IV on a Model 4. At our low price, this

ELECTRIC WEBSTER

The best word processor for the TRS-80 Computers. Includes a 50,000 word dictionery, and integrates with most word processors. Features fast checking, interactive correcting, and the ability to add your own words to its dictionary. Not much more you can say about this program, just that it does the job and it does it very well. (Get it quick, before the price goes up to \$129.50) Specify

WORD PROCESSING PACKAGE DEAL

Buy both LE SCRIPT and ELECTRIC WEBSTER together and save even more! These two programs work great together, so if you're getting into serious word processing, this is the "first class" way to go. This offer is only available for a limited time!

SAVE S80 OFF THE LIST PRICE!!!
W.P. PACKAGE OEAL.....\$199.50

TAS Public Domain Disks

These disks contain e collection of quality public domain programs from all over. There's a wide selection here, from games to utilities to applications, and much more! Each disk is a 40 track "floppy" disk, end both sides are filled to

PUBLIC DOMAIN DISK PACKAGE, #1 to #4. \$34.50
PUBLIC DOMAIN DISK PACKAGE, #1 to #6. \$49.50 PUBLIC DOMAIN DISK (Specify #1 te #6).....each \$9.50

PASCAL-80 (NOW ON SALE!!!)

The easiest version of PASCAL to learn! You get extensions to PASCAL that give you screen control, random access files, calls to machine language, the ability to create turn-key packages, etc. PASCAL 80 is a nearly complete subset of standard PASCAL, including structured types, records, pointers, variables and tiles. Editor and Compiler are in the memory.

GREAT PROGRAMS. GREAT PRICES AND FREE SHIPPING!!!

Once again we present our line up of quality software for TRS-80 Models I, III and 4. Also, keep your eye out for Model 1000/1200 software coming real soon, and other new surprises. Two new products worthy of note: WARRIORS AND WARLOCKS, a sophisticated D&D type adventure/role playing game for true D & D fans (write for more information), and TFC-BBS, by far the best TRS-80 BBS program around anywhere and for only \$99.50. Also, note the special sale prices for ALCOR's Č and MultiBasic compilers; these great programs now have great prices to match.

oad 80 gathers together selected programs from this issue of 80 Micro and puts them on a magnetic medium for your convenience. It is available on tape or disk, and runs on the Models, I, III, and 4.

Load 80 programs are ready to run, and can save you hours of time typing in and debugging listings. Load 80 also gives you access to Assembly-language programs if you don't have an editor/assembler. And, it helps you build a substantial software library.

Using Load 80 is simple. If you own a tape system, load the Load 80 tape as per the instructions provided. If you own a Model 1 or iil disk system, you boot the

Load 80 disk and transfer the files to a TRSDOS system disk according to simple on-screen directions. If you own a Model 4, copy the Model 4 programs from the Load 80 disk to your TRSDOS 6.X disk using the COPY command.

Not all programs will run on your system. Some Model III programs, for instance, will run on the Model 4 in the Model III mode, but not in the Model 4 mode. You should check the system requirements box that accompanies the article to find out what system configuration individual programs require.

If you have any questions about the programs, call Keith Johnson at 603-924-9471. Yearly subscriptions to Load 80 are \$199.97 for disk, or \$99.97 for cassette. Individual loaders are available on disk for \$21.47 or on cassette for \$11.47. Including postage. To place a subscription order, or to ask questions about your subscription, please call us toll free at 1-800-343-0728 between 9 a.m. and 5 p.m. Or, you can write to Load 80, 80 Pine St., Peterborough, NH 03458.

Did you know? Only one spelling checker:

- · works with both Scripsit and Superscripsit.
- integrates with all other popular word processing programs as well.
- requires no special document placement! Even runs on a single drive system.
- displays its dictionary so that you can find the correct spelling of words.
- offers integrated Hyphenation Option and Grammar & Style checker.

Electric Webster

SPELLING CHECKER "AUTO-HYPHENATION" GRAMMAR CHECKER

Displays Correct Spellings: If you don't know the correct spelling of a word, EW will look it up for you, and display the dictionary.

Verifies Corrections: If you think you know the correct spelling of a word. EW will check it for you before making the corrections.

Hyphenates Automatically: (Optional). Ioserts discretionary hyphens throughout text.

Grammar & Style Checker: (Optional). Identifies 22 types of common errors. Makes suggested corrections with the stroke of a key. Runs within EW.

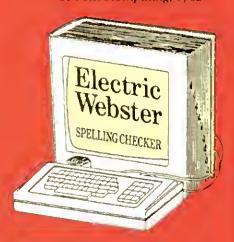

50,000 Word Dictionary: Uses only 2½ bytes per word; add as many words as you wish.

Fast Correcting: In as little as 30 seconds, Electric Webster can return you to your Word Processing program, with your text fully corrected and on your screen.

Integrates: with WordStar, Deskmate, Spellbinder, Volkswriter, Open Access, Allwrite, Newscript, Lazy Writer, Superscripsit, Scripsit, Electric Pencil, Copy Art, Powerscript, Zorlof, and LeScript (specify). Begins proofing at the stroke of a key; returns you to word processing automatically.

When ordering, stipolate word processing program and operating system.

Cornucopia Software

POST OFFICE BOX 6111, ALBANY, CALIFORNIA 94706, PHONE (415) 524-8098

The following welcome is for new Model I/III/4 owners only. The rest of you can move on to the next subject.

The Lost Tribe of Tandy

Welcome to the strange, dark land of TRS-80 microcomputing. Have a seat, and let's talk for a few minutes.

I'm tempted to ask how on earth you ever got here. The old and tangled trails that wind through the MS-DOS jungles are dangerous, and not too many people make the trip. Most are discouraged by their friends, who have heard the horror stories of what it's like in the savage world of 8-bit computing. But no matter. Perhaps you're simply one of those curious, carefree souls who likes the smell of danger. The fact is that you're here, so you might as well know what we're all about.

I can't say that the horror stories are entirely unfounded. It's a long way to civilization, and you've got to have a stornach for wilderness living. Even many of the toughest old leather-skinned explorers have forsaken these impenetrable swamps and forests for the comforts of the modern world. You might have seen signs of their departure on the trail, the broken expansion interfaces and ruised drive casings and ruined monitors, tossed carelessly aside to rot.

But there's another side to it as well. While survival can sometimes be rough, you can also live comfortably here. And there's a certain undeniable satisfaction in knowing that your success is based partly on your own resourcefulness and creativity.

Anyway, let's take a look around. This is the main compound. As you can see, you're not the only new one; many of these houses are newly built. You'll undoubtedly get to know their owners before too long: around here, a sense of community is the key to well-being and happiness.

The compound is much smaller than it used to be, as the ruins that surround us testify. We were once the largest settlement in the jungle, with thousands of acres cleared for cultivation; you could see the fields and roads and clusters of houses to the horizon.

Then IBM started up, and we began to have trouble holding people here. Our benefactors, Tandy Corp., looked on as one caravan after another wended its way back, waving the MS-DOS standard in the breeze. It was pretty damned depressing at the time, with the dozens of boarded up shops and the weeds taking over the streets. But you get used to modest living.

As you might guess, we've got a closed economy, without much interaction with the rest of the world. A handful of craftsmen sell their goods—a few DBMs, a half-dozen or so word processors, some spreadsheets, and the like—but we do a lot of our own work. You're probably going to have to learn some Basic if you don't know it already. Many of us also know at least a smattering of Assembly.

Fortunately, we're blessed with a lot of good tools, including TRSDOS 6.X and the utility packages supplied by third-party vendors. Visitors from the outside marvel at what our backwater culture can do, and on occasion will even admit that we can do things better.

You might be interested to know the advantages to living here. For starters, it won't cost you much to get by. Also, the equipment is pretty good; you won't find a computer around that will give you as much for the money as the Model 4 does. And whatever we might think of some of Tandy's peculiar ideas on marketing, they provide pretty decent support, and will be doing business for the foreseeable future.

Most important, though, is that we're a tight-knii community. Those who have been here for a while are willing to share their knowledge. The people who sell software, peripherals, and add-ons will give you personal and reliable service.

The disadvantages? Well, you won't get much respect when you visit the outside world. When you say "TRS-80," you'll get a lot of blank stares, a few nostalgic comments from those who lived here once, and perhaps an inquisitive comment from an anthropology student. You'll feel like you belong to a lost tribe.

You'll also find yourself losing touch with the rest of the world if you're not careful. You can live here for years without knowing anything about MS-DOS. dBase II, 1-2-3, or Sldekick—not that you have much reason to.

As for 80 Micro, we're the local rag, a combination of shopper, town crier, and information service. We'll give you the low-down on how to make your experiences here less stressful and more rewarding.

So enjoy your stay. And if you ever get a bit frustrated, or feel like you're living life in the slow lane, just remember: It's a jungle out there.

MS-DOS Returns

Fans of our deceased 2000 Pius column will be glad to know that we're replacing it with a new MS-DOS column starting next month. Authored by 80 Micro technical editor Dave Rowell, who wrote the June cover story on the Model 1000, it will feature hints, tips, and advice for MS-DOS owners. The column will focus primarily on the Model 1000, but will also cover the 1200 and 2000.

Naturally, we welcome reader input. If you own a Tandy MS-DOS machine, send us your ideas and comments, as well as a wish list of the kinds of material you'd like Dave to include.

Also, in the same issue, we'll be splitting our New Products section between Tandy (200, 1000, 1200, and 2000) and TRS-80 (I/III/4/4P) products. This will help owners of different systems more quickly find the information relevant to their needs.

These were printed by DOTWRITER on an Epson MX-80.

See What You Can Do With DOTWRITER 4.0!

Now available for the Model 4, too!

**** 80 MICRO June.

OTWRITER lets you create spectacular, eye-catching letterheads, catalogs, invitations, or even books. It is just what you need to turn your dot-matrix printer into a versatile typesetting machine. And it's available for the Model 4 (ves. in native mode) as well as for the Models I and III.

What is DOTWRITER?

DOTWRITER uses the "bit-image graphics" of your printer to produce the kinds of stunning results shown inside the box. It is o full-function text printing program, so you can inter-mix different character sets, do centering, paragraphs, paginotion, magnification, draw horizontal and vertical lines, reversals (white on black), and even print right-justitied proportional text.

DOTWRITER includes the printing program, complete documentation, and fourteen useful sets of typefaces (60 to 90 characters in each set). We will include the I60 page Letterset Reference Summary at half-price (\$10.00) with your order.

To use DOTWRITER, just write your text with any popular TRS-80 Word Processor, add the necessary format-

ting commands, and DOTWRITER will do the rest.

35 more disks are available separately. Each has 3-12 complete typefaces (60-95 characters in readers' choice each set). micro These disks cost less than \$25 each, and may be purchased of any time.

If you want to create your own logos, modify our typefaces, or even design entirely new typefaces, then you will also want to order the "Letterset Design System" (LDS). We offer LDS at half-price when you order it olong with DOTWRITER. LDS operates in Model III mode on the Model 4.

Versions are available for Epson MX-80 with Graftrax, MX-100 with Graftrax-Plus. RX-80, FX-80, C. ITOH 8510/1550, Microline 84/92/93; Radio Shack's DMP series 200-2100, CGP-220 & Gemini 10X, 15X, Please specify printer and computer!

Our print samples were done on an Epson. Sizes vary on other printers. Some of the samples shown here are taken from the additional Letterset disks.

Two disk drives and at least 48K of memary are required. LDS is not available in native Model 4 mode.

Send for free print samples! We've only shown you a few of the 230 DOTWRITER fonts. If you want the best in graphics printing, we suggest you order DOTWRITER today, toll-free.

Piease specify printer and computer when ordering.

The Premier Word Processor for Your TRS-80 Model I, III, or 4

the one Word Processor that will satisfy all your writing needs: ALLWRITE. It sets new standards for text editing and printing, and will give new life to your TRS-80. Let us tell you why...

In an attempt to push the public into expensive 16-bit computers, many manufacturers have been soying that the TRS-80 is obsolete. The truth is that the software, not the hardware, makes the difference. And the best word processor of all is now available only on the humble TRS-80, not on those expensive 16-bit machines!

ALLWRITE is based on the proven methods that made NEWSCRIPT the most popular independently produced TRS-80 word processor, but it also has the speed and new leatures our customers have asked us for. ALLWRITE will sove you time and let you produce the highest-quality, most professional looking letters, term papers, and reports ovailable on a micro-computer.

Allwrite Can Save You Time!

Reads a 25,000 character file (10 printed pages) from disk in SIX SEC-ONDS...does a global search-and-replace in FOUR SECONDS...outruns even the lastest popular micro-printer.

ALLWRITE'S Screen Handling Makes Word Processing Easier Than Ever

Change text width at any time; wide lines shift lelt and right as you type. ALLWRITE preserves double-blanks between sentences, uses the entire screen for text, and displays a complete Status Screen of the touch of a key. Scroll by line, partial screen, full screen, to top or end of file, or to ony marked point. Move cursor by character, word, tab, line, or screen.

You can set and change on-screen tobs and store them on disk. The print-time tabbing features are incredibly versatile: they allow left, right, and centered tobs, and even line up your decimal points.

ALLWRITE shows you where you

forgot to turn off underlining, boldface, itolics, or double-width. Special onscreen Preview feature shows page breaks and page layouts...including underlining and boldface...without annoying blinking or screen flicker. In "Summary" mode, ALL-WRITE quickly flags formatting errors without

These were printed by ALLWRITE; shown 20% actual size.

wasting time printing all the text. These standard leatures make document preparation laster and easier than ever!

State-Of-The-Art File Handling

There is no upper-limit on document size with ALLWRITE, because it chains files backwards as well as forwards, even across diskettes. Switch from one chained file to another in less than six seconds by pressing two keys. Select portions of other files for inclusion at print time...great for stock paragraphs.

ALLWRITE salvages text from bad disks! If a sector goes bod, you won't lose the entire file, because it will skip bad sectors, read the rest of the file.

TAKES FULL ADVANTAGE OF YOUR MODEL 4.

The model 4 version of ALLWRITE uses the entire 80-by-24 screen. On a 64K machine, you can edit over 34,000 characters of text. On a 128K machine, you can edit THREE FILES AT THE SAME TIME! The second and third files can be over 32,600 characters each, for a total of almost 100,000 characters of text in memory.

and then show you where the lost text belongs. This advanced error recovery turns a disaster into a feeling of protound relief.

User-Definable Soft Keys Reduce Typing Time

You can store 22 phrases or commands at a time into "soft-keys," then press just two keys to retrieve them. This makes frequently-used phrases and formatting controls a snap to use. You can store these definitions on disk and build a library of hundreds of preprogrammed keys to fit every one of your applications.

Our specially-designed templates fit right on your keyboard to let you see your settings at all times. Each template is also a Reference ("Cue") Card, so it is always right in front of you when you need it, without using up voluable screen space.

ALLWRITE Is Easy To Learn

ALLWRITE's commands and control keys are easy to remember because they use the first letters of common English words: 'CE' stands for 'Center,' 'Search' and 'Replace' do just that, and so forth. The on-line HELP menu ollers over fifty screens of topics.

NEWSCRIPT's documentation was acclaimed in every review, and ALLWRITE's 350-page book is even better. Portions of it are designed for beginners, with every feature clearly explained in step-by-step tutorial style. Since you wan't always be a beginner, other parts of the book offer advanced topics. There is a cross-reference summary chapter, and a detailed Table of Contents. We've been developing computer programs and manuals for over 20 years, and understand the importance of good documentation.

To make installation easy, we include Tiny DOSPLUS for the Models I and Ill, and special, pre-tailored versions of both TRSDOS 6.2 and DOSPLUS IV for the Model 4, all at no extra charge. The Model I and Ill versions work equally well with all major DOS's.

PROSOFT'S On-Going Customer Support

Perhaps the best reason of all for having ALLWRITE is the continuing support we offer you: friendly, expert, direct support that is unsurpassed in the micro-computer industry. There is no time limit to our support: if you are our customer and you need help, just call or write. We give free updates for 90 days, and charge little or nothing for minor updates thereofter.

Customer Comments

"This is the best software package I have ever received ... superb, easy to use, last, and has more features than the business word-processor at the office." (E.R.L.)

"ALLWRITE is a professional system that sets a new standard in word processing. It's powerful and easy to learn and use."

80 MICRO, Nov., 1984

"Your company and products have to be one of the strongest factors I can think of for keeping me with the TRS-801" (J.R.H.)

"NEWSCRIPT is the Cadillac of word processors. ALLWRITE is the Mercedes Benzi!" (B.E.)

"...a very readable manual." (D.S.)

BENEFITS OF OWNING * * ALLWRITE * *

If Word Processing is important to you. PROSOFT's ALLWRITE is the best choice you can make. The clean, professional appearance it adds to your letters and reports will make an excellent impression on people. We will be hoppy to send you free print samples so that you can see for yourself how good ALLWRITE will make you look.

You probably know that quality word processors for CP/M and the IBM-PC sell for \$300-500, and they don't have ALLWRITE's capabilities or speed...or PROSOFT's proven, on-going support. Now, for a fraction of the cost of a new computer, you can have the most complete word processor of all. And you won't have the headaches of starting all over again with a new, different computer.

Note to college students: with its Footnote, Table of Contents and Index features. ALLWRITE is ideal for your reports and Term papers.

Circle 30 on Reader Service card.

HUNDREDS OF USEFUL CAPABILITIES

ALLWRITE comes with just about every useful word processing feature ...staadard. Here are some highlights: excellent right-justified proportional printing on most printers having that ability; powerful Form Letter and Mailing Label preparation; Instant counts of words, characters, lines, changes; block Move, Copy, Delete, Putille, Getfile, and List; delete by character, word, line, sentence, paragraph, or block; insert and onekey insert; great RS-232 printer support; accepts all 256 ASCII codes from keyboard; intermix pitches on same line (printer-dependent); 1.5 line spacing, 6, 7, 8, 12 lines per inch (printerdependent); does multiple-columns on all printers; perfect alignment of hanging indents; variables, logic statements, conditional printing: wildcard Directories; integrated with Electric Webster and DOTWRITER for Models I, III, and 4 (these are sold separately): "Legal" line numbering; paragraph, list, and figure numbering; supports most popular printers (all "printer drivers" included); compatible with highmemory drivers; fully explains all DOS and ALLWRITE error meseages; wildcard search-replace; tabs, searchreplace, other settings remembered across files; word reversal; up to nine levels of boldface; flexible page titles; factnotes at bottom of page or end of document; Table of Contents and Index generation; and PROSOFT's unmotched text formatting and printing capabilities,

Attention NEWSCRIPT Owners

You can trade in your copy of NEW-SCRIPT at very substantial savings. Please call our technical line for details.

How To Order

You can order by phone or moil. For quickest delivery, call our Technical Support line. Please specify your TRS-80 model (I, III, or 4, 48K, at least two disk drives), and your printer(s). Our price includes normal shipping in the U.S. and Conada. The sooner you order, the sooner you will begin to benefit from the ALLWRITE! Word Processor.

Minus 2000 Plus

I read with shock and anger of your decision to discontinue John B. Harrell III's excellent column (2000 Plus), the primary reason I subscribe to your magazine.

I do not know how you conducted your survey, from which you concluded that not enough readers owned a Tandy 2000 to justify the column. I do know that I did not participate in it, nor did several other 2000 owners with whom I have spoken.

At a time when the popularity of the 2000 seems to be increasing, your decision seems curious at best. I looked seriously at the 2000 and its competitors for over a year before opting for it. Perhaps many others have done the same, and another survey would deliver different results.

Paul A. White Abilene, TX

I just read that 2000 Plus is being discontinued. It is fortunate I learned about this before I renewed my subscription. I wonder how you know how many Tandy 2000 owners are reading your magazine. Are we supposed to call and tell you?

W. A. Fronek Houston, TX

We based our dectsion to drop the column on Reader Service card questionnaires, which showed the number of 2000 owners leveling off at about 3.5 percent of our readers.

-Eds.

Name That Program

Thanks for giving uscredit for creativity in naming our program xT.CAD. The name T.CAD has humble roots: CAD is a popular acronym for computer-assisted drafting, and every draftsman can still easily relate to the old T-square that our system makes, alas, obsolete. The lowercase "x" distinguishes the extended version of T.CAD Professional from its smaller brother, T.CAD Apprentice.

But we also love your criticism and therefore announce a competition for a beiter name. It's open to anyone; just send your idea to my attention by July 31, 1985. The winner will get a free copy of xT.CAD (a \$450 value) and the first

runner-up will get T.CAD, even if we don't change the names.

Chris Brozek, President Microdex Corp. 1212 N. Sawtelle Ave. Tucson, AZ 8571

Stay tuned for contest results.

—Eds.

A Screen Gem

I found Jim Heid's article "The GW Difference" (February 1985, p. 42) interesting and a joy to read. But he missed one point about display formatting.

Heid explained that the Print @ feature is "gone, thank goodness," and went on to praise GW Basic's Locate X.Y feature. He didn't mention that the Model 4's Print @ statement is almost the same as Locate X.Y. You can format it two ways:

PRINT @ X,"Whatever"
PRINT @ (X,Y), "Whatever"

Thomas Szilagyi Cranston, RI

Dynamic Duo

As a stand-alone computer, the Model 100 is extremely limited, as are most lap-sized computers in its price range. Adding disk drives and other paraphernalia simply raises the cost without increasing efficiency.

However, for the price of add-ons, you could buy a Model 4P (an excellent computer), free yourself from the computer station, and use the 100 as a portable modem. I don't know why Tandy

doesn't package the 100 with the 4P. The 100 costs no more than a good modem and provides considerable convenience and power when used with a desktop.

Charles Harris Island Heights, NJ

They Also Ran

What ever happens to all of those programs that don't win the grand prize or first place in the Young Programmer's contest? Is there a way to get listings and documentation for other winners?

Kim Williams Las Vegas, NV

Some winning programs are ovailable for downloading from our bulletin board system (603-924-6985).

-Eds.

80 ALERT

Occasionally, 80 Micro receives letters from advertisers who have changed their status, or from readers who have had difficulties with our advertisers. Most problems are resolved to the satisfaction of all parties, but some appear insoluble.

As a service to our readers and advertisers, 80 Alert posts the names of advertisers we are unable to reach, or who have changed their address or status. Anyone who has new information about a manufacturer or distributor, or who has a complaint, should write to 80 Alert, 80 Micro, 80 Pine St., Peterborough, NH 03458.

At the request of some of our readers, we have attempted to contact Micro Projects Engineering Inc., 3951 Higuers St., Suite B. Culver City, CA 90230. Our letters remain unanswered and their telephone is disconnected. This company has advertised in 80 Micro; also, we published a New Product announcement about their Xealibur board in our January 1985 issue.

Send your correspondence to Input, 80 Micro, 80 Pine St., Peterborough, NH 03458.

Check these features:

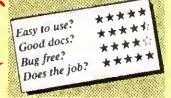

Talker 2.0 and Talker 4.0 software:

- Unlimited translation of English text to clear speech.
- Powerful video or keyboard echo can be switched on or off at any time.
- Can be used in BASIC with 2 new commands: PRINT* "I can talk" speaks any expression. PRINT! "Hello" speaks and prints on screen.
- M Reads numbers up to 999 trillion.
- Speaks many abbreviations, such as Mrs., Mr., Ib., oz., Co., etc.
- Walks the dog.
- Many control codes to tailor the system to your wishes. (Pitch, speed, etc.)
- ☑ Only 6¼K long.
- memory. Compatible with any DOS (not CPM).

The VS-100 hardware:

- Same performance as very expensive units.
- Super efficient: About 50 bytes per sentence.
- Handsome speaker module included.
- ☑ Detailed 48 page manual.
- Ready to plug in and talk right away.
- ☑ Uses the famous Votrax SC-01 with 4 pitch levels and automatic inflection.
- Built in audio amplifier with volume control.

See the detailed eview in 80-Micre December 1984.

• My 16K Model I has served me well until recently. Now, whenever I type in characters or the computer displays messages on the screen, the letters O-Z and numerals 0-9 appear as A-N and uppercase symbols. The letters exems to recognize the correct letters even though they're wrong on the screen. In fact, the command PRINT "ABCDEFGHIJKLMNOPQRSTU VWXYZ" gives me the correct letters. Can you suggest where to start trouble-shooting? (John Maikisch, Morris Plains, NJ)

♠ My first instinct is to say that ♠ your video display chip has gone bad and needs to be replaced, or that one of the character generator output lines is flaky. Beyond that I can't help. I suggest you take the unit to a Radio Shack computer repair center.

•I own a 4K Model III. Because of the cost, it's foolish to buy an upgrade from Radio Shack. Is there a financially sensible way to upgrade to a fancier level with more memory? (Bob Amis, Hopkinsville, KY)

Yes, it's easy to do your own upgrade. First, call Radio Shack's National Parts Division (817-870-5662) and order the appropriate technical manual. Then buy three eight-chip sets of 16K RAM-one chip is 16K by 1 bit, so eight chips give you 16K by 8 bits. Unplug your computer and remove the top according to the technical manual's disassembly instructions. Remove the bank of 4K chips and replace them with the 16K chips, then fill the 32 empty sockets beside them with the remaining 16K chips. The technical manual has diagrams of memory chip positions. Make sure you've inserted all chips properly, with the notches lined up in the right direction. Reassemble the computer and check memory size. If it's only 32K or 16K, you may have a bad chip.

Through trial and error, you'll get a full system. Now, get a Level II ROM chip from National Parts. To install the chip, you'll need the full installation instruction package. Disk drives and an RS-232 board are just as easy to add. You can order them from National Parts or from other companies that sell Model III upgrade kits. By doing the upgrade yourself, you should save several hundred dollars.

 I have an answer to Rodney Mag-•lente's question about saving long programs with Radio Shack's Series I Editor/Assembler (January 1985, p. 18). He should change the byte at 4AEA hexadecimal (hex) from 00 to FF hex. The editor/assembler's Save routine uses the BC register to count the lines saved. The program enters this routine with BC containing 00D3 hex (211 decimal). The patch changes this to FFD3 hex, which lets you store as many lines of source code as you'll ever be able to fit in memory and assemble. I used Howe Software's Monitor #3 to make the patch and write the modified program to tape. I lost count of the hours I spent solving this problem, but the effort was worth it. I have some source programs that take eight to 10 minutes to load. Be forewarned that saving lengthy source code requires long, good tapes. (Merritt H. Derr, Inman, SC)

A • Thanks for the information. See • Greg Wolking's letter below for a method that doesn't require a monitor program.

Solving Rodney Malgente's problem involves changing only 1 byte in the Series I Editor/Assembler program, but you need a high-memory monitor to make the fix permanent. If you don't have a monitor program, use the System command to load EDTASM. When the *? prompt appears, type in/181 and press the enter key. This returns you to the memory size prompt; type in 17980, which protects the editor/assembler from Basic. Now type in POKE 19177,14 to fix the file length problem. Type in SYSTEM. Answer the *? prompt with/19434 to start the program.

It's wise to PEEK address 19177 to make sure you have the same EDTASM version; the result of the PEEK should be 6. Otherwise, you'll have to look elsewhere to solve the problem.

You must follow these steps every time you load EDTASM. Note that the procedure doesn't affect the L command since EDTASM loads the entire file at once, no matter how long it is. Also, it's especially important to save your files more than once. The longer the file, the greater the chance of losing a byte or two. It takes only one bad byte to trash an entire file, and as yet I know of no way to repair a bad cassette file.

Note that there's no problem with the length of object files as long as you have enough RAM to assemble the program. (Greg Wolking, Orlando, FL)

A Thanks for your solution.

•I own a 128K Model 4P. When I invoke the MEM command, the computer replies with 29,992. What happens to my other 64K of memory? Do you know of a way I can see all of my 128K? (Robert Manis, Hilton Head Island, SC)

• The extra RAM is there, but it's available only as a RAMdisk. There's no way to have 128K of contiguous RAM on the 4P, not in DOS and not In Basic. Microsoft's Basic can address only 64K of contiguous memory, including the space Basic occupies.

But don't feel put out by that; the IBM PC, with up to 512K of RAM, is stuck with the same Basic RAM limitation as your Model 4P. And your 4P cost a lot less than the IBM.

Newclock-80 \$69.95

The right time at the right price! Keep the time and date with quartz accuracy, even when your computer is off. The backup lithium battery (included) will last for over 2 years. Software on tape or disk, please specify. Use "TIMESET" once to set the clock. Use "SETCLK" to set your computer's internal clock (at power up) or use "TSTRING" so that the "TIME\$" function reads the Newclock. Connection: Model I: plugs into the keyboard or expansion interface. Model III; plugs into the 50-pin I/O bus. Compatible with all operating systems.

Printswitch \$59.00

Do you have 2 printers? Get a Printswitch. Stop plugging and unplugging those printer cables. With the Printswitch, you can have 2 printers connected to your computer and you can select either one at the flick of a switch. Works with any printer, plotter, or device that uses the parallel printer port. Simply plug the 14 inch Printswitch cable into your computer, and plug your existing printer cables into the Printswitch. This is the nicest unit on the market. Superior quality board with gold plated edge connectors. For Models 1,111, 4 and 4P.

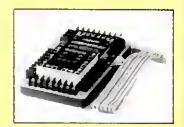

Alpha Joystick \$27.95

When it's time for fun, don't be without your Alpha Joystick. Do you know that most action games are Joystick compatible? Stop pounding on your keyboard and enjoy real arcade control. The joystick can also be used with BASIC programs; simply do J=INP(0) to read the joystick position (8 directions and fire button). Model I: plugs into keyboard or expansion interface. Model III. 4 and 4P; plugs into 50-pin I/O bus. The Alpha Joystick comes fully assembled and tested ready to plug in and enjoy. (Specify Model I, or Model III.4).

Interfacer-80 \$159.00

Low cost input and output device. The outputs consist of 8 relays (rated 2 Amp@125V), easily controlled using "OUT" commands. For example, OUT 0,0 turns all the relays off. Eight LED's show the states of the relays. The 8 inputs are optically isolated, so it's safe and easy to connect external devices (switches, sensors, thermostats, etc.). Simple "INP" commands read the inputs. Connection: Mod I: 40 pin bus. Mod III, 4, 4P: requires 50-pin I/O bus converter (\$39.95), plugs into 50-oin I/O bus. Comes complete with power supply, cable, and detailed manual. (Up to 8 interfacers can be connected to your TRS-80 using our Y- cables).

Analog-80 \$139.00 8 channel 8 bit Analog to Digital converter. Your TRS-80 can read voltages. temperatures, pressures, light levels, etc. • Input range: 0 to 5.1 Volts. • Resolution: 20mV. • Conversion time: 120 microseconds. In BASIC, you can take up to 100 readings per second. • Port address: selectable. Up to 8 Analog-80's can be connected to your TRS-80 for a total of 64 channels! Connection Model f. 40 pin I/O bus. Model III, 4, 4P: requires 50-pin bus adapter (\$39.95). Comes complete with power supply, cable, and manual.

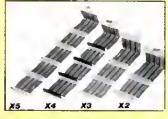

Special Cables

Disk drive extender cable (8")...C180:\$9.95

Y-Cable for Mod I bus (40 pin): • x2-40...\$29 • x3-40...\$44 • x4...\$59 • x5..\$74 Y-Cable for Mod 3 & 4 bus (50-pin): •x2-50...\$34 •x3-50...\$49 •x4-50..\$64 Disk drive cable (34 pin): • 2-drive...C162:\$32 • 4-drive...C163:\$45 Extension cable, 4 loot: For printer and drive (34-pin)...C165:\$22

FEEDBACK LOOP / by Terry Kepner

Some programs take advantage of the extra 64K bank of memory, but most machine-language and Basic programs restrict themselves to using the extra RAM as a RAMdisk.

expensive version, on my Model III with a Radio Shack DMP-200, a smart printer that supports many typefaces. From Basic, I can change print styles, but in Scripsit I'm stuck with the modes in effect when I load the word processor. How can I get bold and other typefaces from Scripsit? (Ralph H. Turner, Oberlin, OH)

• l know of several programs or e patches to modify disk Scripsit to use the DMP-200's special features, but I find nothing for cassette Scripsii. Can anyone else help?

• I have a suggestion for Chris Seigler, who was looking for an accounts receivable program for a dual-drive Model III (December 1984, p. 18). He needed a balance-forward program that could handle 1,500 accounts with an average of five entries per month. You said he'd need a hard disk drive to handle that many accounts. I think H.D.P.'s program is what Chris wants. It handles up to 5,000 accounts and 15,000 transactions on floppy disks with a split disk feature. I've been using this program for several years and find it consistent and concise.

An advertisement for the program appears on p. 197 of the December 80 Micro. You can reach H.D.P. at 2366 Lincoln, Oroville, CA 95965, 916-533-5992. (George M. Blankenship, Matewan, WV)

A • With all the advertisements in all • the magazines I read each month, sometimes I miss a few. Thanks for the suggestion.

• Like Chuck Fullgraf, I had trouble converting my Model I to operate with a double-sided disk drive (January 1985, p. 18). To condense weeks of disappointments, here's what happened.

Micro Systems Software's technical department told me DOSPLUS 3.5 could not support double-sided operation on drive zero due to the Model I's hardware limitations. They told me that drives other than zero can be double-sided, and said the problem was probably in the drive cable.

Aerocomp was more specific. They told me that Radio Shack's programmed drive cable uses plu 32 to control drive 3, so plu 32 is missing from the cable edge card connector on drives 1 and 2. Tandon uses plu 32 to tell a drive it's

supposed to be double-sided. I made a new cable with pln 32 on drive 1. This gives me satisfactory results with a single-sided drive zero and a double-sided drive 1. If there's a way to get double-sided operation on drive zero, I'd like to know about it. Also, is the terminator's correct location on the final drive, or on drive zero? My computer seems to work equally well both wsys. (Oscar A. Hevia, Tampa, FL)

• The terminator resistor can be eanywhere on a four-drive system, as long as one and only one drive has the resistor pack. Tandon prefers that the pack be in drive 1, while Radio Shack, the last I heard, prefers that it be in drive zero. For more advice on double-sided disk drive operation, read on.

• 1 had problems similar to Chuck • Fullgraf's when I upgraded to double-sided disk drives. 1 went to the nearest Radio Shack and bought a normal 34-pin edge card connector to replace the one with the missing pins. Another solution is to make a new cable with two new ends.

Once you've installed the new cable, configure the drives using the DIP (dual in-line package) switches, or jumpers, as internal 0.1 and/or 0.1 external. However, if you do this to the external drive, TRSDOS 6.1 or 1.3 won't acknowledge that drive. Another of life's mysteries.

Be aware that the Model III/4's drives are configured as 0,1 internal and 0,1 external. Radio Shack chose to make the external connector on the disk controller's PC board the same as the internal pin out. If you set the external drives' DIP switches to 2,3, they won't work properly. (Mel Patrick, Surrey, BC)

Thanks for the warnings about the external drives' DIP switch settings, but what do you mean TRSDOS won't acknowledge the external drive? All you have to do is use the System command to tell the DOS that you installed an external drive.

Regarding Chuck Fullgraf's questions: I've made some discoveries about double-sided disk drive operation using DOSPLUS 3.5. If you have one drive,

the only way to get double-sided operation is to have the DOS already on a double-sided disk. For the format utility to work correctly with only one drive, you must still have the terminating resistor in place. On the other hand, on a dual-drive computer, you must remove both resistors.

You can't use the back-up utility to back up a single-sided disk to a double-sided disk or vice versa. I haven't been able io back up a double-sided disk that has the complete DOS on it.

I've used the following method to back up DOSPLUS 3.5 from a single-sided disk to a double-sided disk, or from double-sided to double-sided: Put a singlesided DOS disk in drive zero, and load the format utility. At the prompt, put the destination disk in drive 1 and format it using the Sides = 2 parameter. Use SYS-GEN to copy system files to the back-up disk. To copy the remaining files, use the command COPY !:0 :1,I,E,SP = "PASS-WORD",D = "PASSWORD", If you need only a few of the files, copy them one at a time; don't forget the file password where necessary. This disk boots up as a double-sided disk in drive zero, but you must create a configuration file using the Save command to configure both drives on boot-up. You can also use the I, Mount command, when you have disks in both drives, to set the drive to the disks' format. (Joseph Conte, New Hyde Park, NY)

A • Thanks for writing. We all appreciate it when someone explains how he managed to do what Radio Shack calls impossible.

• In the January 1985 Feedback
•Loop (p. 18), Gerald Crosby asked
for a patch to resolve a conflict between
the Model 4's click filter and SuperScripsit. I have such a patch (see the Program Listing); it works with TRSDOS 6.2
only, however.

The problem with the pre-6.2 filter is that it's poorly written and that Super-Scripsit accesses the keyboard via a proprietary @CTL supervisor call (SVC). The filter doesn't check what type of request (@GET, @PUT, or @CTL) has entered the filter. After @CHNIOing to the keyboard driver, it checks only whether the zero fiag is set. If so, it produces a

Program Listing. Patch to correct the Model 4's click filter with Super-Scripslt under TRSDOS 6.2.

```
.Click/Fix
.Modified 6.2 Click/FLT to work with SuperScripsit and *DO
.Change C9 (return) to BC (CP H)
```

.This usually results in a C, NZ condition

.D00,93=BC .F00,93=C9

.Apply patch to Click/FLT.FILTER .End of patch

FEEDBACK LOOP

click. The @CTL #255 function call that SuperScripsit uses returns the 8-byte image of the keyboard RAM starting at the address indicated by the IY register's entry value. This call is always CHNIO'd to the driver and always returns zero. Therefore, the filter produces a click whether or not you press a key.

n 100

Tandy rewrote the click filter for TRSDOS 6.2. This time, the filter screens the primitive and processes it properly. It returns @PUTs to the calling program without CHNIOing to the driver; it CHNIO's @CTL and returns it, and CHNIO's @GETs (@KBD, @KEY, and @KEYIN) and screens them on return for the zero flag. If the flag is set, the filter makes a click.

The patch changes the return byte that @PUT and @CTL use to a CP H. On return from a @CTL #255, H = F4 hex, so it's an extremely rare event that A, which holds the last keyboard RAM byte's image, would be equal to or greater than H. The CP H thus creates the nonzero, carry conditions which are the entry flags for a @GET primitive.

So, on return from the @CTL # 255 venture into the keyboard driver, instead of returning to the caller, the computer resets the zero flag, sets the carry flag, and drops control down into the filter's code that handles @GET requests. When SuperScripsit sends its @CTL to the keyboard with the elick filter installed, the filter processes the @CTL and then a @GET primitive. If you haven't pressed a key since the last call. @GET returns a nonzero and the filter doesn't click. The probability of the @GET call's masking a new key press from the @CTL call is extremely small. (Mike Zarowitz, St. Paul, MN)

A Great detective work. Thanks for the patch.

emy Models I and III to CP/M. In the December 1983 80 Micro (p. 122), you reviewed three Model III kits. My objective is to convert both computers so they can run the same software and read the same files, as well as run their respective TRSDOS programs. I'd also like to expand to 128K if it's practical. Am I dreaming? If not, which kits would accomplish what I want and which would you recommend. Also, can I convert a Color Computer to CP/M to spread the compatibility three ways? (Fred B. Crigler, Roswell, GA)

Yes, it's possible to convert both computers to CP/M so that they'll run the same CP/M software. You can convert a Model I by setting it up as a 48K or as a 64K system. However, the 48K configuration causes problems. Because of a conflict with the Model I/III

ROM/RAM, you have to alter CP/M to start at 4000 hex. This gives you a non-standard version incapable of running about 90 percent of the CP/M software on the market.

The second conversion method requires a hardware modification that leta you switch RAM into the logical positions that the ROM occupies, making the computer into a 64K machine. This way, you can run standard CP/M and all available software. The Model 1 hardware modification is tricky because of close tolerances inside the keyboard case. As I explained in my article, the Model III conversion isn't that difficult.

Model I CP/M kits are available from Microhatch (P.O. Box 501, DeWitt, NY 13214) and from Holmes Engineering (3555 S. 3200 W., Salt Lake City, UT 84119). You'll also have to upgrade your Model I disk drives to double-density operation before you can swap disks with your Model III, unless you restrict Model III disks to single-density. As for getting 128K of RAM, you can't actually address more than 64K with Z80 CP/M.

You might be able to get a Color Computer CP/M card from Wayne Technology (P.O. Box 5196, Anaheim, CA 92804), even though they've discontinued the product, or from Color Power Unlimited (1260 Springfield Ave., P.O. Box 606F, New Providence, NJ 07974). Both units require an external 80-column by 24-line display monitor. Both also use double-density disks and require a 64K Color Computer.

• I believe owners of cassette-based • Model III's would find my method of handling Basic data files, which I've called TBase, interesting.

TBase is a set of 19 Assembly-language subroutines for conveniently using the Model III 1,500-baud cassette interface to store and retrieve data files for Basic programs, much as disk Basic uses ASCII data files. It takes only 27 bytes of data statements to let any Basic program load TBase via a programmed System statement. TBase data files are in cassette Scripsit format, so you can use Scripsit's full-screen capabilities to create or edit them. However, Scripsit isn't necessary; Basic programs using TBase can create, modify, and display their own data files.

A TBase data file is a relational data base. That is, it consists of numbers and strings logically arranged in related rows and columns. TBase accepts more than one data file at a time, limited only by installed memory. The tape input/output routine provides for multiple copies, verification, and tape-off delay, to avoid capstan damage to the end of a tape file.

TBase enables the CVI function unused in cassette Basic. This makes it

easy to transfer data recorda between TBase's text buffer and Basic variables. TBase can sort any nested set of fields of a data file, using a fast vectored shell algorithm. TBase functions delete and insert records in any data file, or delete an entire data file while retaining all other files in memory. A search function finds the first, or next, record in a data file that matches a profile based on one or more fields, such as "Find John Brown's telephone number."

I'm placing TBase in the public domain for the benefit of 80 Micro readers, Interested readers should send me \$15 to cover the cost of reproducing TBase's documentation and assembled source listing, preparing a C-90 cassette with the five modules of editor/assembler source text and assembled system file, and mailing them. (David B. Dillon, 16533 Baederwood Lane, Derwood, MD 20855.)

A • Sounds like a great deal for owners of cassette-based computers.

In your answer to Daniel E. Roth's letter (May 1985, p. 14), you said you'd been unable to find a third-party source of printwheels for any Radio Shack daisy-wheel printers. Your readers might be interested to know that Quill Corp., a mail-order office supply company, has seven standard printwheels in 10, 12, and 15 pitch and proportional apacing for the Daisy Wheel II and DW-410 printers.

I've bought most of my printwheels and ribbons from Quill and can vouch for their excellent service and prices. Their address is 100 S. Schelter Road, P.O. Box 4700, Lincolnshire, IL 60197. (Ron Lee, Severna Park, MD)

• I knew Quill sold ribbons for the • Daisy Wheel, but I didn't know about the print wheels. Thanks for the information.

Guggenheim's request for help in converting his Level I game cassettes to Level II for use on his Model III (May 1985, p. 17). Even if he finds copies of Radio Shack's conversion programs, they won't work with his Model III. I've revised the originals to work with the Model III, and would be happy to supply copies to Mr. Guggenheim or to anyone else who could use them; please send a blank cassette and return postage. (Paul F. Barnett, 19 Wilshire Blvd. E., Lousiville, KY 40214)

A: Thanks for the offer.

Easy to Use!

A touch of the keyboard opens a window in your screen fora Note Pad, an Appointment Calendar, a Calculator, even a Mini Data Base. All yours for just \$49! Need RAM? Monte's Christmas gift to you – 64K and the window, both for \$99!

Once Upon A Time,

Monte Zuma, our Founder, President and King, has always had trouble keeping his desk organized. The Sidekick™ from Borland International would solve the problem, but alas, it was not available for CP/M®. So Monte asked his favorite nephew, the legendary LaMont E. Zuma (distant cousin to Rondo Talbot, a direct descendant of Monte Zuma hisselt) to work on the problem as best he could during recess at the home. LaMont, a true legend in his own time, really outdid himself this time. A touch of both shift keys halts your application program in its tracks and up pops Monte's Window™ ready to use. What could be simpler? Put an end to the fumbling and pawing around the pile of papers on your desk. You will find Monte's Window™ indispensable. When you are finished, break back to your application program and it resumes without error. Monte's Window™ is truly a breakthrough. See for yourself – Look through Monte's Window™ on your Model 4. How did you ever get along without it? See the page opposite for order information. Monte's Window™ is available right now.

CP/M...The Software Key That Unlocks Your Model 4

CP/M is the standard 8-bit Z-80 operating system and many thousands of programs have been written to run under this system. With Montezuma Micro's CP/M you can run these programs on your Model 4/4P. Think about all those nationally known programs you've wanted to use. Programs like WordStar, dBASE II; SuperCalc; MultiPlan etc. With our version of CP/M 2.2 all those public domain programs on bulletin boards across the USA are available for free downloading. CP/M is the missing link that joins all this software to your Model 4/4P. Montezuma Micro's CP/M comes ready to use end requires no hardware modifications. This product has been awarded the best and highest ratings in the reviews end we are continuously improving it with you in mind. With our CP/M you get more than just a DOS. You get the other half of your Model 4/4P.

AVAILABLE NOW FOR IMMEDIATE SHIPMENT – Less Hard Disk Drive Support......\$169

'WE KEEP YOU RUNNING''

The PRODUCER
Winner of

FIVE STARS

in 80 MICRO Magazine's

Software Review

January 1985
The PRODUCER gained this perfect rating based on Ease of Use
Quality Documentation Freedom from Bugs
Ability to Do the Job

You can quickly create programs to manage such things as mail lists, personnel records, inventory control, catalogs, loan calculations, schedules, personal finances.

The only limit is your imagination!

THE PRODUCER CAN SAVE YOU MONEY! Why buy expensive data base programs that never quite do what you want. The PRODUCER can write all your data storage and retrieval programs for you -- quickly, easily, and to to your exact specifications investing in The PRODUCER is money saved over and over again.

THE PRODUCER CAN SAVE YOU ERUSTRATION! No more frustrating dependence on inadequate software that someone else packaged for mass consumer use. With The PRODUCER you can design and write custom software to meet your exact needs. You can become a programmer even though you have no previous programming experience. The PRODUCER helps you plan what you want and then writes all the code for you at the push of a button.

THE PRODUCER CAN SAVE YOU TIME! What formerly was impossible for novices, can now be done with ease. What formerly took professional programmers days and weeks, can now be accomplished in minutes. After a few hours going through The PRODUCER's easy to follow Tutorial, you will have an incredible time saving tool at your fingertips. Most PRODUCER users testify that they can create complete programs from start to finish in as little as fifteen minutes. You will soon be wondering how you could ever have done without The PRODUCER.

Professional Program Writer

Beginners can program with no experience necessary.

Professional programmers can save days and weeks of time.

WITH THE PRODUCER YOU CAN ENJOY THESE OUTSTANDING FEATURES

- An easy-to follow tutorial that takes you step by step through The PRODUCER process It's all you need to get started and even lets you create an actual program as you learn.
- The best screen generator available anywhere. You have full screen control including graphics. You can add, insert, delete and move blocks of text on screen or between screens.
- Full support for all math functions, including subtotals and global calculations.
- A B-Tree file structure, that gives extremely fast access to data, allows global search and replace, data entry by batch mode and automatic file rebuilding
- The Freeform Report Generator provides amazing versatility to design text placement, interfield calculations and formats. You can even print reports on your standard forms
- Full editing control at all times. You can easily edit and refine at any point, including the finished program, without having to start over. That's a feature not tound on other products. The screen generator lets you experiment, rearrange. "cut and paste" between trial screens and change your mind any time you wish
- A fully indexed reference manual of over 200 pages gives you complete technical support at your finger tips. You may never need to read it, but it is all there just in case.
- Outstanding technical support. Your PRODUCER package comes with four Iree issues of The PRODUCER quarterly newsletter. And should you ever need direct technical assistance, you may call a Producer Software technician for Iree counsel and trouble shooting.
- No payment of royalties. That's right. Provided you give proper credit, you may self PRODUCER generated programs without paying royalties. Finished programs do not need the original PRODUCER system disk to run, so they are easy to duplicate and distribute. The PRODUCER can put you into the programming business for friends and associates.

"The longer I used the Producer, the more impressed I was. After only one month, it had found a place among my most often used software."

Hardin Brothers Reviewer, 80 Micro

"The Producer is an excellent package, capable of doing everything I wanted it to.

Hardin Brothers
Beviewer, 80 Micro

"The Producer will allow you to develop a data hase program in a couple of hours that would take mooths to program and debug by hand."

Chartes Knight Reviewer, Basic Computing

"The Producer is certainly one of the better buys in today's software marketplace."

Charles Knight Reviewer, Basic Computing

IBM's Loss Tandy's Gain?

Hot Items

With epring came the news that IBM would stop production of its PCjr in April. Ironically, the jr had just come off its best sales period since its introduction a year and a half ago. Fourth-quarter sales totaled 200,000 units; sales for all of 1984 were only 250,000.

The jr was burdened with flaws from the start. You had to aim its notorious infra-red keyboard, which operated remotely, directly at the CPU box for it to work. Its original Chiclet-style keyboard was a laughing-

stock. Memory size limitations, a slow processor, a single disk drive, incompatibilities with the PC, and the complete system's high price all contributed to the jr's decline and fall.

IBM did flx some of their blunders. They improved the keyboard, increased the amount of memory Basic could access, and speeded up the microprocessor. But the stigma of failure remained until IBM cut the jr's price by \$1,000—to \$995—late in 1984, just in time for Christmas. Suddenly, people started buying jrs. Then in February 1985, IBM took the fatal step of raising the jr's price back to \$1,400. The sales boom stopped cold. A month later, jr was gone.

Don't expect IBM to stay out of the home computer market for long, however. William Ablondi of Future Computing Inc. looks for a new machine, priced at about \$1,000, in 1985's third quarter.

Meanwhile, Tandy has a golden opportunity to cash in on IBM's misfortune. The Tandy 1000 now lacks a serious rival among low- to mid-range MS-DOS computers. IBM's first big failure may, in fact, enhance Tandy's first big success in the MS-DOS mainstream.

Update

"Who'll give me \$500 for this little gem of a computer? How about \$300?

C'mon, this baby once retailed for \$1,195."

"I'll take 150 of 'em for \$125 a piece."
"Sold!"

It was a painful end for Convergent Technologies' Workslate as the last 6,000 units went on the auction block at fire-sale prices.

Introduced in August 1983, the Workslate was an early competitor of Radio Shack's Model 100 briefcase computer. But Convergent ran into trouble manufacturing and marketing the machine and stopped producing it last summer, at an \$8.5 million loss.

The auction raised some badly needed cash for Convergent. Auctioneer Ross Dove had hoped to get \$150 to \$200 per computer, but he didn't quite make his goal. Nonetheless, the sale took in about a million dollars, and Convergent called it a success.

Tandyland

Thie is one of those good news, bad news stories. Tandy's share of the home computer market dropped from 8 percent in 1983 to 7 percent in 1984. That's the bad news. The good news is that the industry-wide factory value of shipments for all home computers rose by \$800 million from 1983 to 1984. So Tandy made more money. Tandy executives have always claimed that market

share isn't especially important to them; they say it's the bottom line that counts.

At this point, though. Tandy's looking forward to a better start for fiscal 1986, which begins on July 1, 1985.

Recently, etock market investors have liked Tandy's prospects, too. While other high-tech stocks slumped this spring, Tandy became a market leader.

In late March, Martin Miller, a stock analyst for E.F. Hutton in New York, told me, "Tandy's stocks have been ahead of the mar-

ket over the last few weeks. In fact, Tandy's become a market favorite."

Mark Manson of Donaldson, Lufkin, and Jenerette Securities, echoed Miller's comments. "Tandy is one of the hottest stocks on the market," he said. "Since the first of the year, Tandy's gone from \$24 to \$34."

Neither analyst seemed to think the PCjr's exit from the home computer scene would significantly affect the performance of Tandy stock. Miller said it would be only a "modest positive." Because Tandy's stock has always moved in cycles. Miller said Tandy's benefit from decreased competition would be short term. Manson put it differently: "In the long run, the demise of the PCjr can only help Tandy, but they were doing very well anyway, even while the jr was still around."

Now that Tandy's 6000 has superseded the Tandy 16B, you might wonder what Tandy's doing with all those outof-date computers. It turns out the government's taking a lot of them off Tandy's hands.

The Army is buying 283 units, and has taken an option on 45 more. Since 16Bs cost about \$4,000 apiece, the deal could bring in almost \$1 million for Tandy. The Army will use the computers at Fort Stewart in Georgia and in West Germany to track supplies and equipment.

PULSE TRAIN

"There's no deal, ac conversation," said Ron Stegal, senior VP of Tandy's business products division. He was talking about rumors that Radio Shack Computer Centers might sell Ataris in the near future. Stegal told the San Jose Mercury News that Tandy wouldn't even consider selling Atari computers unless it had Atari all to itself.

How this rumor even got started is a mystery. Consider the two companies' sales strategies. Radio Shack sells only its own products or products to which it holds exclusive rights. Atari is a massmerchandiser that ahuns computer specialty stores.

James L. Copland, Atari's vice president of marketing, says his company's mission is, "selling to the masses, not to the classes." Though the two computer companies may compete for buyers in the same market, it's unlikely you'll see their products on the same shelf.

The Atari rumor wasn't the only one to reach 80 Micro this apring. There were rumblings on CompuServe and other sources about a new Tandy computer: an MS-DOS briefcase model to be called the Tandy 800.

According to the scuttlebutt, the computer will have one disk drive and a Fresnel lens filp-up screen. (Fresnel lenses, like those in lighthouses, use a series of concentric lenses to concentrate light.) When I asked Stewart Weinstock, Tandy's product manager for portable computers, about all this, he said he knew nothing about an MS-DOS portable about to come out.

Weinsteck, by the way, has some new responsibilities at Radio Shack. He's now product manager for the Model 4, replacing David Frager. Meanwhile, Frager, who also handled the Tandy 1000, is taking charge of Tandy's entire MS-DOS line: the 1000, 1200, and 2000.

I asked Weinstock if the move put any kind of a shadow on the Model 4's future. His comment was emphatic: "There is no intention to atop producing the Model 4. The product continues to be very successful and will continue for as long as it is selling."

Ed Juge, Radio Shack's director of market planning, adds that the Model 4 is selling especially well to schools. "The 8-bit machines we sell still have a long life ahead of them," said Juge. "We're even considering upgrades to the Model 4." When asked for details, neither Juge nor Weinstock would be specific, but I did learn that some of the 4's most popular add-ons might become standard equipment. Options Tandy's considering include an internal hard disk drive, double-aided disk drives, and the high-resolution graphics board.

Figure 2. Home computer sales in the last quarter of 1984.

MicroTrends

A report from Fature Compating inc. documents some important

changes in the home computer market over the last year or so. The report compares home computer sales in 1984's fourth quarter with sales in the final quarter of 1983.

First, sales were down. In 1983, consumers bought 2.2 million units. In 1984, the total was 1.7 million. Not all vendors felt the crunch equally, though. The big loser was Commodore, whose sales fell 12 percent. Radio Shack lost 8 percent and Texas Instruments, of course, dropped out of the market completely (see Figs. 1 and 2).

Apple's sales, however, jumped 17 percent. IBM gained 13 percent in the home market, attributable to the 200,000 PCjrs sold within the last three months of 1984 (see above).

Prices for home computers in 1984'a final quarter ranged from \$325 for an Atari to \$1,750 for an IBM. The dollar total was \$1.8 billion.

Future Computing says, "Consumers are buying computers as tools, not just as toys." Fifty-nine percent of the systems sold in 1984 had disk drives; 36 percent included printers. Other popular peripherals included joysticks, more memory, modems, and mice.

As the report makes apparent, games, graphica, and sound are not necessarily what home computer buyers are looking for anymore. Instead, they're turning to

higher-priced systems and applications software.

The premoters of Softcon, the big microcomputer software convention, can't claim their show is getting bigger every year. Attendance at the second annual Softcon, from March 31-April 3 in Atlanta, was down significantly. Last year's premiere show in New Orleans drew 550 vendors; this time, that number dropped to 250. Yet, the vendors didn't seem too disappointed. They fell the crowds were more interested in the exhibited products than last year.

Most products shown were for the IBM PC, and most of the remainder were for Apples. Only Ontario-based Gridsoft represented the TRS-80 market. And Gridsoft was there to announce versions of its football prediction program—for the PC and the Apple.

To attract people to the show, Softcon paid ABC's Ted Koppel \$25,000 to moderate a panel discussion on the future of software. The panel included John Sculley, president and CEO of Apple Computer, Inc., Mitch Kapor, chairman of Lotus Development Corp., industry analyst Esther Dyson, and Fred Gibbon, president of Software Publishing Corp. Unfortunately, Koppel steered the discussion away from the panel's area of expertise, business, asking inatead why anyone would need a home computer when most hardware is rusting, or "whatever discarded computers do," in America's closets.

The panelists said telecommunications would eventually make the computer a home necessity, while admitting the need for an easy-to-use interface for nontechnical computer users. None of this is particularly new; it simply underscores the problems the micro industry has had finding a place in the home. Koppel's question will remain unanswered until, as Mitch Kapor put it. "a key inventor, a Henry Ford, comes up with a way to make computers more accessible to everyday people."

The microcomputer ladastry acw has its own daily newspaper. This month, Ziff-Davis Publishing Co. is due to start up Computer Industry Daily (CID), an industry newspaper to be electronically distributed via MCl Mail.

According to Esther Dyson, editor of RELease 1.0. the industry newsletter bought by Ziff-Davis and converied to CID. "Our charter is to provide the computer industry with comprehensive, coherent coverage of breaking news here and worldwide, especially Japan." The six- to 12-page newspaper will also be printed at 18 U.S. locations for readers without modems or access to MCl mall.

A subscription will cost you \$1,500 a year, not including your phone or MCI bill.■

Graph Fix

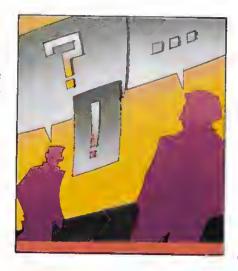

A number of readers have asked me how to get my Graph Master program (February 1985, p. 68) to work with printers other than the Radio Shack DMP-100 (previously called the LP-VII). The problem lies in the differences in printer control codes that create graphics on various printer models. The screen dump routine I used came from the article "LP VII Screen Printout" in the February 1983 80 Micro (p. 252). The article explains the workings of the routine and the DMP-100's control codes, so it should be of some help in converting the routine to work on your printer. As an alternative, though not perfect, solution, delete lines 890-1080 (Load 80 users should delete lines 3008-3045) and replace them with Program Listing 1. This screen dump routine uses only regular text characters, so it should work on any type of printer, even a daisy-wheel. The disadvantage is that the printed graphs don't look quite as nice as they do on the screen, and the vertical resolution is reduced.

> Arnold E. van Beverhoudt Jr. P.O. Box 56 St. Thomas, VI 00801

Driver Education

After buying Scripsit for my Model I, I was esger to use it with LDOS to take advantage of double-density format and my double-sided drives. Imagine my disappointment when my system rebooted if I tried to load or save files. Some detective work led me to the following solution, which I've written as a JCL (job control language) file:

. Although Scripsit works fine without KI/ DVR, you

- . must set the keyboard driver first if you're going to
- . use other drivers such as RDUBL.
- . Example:

SET *KI KI (T.J)

RDUBL

SYSTEM (DRIVE = 1, CYL = 40, STEP = 0)

Albert Schmitt, Jr. #2 Box 185 Westfield, WI 53964

Set Point

NovaCaic (January 1985, p. 82), is a good spreadsheet program; however, it doesn't align decimal points when line printing numeric values. To fix this, make the changes shown in Program Listing 2.

Howard Potvin 2527 Los Padres Drive Rowland Heights, CA 91748

Faster, Faster

It's often said that the Tandy 2000's video display is slow when you edit in Basic. Scott Trent's program (December 1984, p. 29) solves the problem on initial entry into Basic. But if you run a pro-

gram that uses graphics or color, the slow scrolling returns. I've modified his program to make it accessible at almost any time (see Program Listing 3). I converted the data statements to hard-coded POKEs and I renumbered the lines to begin at 65000. I saved the program as Fastlist/BAS in ASCII format. These three changes let me merge the routine with any existing program. Now whenever I want to speed up scrolling, I type in GOSUB 65000.

I've also added a Locate, 1 statement. This ensures that the cursor is on, since I run compiled Basic programs with the cursor turned off.

Edward R. Sargent 6431 W. 74 Ave. Arvada, CO 80003

Readers in Need

Does anyone know how to tell if an Epson MX-80/FT printer has the Graftrax + option installed?

Wayne P. Staats 1941 16th St. Cuyahoga Falls, OH 44223

I'm looking for a communications package for Holmes' VID-80 CP/M on a 64K Model III (in 80-column format). Also, does anyone have a screen dump program for the DMP-200 printer?

Roger Dessai 97 Stratton St. S. Piscataway, NJ 08854

I have a Model III with a Modem II running under LDOS. I use the computer mostly for data base management with Profile III HD. I'd like to write a Basic program to access my Profile customer file via modem. The Model III cassette Basic

manual has a simple Basic terminal program; Radio Shack says this will run under LDOS if I don't apply any filters or drivers. I disagree. Not only could I not make it work, but Logical Systems says it would be difficult to do. Can anyone help?

Gregory Cannon 876 Broadway New York, NY 10003

Error Trap

We published Program Listing 12 in "A La CRT" (March 1985, p. 58), but you might have had trouble finding it, since it's hidden inside Program Listing 11. Listing 11 ends with the line 19999 END. Listing 12 starts at line 20100.

-Eds.

The routine published under the heading "Student Special" in the May Reader Exchange (p. 27) contained a typographical error. Line 1030 should read:

1030 X2 = |XAND - 256/256 'HIGH BYTE)

—Eds.

The April 1985 Debug section (p. 27) contained corrections to my program,

Finder ("Basic Changes," November 1984, p. 56). The correction is incorrect. An Exclamation point is missing from the seventh line of the Figure. The line should read:

DEFM 'HI!' ; DUMMY MODULE NAME

ANYONE CAN USE OUR SOFTWARE!

MAIL PAC II FEATURES:

High Capacity --

Stores from one to one million names in Zip Code, Numerical or Alphabetical order. The only limitation is your disk storage space.

Prints your mailing list on 1, 2, 3, or 4-across labels (with up to 5 userdefined lines on each label) or as a compact, user-designed directory The record length is completely user-defined, and each field within each of your records is completely variable (allowing storage of any number of characters for any perticular address entry). Devote fields to telephone numbers, codes, or even special messages related to each particular name on file.

A built-in word processor allows you to create personalized form letters for each address on your list (or just a particular group of addresses).

Ease of Use --

Create new mailing lists, review existing lists, hendle changes of address, delete cancelled names, sort lists, and purge duplicate names from your files. Complete on-screen instructions tell you in plain english exactly how to accomplish all of these tasks.

MAIL PAC II.....\$99.95

MAIL PAC II and CHECKING PLUS represent a new generation of computer software. Our software doesn't even need a manual! Anyone can quickly learn to use either package by following simple, explicit on-screen instructions. But, for those of you who insist -- we've included a complete user's manual as well.

CHECKING PLUS FEATURES:

Complete Check Register --

Checking Plus stores your entire check register in a disk file, and then uses the deta to balance your eccount, track your expenses, and help you make budget projections. Review the entire checkbook, enter checks, deposits, fees and adjustments, mark outstanding checks when paid, and get an instant cash believe the support of project out in record form. onscreen or printed out in report form

Tax Preparation --

Storage of monthly and yearly totals and other important information aids in income tax preparation, for your personal use or for your

Handles the Details --

Store names end addresses for frequently written checks, then print checks to fit standard window envelopes, eliminating the need for extre typing. You can even store any comment, explanation or other message (up to 255 characters) related to a particular check

Automatic Monthly Bill Payments --

Enter amounts and names of payees for all of your fixed-cost monthly payments, and then sit back while the system automatically prints checks.

CHECKING PLUS \$99.95

Both Programs Require 48K And At Least One Disk Drive (2 Drives For Higher Storage Capacities). And All Hard Disk Systems Are Supported.

FREE-TRS-80 Mod LIII & 4 programs supplied on DosPlus (minimum system). Complete DosPlus also available.

This Year's Model: Tandy Intros the Model 200

by Terry Kepner

★★★★
The Tandy Model 200
comes with 24K of RAM, a 40column by 16-line display,
and built-in software for a
spreadsheet (Microsoft's Multiplan), calculator, Basic,
word processing, telecommunications, scheduling,
and address filing, Tandy/Radio Shack, One Tandy Center, Fort Worth, TX 76102.
\$999, \$249.95 for each additional 24K RAM module.

Tandy's introduction of the Model 200 reminds me of when the

Model Ill replaced the Model I: The Model 200 isn't so much a technological innovation as it is an upgrade of its predecessor, offering the same basic features with some real hardware and software improvements and a much better design.

The Hardware Differences

The Model 200 is almost exactly the same size as the Model 100 (8 1/4 inches deep by 11 5/8 inches wide by 2 1/8 inches high) except that it's slightly thicker. It weighs about the same, too (3 lbs., 13.5 ounces).

The Model 200's most obvious improvement over the 100 is in its liquid-crystal display: It shows a full 16 lines (the Model 100 has an eight-line display) integrated into a ftip-up lid that makes viewing easier. When closed, the lid protects both the keyboard and the screen.

The display is still only 40 characters wide, (the same large size as on the Model 100) but this means that all Basic and many machine-language programs can use the same display parameters.

You can adjust the plastic lid to either of two angles with positive lock action, in addition to the same display angle adjustment that the Model 100 uses. The

Photo 1. The Model 200.

combination provides a wide range of viewing angles and also prevents the lidslamming syndrome.

Because the display no longer takes up space on the computer's main panel, Tandy rearranged the arrow keys into a diamond-shaped cluster and moved the on/off switch to the top left-hand corner of the keyboard. The F1-F8 buttons now sit centered above the keyboard and the four dedicated function keys (Break/Pause, Paste, Label, and Print) are on the far left, just below the power switch.

The repositioned on/off switch can cause a slight problem. As with the Model 100, you can use Basic's Power CONT command to disable the 200's automatic power shutdown. This normally turns off the computer if you don't strike a key within a set period of time (anywhere from six seconds to 25 minutes). If you disable the automatic power-off and close the display with the computer on, it remains on until your batteries wear out. Since you can't see the display with the unit closed, you don't know whether it's on or off.

Tandy has also removed the TELCOM modern switch from the outside of the unit—you now select the modern's orig-

inate/answer mode with your communications software.

Tandy repositioned the connectors for internal and external peripherals. The input/output bus port went from inside the case to the back of the Model 200 as a 40-pin connector (see Photo 3). Also, the two new RAM expansion sockets are conveniently located under a small plastic cover on the underside of the unit, accessible to add or remove RAM memory modules without opening the case. The same compartment contains the socket for adding external

Tandy also redesigned the battery compartment. It still takes four AA batteries. but they're arranged as two

rows of two batteries each instead of four batteries side by side (see Photo 2). And you can now use rechargeable NiCad batteries (the Model 100 wouldn't accept some brands of NiCads because they didn't reach the connectors).

If you want to use NiCads in your 200, Radio Shack can modify it to use them exclusively. They'll set an internal switch that makes the AC power input recharge the NiCads. You can use NiCads until they need recharging and then plug the computer into its AC power supply and continue using it while recharging the batteries.

You have to make two trade-offs with NiCads: NiCads last only about 5 hours before you have to recharge them (which takes 15 hours), while alkaline batteries will last about 25 hours. And if you modify your unit for NiCads, you won't be able to keep regular batteries in the compartment when you plug the unit into an AC power supply.

The recharging could make them explode or split their sides and leak acid. You can still use regular batteries, but not in conjunction with the AC power supply. All the other ports (cassette, modem, RS-232C, bar code, and external

power) are the same as on the Model 100.

Memory

You can add two 24K memory modules to the Model 200. This is perhaps the most important difference between the two computers. The Model 100 had a maximum of 32K of RAM; the Model 200 has a maximum of 72K, organized as three 24K banks (the first is built-in).

The Model 200's (and 100's) central processing unit (CPU), the 80C85, can address a maximum of only 64K of RAM. Memory banking lets you substitute one 24K section of RAM for another, letting you transfer data from one bank to another using the internal registers of the CPU as temporary storage areas.

Unfortunately, you don't get to use the full 24K of each RAM bank, since the 200's ROM uses 5K as system RAM (for the LCD display, Basic variable pointers, keyboard buffer storage, menu map, and so on).

Any Model 100 programs that use ROM code routines won't work on the Model 200. Many machine-language programs for the Model 100 won't work for that reason.

You can expand the Model 200 ROM memory beyond 72K with a 32K ROM in the expansion ROM socket for a total of 104K. The expansion socket, like the ROM socket on the Model 100, does not accept standard 28-pin CMOS EPROMs (erasable programmable ROMs).

The Menu

The Model 200's function keys offer three new options from the main menu: Bank, Copy, and Kill. Bank swaps the different memory banks into position. Copy duplicates a file from one bank to one of the other two. And Kill removes a

file from RAM, with a verification prompt so you don't delete a file accidentally. You select which file to copy or kill by positioning the cursor over the file name, just as if you were selecting a file for Text, Basic, or MSPLAN. Also, when you put the cursor over a RAM file name, the bottom of the screen tells you the size of the file in bytes.

Built-In Software

In addition to the five built-in software packages that come with the Model 100 (Basic,

Photo 2. The Model 200's battery slot (left) takes two rows of botteries, and the 24K memory expansion modules are easy to put in place.

The Star Ratings

80 Micro's star ratings reflect our reviewer's impression of a product.

In most cases, the overall rating is an average of the ratings in each of the four specific categories. However, some overall ratings may be higher or lower than this average, depending on the reviewer's subjective opinion.

The stars mean:

Superior:

Excellent:

Good:

Fair:

Poor.

The ratings terms translate as follows: Easy to use: How easy is it for the new user to use the hardware/software/ book?

Good docs: Is the documentation clear and helpful in explaining the product's use and anticipating user problems? Bug free: Did the reviewer encounter any bugs while using the product? Does the job: How well does the product do what it was designed for?

Photo 3. Relocation of the expansion bus to the rear of the computer makes connecting peripherals easter.

Text. Telecommunications, Schedule, and Address), the 200 provides two new programs, Multiplan and Calculator.

Multiplan

Multiplan is Microsoft's spreadsheet with many of the program's abilities packed into the 200's 32K ROM. Its biggest limitation is its restrictive 99 rows and 63 columns. I can think of several applications where you'd need more columns (such as a yearly sales projection analyais with 104 columns, two per week).

Moving the cursor around in Multiplan is similar to doing so in Text; you use the arrow keys by themselves or in combination with the shift and control keys. You assign

spreadsheet control functions (such as cell width, cell format, cell names, etc.) to function keys F1-F8. Selecting a function key leads to a new subset of functions, also selected with the function keys. You use control-C to exit from the function-selection mode.

You can exchange Model 200 Multiplan files with those you create on desktop computers through the RS-232 port or a modem. This is convenient.

Calculator

Calculator is a simple four-function math calculator you can call up regardless of the program you're currently executing (even when you're on-line with TELCOM or working with Multiplan).

You invoke Calculator by pressing the NUM and GRPH keys. The word "Calculator" replaces the top line of the display on the right. Any number you type in appears on the left-hand side of that line. Pressing the plus, minus, divide, or multiply keys will put that symbol beside the word "Calculator" in front of the number you're currently working with.

The arithmetic symbol defines Calculator's next operation: a plus adds the next number you type in, and a minus subtracts it. To return to your previous program. press the GRPH key.

luvoking the calculator in TELCOM mode could cause problems. While TELCOM won't disconnect, the LCD won't acknowledge or display any incoming data.

The Model 200's Basic is identical to the Model 100's. except for two additional com-

REVIEWS

mands: POWER "hh:mm:ss", "mm/dd/yy", (file name), and VARPTR (file buffer). The Power command is a special alarm function; on the specified date and time, the 200 sounds an alarm and executes the indicated Basic program. You'll find this time-controlled, automatic operation useful for late-night automatic bulletin board system and electronic mail transmissions.

You can also use the alarm feature with the Note.DO file (in SCHEDL) to set up to 255 alarms, each displaying a one-line prompt when the alarm sounds.

The other new command, VARPTR (file buffer), gives you the starting memory address of the file buffer you specify for direct access to input data.

Basic programs that run on the Model 100 will run on the Model 200, except those that use ROM data. However, Model 100 programs can't use the 200's full 16-line display unless you modify them.

Text

While the 200's Text commands are the same as the Model 100's, the 200 offers a new List function and greater printing capabilities.

You can select a document's line length, left margin, page size, lines per page, and top margins. You can also control pagination for single-aheet paper or tractor-feed paper. Text may not be as fancy as Scripsit, but then again it requires no RAM.

One major improvement is the scroll feature on the larger screen. The Model 100 scroll was so slow it was painful; the 200's scroll is so fast you can't even read the file as it goes by.

The F4 key invokes the List function. List displays "records" that match a given character string. (List considers a record any text terminated with a carriage return: a word, a line, or a paragraph.) If you want to see each occurrence of a string, press F4 and type in the string. The 200 displays each occurrence of the string in a record. Press F3 for the next occurrence of the string, F4 to quit, or F8 to go back to the main menu.

Text still presents one major problem for people using non-Tandy printers: it doesn't send a line feed character with every carriage return. Tandy refuses to support their printer competitors. But someone will probably come up with a patch for this.

Telecommunications

TELCOM has some major improvements over its Model 100 brother. It still works through both the RS-232 port or a modem, in both direct and acoustic modes, but it offers four additional commands: You can select automatic line feed insertion with a carriage return,

originate or answer mode, tone or pulse dialing, and filtered ASCII character codes below 32 (except carriage return, line feed, tab, and XON/XOFF characters). TELCOM also has the ability to send a true break to host computers.

Schedule and Address

These two programs are essentially the same as their Model 100 counterparts, except that you can now edit files from within them. If you want to change something in a Note or Address file, you don't have to exit the program and go into Text. Just press the F4 button and you're there. When finished, press F8 to return to the menu, or press F4 to return to your called program (Schedule or Address).

Schedule, Address, and List are actually the same program with three names. The difference is that Schedule and Address can only use the files Note.DO and ADRS.DO, while you can use List with any text file.

Documentation

While the documentation for the Model 200 is better designed than that for the 100, overall it's harder to use and understand. Usually, Radio Shack improves their documentation when they upgrade a computer, but not this time.

The documentation comprises five small booklets: the Basic reference guide, the Multiplan manual, the TEL-COM manual, a quick-reference chart, and an owner's manual. Each manual comes in a 5½- by 8¼-inch spiral-bound booklet. The two references are smaller, measuring 6 by 4 inches.

The only good part of the documentation is the Basic reference, which is better organized and provides more detail on Basic operations than the Model 100 manual's section on Basic. While the manual lists commands for input/output with the rest of the Basic commands, it providea a table of device statements and functions organized according to the device used. For example, all the commands relating to input and output of RAM files appear under the RAM heading. Of course, some commands show up under more than one heading, but this one table has all the information on which commands go where. This is much easier to use than the Model 100 quick-reference booklet.

Unfortunately, the rest of the manuals and the other reference guide leave much to be desired. The Multiplan manual is poorly organized, although it does teach a novice how to use a spreadsheet. Its worst problem is that it doesn't have a command tree chart showing the relationship between the various functionkey commands and their subsets.

Also, the instructions for entering data into Multiplan are given in the owner's manual, while explanations, examples, and tutorials are in the Multiplan book. You can't just use the Multiplan booklet to get started. You must first read the pertinent section of the owner's manual, then switch to the Multiplan booklet.

I found the TELCOM manual especially difficult to use. You would expect to find details on how to set the RS-232 and modem parameters at the beginning. Instead, the first five chapters deal with subscribing and connecting to various public computer services. Before I log-on. I want to make sure the modem parameters are properly set.

The quick-reference guide is actually a reference guide to Multiplan commands and functions, with summaries of the other Model 200 application programs added for good measure. While the booklet comprises only 22 pages, 14 cover Multiplan commands.

The owner's manual gives you the information that doesn't fit into the other booklets: the I/O port information, physical data, how to get started in the different modes and with various peripherals. For beginners it presents just enough information to get you started and not a bit more.

The documentation's saving grace is the size of the manuals. They all fit in the pockets of Radio Shack's Model 100/200 Carry Bag. The only problem with the Carry Bag is that its security strap barely fits over the Model 200. If you don't have the Carry Bag, get it. You'll find it worth the money.

Summary

Like the Model 100, the Model 200 is perfect for the beginner. You don't have to spend hours learning how to use it before beginning any serious work. It's also perfect for field work, since you don't have to have an ac power supply or batteries the size of a small suitcase. The memory may not be as large as a desktop computer, but field notes or rough drafts don't require a lot of room. And the extra memory banks are a big help.

Which is the better buy, the Model 100 or the 200? The Model 100 is inexpensive, and the current availability of 64K RAM memory upgrades and spreadsheets in expansion ROMs give it a lot of capability. The only real advantage with the Model 200 is in its extensive built-in software and the larger screen. If you require a true break capability In TEL-COM, an extended alarm feature, or the larger 16-line diaplay, then the Model 200 may just be the machine for you. If the extra features aren't that Important, you might do better to upgrade a Model 100. The price will be about the same.

Picture this on a \$2,500 CAD program.

When Ultracam Incorporated set out to design the Ultracam™ K35, they knew that their design tool needed to be as professional as the camera they were designing. That's why they chose AutoCAD,™ the most widely used computer-aided design and drafting tool in the world today.

Mainframe CAD Capability at 5% of the Price

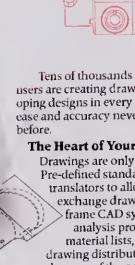

If you have an IBM PC, PC/XT, PC/AT, NEC, DEC, TI, Tandy, Wang, or one of over 30 desktop computers AutoCAD supports, you already own the most expensive part of a CAD system. Add AutoCAD for only \$2500 more, and you can have the power of CAD on your desktop at a price you can afford. With a pointing device and a ploner (the choice is yours, we support over 50 popular peripherals,) you can assemble a complete CAD workstation for less than \$10,000.

Once you've installed AutoCAD on your computer, you'll have a tool at your fingertips which removes the drudgery from designing.

Quick to Learn, Easy to Use

The beauty of AutoCAD is that you need no prior knowledge of computers. Even if you've never seen a CAD system, you'll pick it up in a matter of days, and feel comfortable within a week.

Simple pop-up menus point you in the right direction. You can also easily create your

own menus. On-line HELP keeps you on track.

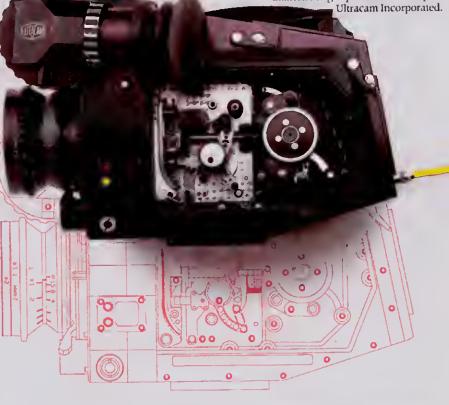

Sailboats, Landscapes, and **Custom Homes**

Since AutoCAD is general-purpose and user-customizable, it doesn't matter what type of drafting your work requires. neering (CAE) system. Whether you're in a two-person shop or a two-hillion dollar company, you'll find that AutoCAD pays for itself

in just a few months.

In the future, AutoCAD will run on newer, more powerful computers as they become available-so that you can be sure your investment in creating drawings and training staff won't he wasted.

COUNTERPOINT

How does the Model 200 stack up? Here are my impressions after a month of using one.

Text is still a simple cut-and-paste editor, but it's an improvement over Model 100 Text because you can set right margins and skip paper perforations when you print out. The 200's 16-line by 40-character screen is certainly easier on the eyes, though it's still smaller than a conventional display. Any major writing project will require a formatting program, such as WRITE+, for double-spacing, indenting, and so on.

The built-in TELCOM program, which more than adequately gets me onto MCl Mail and CompuServe, is now smart enough to disconnect when it loses the carrier. I can also exit TELCOM, kill a file or two, and reenter the program, all without having to log out from the remote computer.

Journalists who liked the Model 100 will love the 200. It's a natural for managers who need an occasional spreadsheet but who can't afford room for a desktop. And a student armed with a cassette recorder, WRITE +, and a small printer can bang out term papers more essily than with an Apple or IBM, since the 200 can go to the library.

Most of us wish that Tandy's new computer were IBM compatible with a bigger screen, a sort of half-price Data General One. But batteries to power several hundred kilobytes (at 16 bits each) weigh a lot. And have you ever tried to read one of those large-screen LCDs? I'll stick with the Model 200's 16-line by 40-column display, thank you.

-Carl Oppedahl

I was at first disappointed by the Model 200. The rumors of an 80-column LCD made the announced 40-column by 16-line screen an anticlimax. But now that I've tried it, my impression has changed.

My biggest problem with the Model 100 screen was its lack of continuity when reading text files. The 200's bigger screen does a good job of correcting this by displaying enough text to adequately review documents.

Other welcome features are the changed layout of the function and arrow keys, an on/off button above the keyboard, fully accessible RAM sockets, and the external bus relocated from the bottom of the computer to the back.

The Model 200 display time and scroll speed is almost three times as fast as the 100's because of the 200's much-improved video driver. But Text's select and paste functions are much slower.

Tandy added three additional parameters to the TELECOM STAT command: You can elect to ignore control codes 0–31, you can force line feeds with carriage returns for incoming data, and you can set the modem in originate or answer mode.

Radio Shack will modify the hardware of the 200 to use rechargeable batteries, which decreases the voltage level required to match the lower voltage output of NiCads. I've used NiCads with my Model 100 for over a year now without any kind of a modification. I tried a set of freshly charged NiCads in the 200. While they appear to work, I don't know how long a charge will last.

-Thomas L. Quindry

Since the Model 100 was introduced in the spring of 1983, portable computer users have been waiting for Tandy's upgrade to their popular laptop. After almost 2 years of anticipation, 1'm disappointed with the Tandy 200.

True, Tandy heeded the comments of Model 100 users. They added more memory and a larger screen, replaced the line of cursor keys with the cursor diamond, and fixed some of Text's deficiencies. But it still falls short of what I expected. The keyboard has a loose, clacky feel to it that makes it seem cheap. Even the rearranged function keys are more bother than an improvement.

My impressions of the Tandy 200 aren't all bad, though. Multiplan in ROM is a great addition to the 200's firmware. And the additional controls in TELCOM make it much more efficient.

Nonetheless, in a world that offers a wide variety of laptop computers, the Tandy 200 is not a standout in terms of advanced technology or expanded features. It is, however, a machine with a solid background. It offers standard and usable firmware at a price that beats all its competitors. It's just not very exciting when you consider the advances made in portable computers since the Model 100 came out two years ago.

-Bradford N. Dixon

PFS: File and Report Made For Each Other

by Mark Goodwin

PFS:File and **Report** runs on the Model 4/4P (64K). File requires one disk drive and Report requires two. Tandy/Radio Shack, One Tandy Center, Fort Worth, TX 76102. File is \$124.95. Report is \$99.95.

Easy to use: ***
Good does: **
Bug free: **
Does the job: **

hile Tandy markets PFS:File and Report as two separate packages, taken together they make for an impressive data base management system. File and Report support numerous advanced features, including full-screen data entry and editing, hard disk drive data storage, reformatting data base files, and printing complex reports, among others.

Running either File or Report is simple. Both automatically load many of TRS-DOS's system overlays into high memory, so neither requires an ancillary system disk. This greatly increases the amount of disk storage available for the data base files, and increases the system's execution speed during disk input/output.

PFS:File

You set up and maintain your data base with File. It presents you with a menu of seven options to design, add, copy, search/update, print, and remove records, and to exit the system.

Your first step is to design a file. As with other data base management programs, File breaks up every data base into individual records. It further splits these records into fields.

Unlike other programs, however. File doesn't require that you specify field length or type. Instead, you design a form for each record just by inserting the fields' headings at whatever position on the screen suits you. That's the advantage of a full-screen editor—you can permanently format a screen using the cursor to set up fields. And since File supports records of up to 32 pages, record length is virtually unlimited.

Once you design the record format, you enter information into the data base. Select the menu's Add option and enter the desired information. Besides entering information within the limits of the data base's form, File lets you dynamically add pages to a record's form without having to redesign it. This is analogous to stapling an extra piece of paper to a data sheet.

Once you add records, you can display

or edit them with the search/update mode. If you want to search or update only a few records (rather than the entire data base), you can select the records by partial string, wildcard string, numeric value, or relational combinations. Once you supply the search specifications, File retrieves each matching record one at a time. When File pulls a record, you can edit or delete it.

in addition to the search/update mode, File provides modes to copy, print, and remove records from the data base. Like search/update, you can perform these operations on either the entire data base or selected records. File's copy mode not only lets you copy records from the data base, but also permits copying the design of the data base's forms. This can be handy if you need to design a new form for another data base similar to one ou file.

If necessary, you can completely redesign a data base's record to delete fields that you seldom use or to add new ones that might become necessary in the future. A few restrictions limit redesign options: you may need two disk drives and you can rewrite records only in four-page increments. Also, redesigning a form can be time-consuming.

File's weakest feature is its Print mode, because it allows only printouts within the limits of the data base's form design. You can specify whether or not you want the field headings printed, which fields you want printed, and whether you want the fields printed on their own lines or on the same line as another field. While you can use the print mode for listing the data base's information and for simple tasks like printing mailing labels, it's inadequate for all but the most elementary tasks. The print mode's only good feature is that it can send the output to any TRSDOS device or to a disk file.

PFS:Report

Since File's print mode is so limited, you really need Report to complement it. Report generates complex printouts from records in File's data base. It prints the reports in a horizontal format with each field assigned its own column.

The first step in printing a report is to specify the records of interest. As with many of File's modes, you can print a report for either all the records or a few selected ones. You have to specify the report's title, the output device, the number of lines per page, and the page width.

The printout format Report uses is quite simple. Each report can contain up to 16 columns. Report can do a multilevel sort on the first two columns of each report, and you can sort columns either alphabetically or numerically. If you don't want a sorted report, you can leave the first two columns blank.

While Report sorts fairly fast, you can

The manuals present many clear-cut examples.

print unsorted reports much faster. Also, you must supply other information about the report's format: alphabetic columns, numeric columns, averaged columns, subtotaled columns, totaled columns, and page breaks.

Besides printing the information in a data base, Report allows up to three derived columns per report. A derived column is one that gets its data by performing specified calculation on other columns within the report.

You create a derived column by using a numeric formula on other columns within the report. When constructing a formula, Report allows the four basic math operations: addition, subtraction, multiplication, and division. Formulas are generally evaluated on a strictly left-to-right basis without regard for one operator having precedence over the other. But Report does permit the use of parentheses to manually specify precedence.

If you want to use certain report formats over again, you can save them to disk and later recall them. Normally, Report uses a field's heading as its report column heading. However, you can specify substitute report headings. As with report formats, you can save substitute report column headings on disk for future use.

Documentation

I found the File and Report manuals easy to understand and liberally illustrated. Also, the manuals present many clear-cut examples that quickly instruct you in all phases of operation. In addition to covering the data base management system, both manuals provide various appendixes: error messages, control keys, disk storage capacity, useful TRSDOS commands, and using the programs with a hard disk system. Both manuals are rounded out with adequate tables of contents and very detailed indexes.

Conclusions

File is a superior program for someone needing a data base management program for on-line data referencing. But it needs Report to produce truly useful printouts. As a combined system. File and Report deserve to be ranked as one of the best Model 4 programs available. While these programs were originally written for other computers, the authors used all of the Model 4's advanced capabilities in writing File and Report.

BEEP Boisters Basic by Hardin Brothers

BEEP runs on the Model 4/4P (64K) under TRSDOS 6.2 and requires one disk drive. Logical Systems Inc., 8970 N. 55th St., P.O. Box 23956, Milwaukee, WI 53223, 414-355-5454. \$49.

Easy to use: * * * * \phi
Good docs: * * * \phi
Bug free: * * \phi
Does the job: * * \phi
\$\phi\$

The version of Basic that came with the Model 4 was a shock. Many of the features that Model I/III owners had come to think of as a normal part of Basic were no longer available. Abbreviations weren't supported and it was more difficult to move and copy lines. BEEP (Basic Enhancement and Extension Package) adds these features to the Basic distributed with TRSDOS 6.2.

Installation and Use

BEEP adds 13 enhancements and extensions to Basic 01.01.00. First, you can abbreviate the most common Basic programming commands: also, you don't have to include spaces after these abbreviations.

The second set of BEEP enhancements are immediate keys which should feel familiar to Model I/III users. Any of six keys typed in as the first character of a Basic command line will take affect immediately (you don't have to press the enter key). The six immediate keys include the four arrows: the down-arrow lists the next line of a program; the uparrow lists the previous line; the left arrow lists the first line of a program; and the right arrow lists the last line.

The other two immediate keys, the period and comma, work the same way as they do in Model III TRSDOS. The period lists the current line, and the comma starts editing the current line.

BEEP also includes two commands found in only a few Model I/III Disk Basics. M moves a Basic line from one part of a program to another; C copies a line to another location in a program.

BEEP adds one additional enhancement to Basic that is not immediately obvious. It loads and saves tokenized programs more quickly.

My only complaint is that BEEP does not go far enough. I would have liked to see other abbreviations, labeling features, and Basic and DOS utilities. But, BEEP doesn't take up any extra room on your disk. BEEP is a welcome addition for Model 4 TRSDOS owners. ■

New from PowerSOFT® **Now Copy files From TRS-80** to PC/MS DOS or CPM and BACK with SuperCROSS/XT!

Did you just get a new Model 1000,1200, or PC? How about CP/M? Just get that? Now with SuperCROSS/XT you can COPY your files TO or FROM 70 different DOS formats direct disk to disk! You can also FORMAT an alien disk, display the DIRectory or KILL files. Fully MENU driven with plenty of on-line HELP available! Very easy to operate in today's computer environment, especially for non-

GREAT new features make SuperCROSS/XT the transfer system of

*"FOREIGN-TO-FOREIGN" file transfers for the first time!! No longer a two step operation! Setup two different DOS formats in two different drives ala SU+ for COPYing files back and forth.

*MASS FILE TRANSFERS! Now features a new TAG feature which allows you to "mark" any number of files for COPYing or KILLing!

*CONFIGURE for the DOS you COPY from most, for faster automatic startup time!

SKIP command for reading or writing a 40 track disk in an 80 track

PowerSOFT presents the state-of-the-art-file transfer program for use on the TRS-80! SuperCROSS/XT is designed to allow you to move DATA and program files freely between your own TRS-80 and DOS formats of other computers. You can now do this with SuperCROSS/ XT and your existing hardware, eliminating modems, wires, and terminal program transfers. SuperCROSS/XT runs as a /CMD file under your TRS-80 operating system and will allow you to COPY files back and forth between different operating systems. You may format on a foreign disk in your TRS-80 and COPY files to it that can be read by, for example a Model 1000, a KAYPRO or an IBM PC. Note that machine language programs, although transferable, will NOT run due to the difference in microprocessor chips used in the different machines.

You can copy BASIC, PASCAL, FORTRAN, C, or other high level language programs, and run them with little modification, unless they make extensive use of graphics, or have machine language calls. CNVBASIC/CMD, available separately, will make most of the syntax and spacing changes required for converting Model I/III BASIC programs for use on other systems. Data files, spreadsheet files, and text files can also be usefully moved between machines. If you use or have the same Visicale or Multiplan on the TRS-80, you can use the same files on other machines! These spreadsheet files are directly convertable to 123 and other calc-type programs. Of course, the combinations and possibilities are endless, and the flexibility is ALL there with Super-CROSS/XT!

DOS Formats Supported MS-DOS variations include MS-DOS 1.0, 2.0/2.1 single or double-sided (IBM and most compatibles), and Tandy 2000. CP/M variations include most well known single and doublesided formats including Tandy's 3.0+, Montezuma Micro 2.2 (all versided formats including Tandy's 3.0+, Montezuma Micro 2.2 (all versions), Holmes and 60 others including: ALTOS, CROMEMCO, DEC, EAGLE, EPSON, HP 125, CP/M 86, KAYPRO, LNW-80, LOBO MAX-80, MORROW, NEC, OSBORNE, OTRONA, SANYO, SUPERBRAIN, TELETEK, TELEVIDEO, TRS-80, LIFEBOAT/I, OMICRON/I, HOLMES/3, HURRICANE COMPACTOR/3, SHUFFLEBOARD/3, XEROX, ZENITH-HEATH, and 8" standard CRIM. YOU course double sided designs and standard control of the c CP/M. *Of course double-sided drives are required for reading DS disks. Use SS for transfers, if needed.

If you use another computer besides your TRS-80 at work or home-you need SuperCROSS/XT so call or write, but order today! Only \$99.95. Check, VISA/Mastercard or COD accepted. Please add \$3 for shipping/handling (\$2 additional for COD). Foreign orders please add \$10 for AIRMAIL

SuperCROSS/XT\$99.95 (Please specify Model I-DD/III, 4/4P, or MAX-80 version) CNVBASIC/CMD (CONVERT BASIC for Mod 1/111/4)\$29.95 Converts I/III BASIC programs for use on MS-DOS, CP/M, or Mod 4! If ordered WITH SuperCROSS get BOTH programs

You need to know two things about computer bulletin boards before you pick up your phone and start dialing away:

- 1. Hundreds of informative and entertaining BBSes are now available.
- 2. You could very well die before you find them.

The problem with accessing bulletin boards is that most BBS phone lists are outdated before the ink is dry. Many of the numbers listed aren't valid, or have been changed, or are wrong. And many boards are no longer operating.

More important, most lists don't teli you about each board's focus. Calling a BBS is often like going to a movie you've never heard of—you don't know what to expect. It might appeal to your interests, but chances are it won't.

To help you out, we surveyed the thousands of boards currently operating, and came up with a list of those we found most interesting and useful.

How to Pick a Board

The type of board you'll choose to frequent depends on your needs. BBSes fall into three general categories:

- Local boards. These are usually for the immediate community and often include want ads, local news, and general messages. Most are for computerists with all types of machines, and serve as an exchange for general computer-related information. Their advantages are that they can put you in touch with people in your area who have similar interests, and you won't get a big long-distance phone bill every month.
- System-specific boards. You'il find these mostly in larger urban areas with enough users of a particular microcomputer to support a board dedicated to their interests. These can range from simple message systems (like the Wilmington-80 BBS) to boards with extensive data base files (like the TCUG board in Washington, D.C.). If you don't live near such a board, the data

base files and technical expertise of other users can justify membership and the cost of a weekly call.

• Special-interest boards. These are devoted to a particular interest, often not computer-related, such as amateur radio or photography. They can also be for the employees of a particular company or users of a specific product. Many computer and software manufacturers have boards.

Now for Our Choices

After a two-week orgy of cailing somewhere around 500 BBScs, we chose to highlight the following systems. We could easily have called another 500, but we had to draw the line somewhere. We therefore recognize that we've most likely missed some good boards. If you have one you particularly recommend, let us know.

Our criteria for choosing a board were simple: Was it useful and did we enjoy it? You'll flud a range of BBSes in this list, from one-drive systems with limited data bases to large national boards with registration fees. Some provide highly useful information and programs, others are just for fun. Most have been around for a while, have friendly and cooperative sysops, and are easy to use. (While many of the boards use homebrew software, a number run with commercially available and public-domain programs; the Table provides a list of such software.)

Finally, on p. 41, you'll find a complete list of BBS numbers from around the country. If you don't like our choices, maybe you can find something there that's more to your taste.

by Bradford N. Dixon and Eric Maloney

80 takes a look at some of the more unique bulletin boards around and gives you the penultimate BBS guide, with over 1,850 listings.

On the Boards

Software System AMIS Atari. ABBS Apple. Bullet-80 TRS-80 Model I/III. A first generation system. CBBS Many systems. See CBBS Chicago in main text. TRS-80. Another older system. Commnet-80 General interest. Very difficult to use; we avoid them. Conference Tree Mostly TRS-80, although we ran across some IBM PC Con-Connection-80 FidoNet IBM PC. Started out as an experiment in packet-switching: users can send messages to other FidoNet boards. Forum-80 TRS-80 Model I/III. Another golden oldie. TRS-80. Based on the Radio Amateur Telecommunica-Greene Machine tions System (RATS). Original board in Atlanta is still running (404-972-7947). Kandy Shack Based on Greene Machine system. Headquarters is in Riverside, CA (714-354-8004). TBBS (The Bread TRS-80, MS-DOS, CP/M. Second-generation system. much more powerful than Bullet-80 or Forum-80. Origi-Board System) nally for TRS-80s, but many TBBS boards are general- or special-interest. Saturday Software's dirt-cheap TRS-80 system. Towne Crier RBBS IBM PC.

Table. Commercial and public-domain software for BBSes.

Astronomer's BBS

Titusville, FL 305-268-8576

Sysop: Not available. Hardware: IBM PC. Software: RBBS.

If you're serious about astronomy, this is the BBS for you. Its affiliations include the Coalition to Achieve Non-Detrimental Lighting (CANDL), the Central Florida Astronomical Society, the Southeast Region of the Astronomical League, the Independent Space Research Group, and the International Amateur/Professional Photoelectric Photometry Association.

The board features an extensive data base of astronomy-related programs and text files, as well as data bases for astrophotography; communications; math, science, englneering, and ham radio; finance, stocks, and management; graphics; Pascal; and variable stars and novae. Computer-related material is mostly for MS-DOS machines.

Bullet-80 Headquarters

Anahelm, CA 714-530-4765

Sysop: Joe Simon, Hardware: Model I with three drives. Software: Bullet-80.

Like Forum-80 (see below), Bullet-80 is a first-generation system that now seems a bit antiquated. Many Bullet-80 boards work on Model I's and Iils with limited storage, thus restricting the number of files available for downloading. What they lack in sheer power, though, they make up for in simplicity and ease of use. And just as important, they tend to be TRS-80 specific, which is rare in a world dominated by IBM and Apple. This is the original Bullet-80 system, up since 1978, and is run by the software's author, Joe Si-

mon. It includes a classified ads section (it features everything from CP/M cards to Mustangs to bullwhips), a message board, and a modest data base of TRS-80 programs (registration required; see Photo 1).

Bullet-80s have dwindled in number and don't provide the services of more recent systems. But if you're a I/III/4 owner and have one in your area, we recommend you check it out.

CBBS Chicago

Chicago, iL 312-545-8086

Sysops: Ward Christensen and Randy Sness. Hardware: North Star Horizon, hard disk, UDS 212A/D modem, Seitronics clock board. Software: CBBS.

Many folks call Ward Christensen the father of BBSes. This is his original board, now over seven years old. It's not for the faint-hearted; it's for the "more advanced, technical hobbyist." Suggested topics include C, Assembly language, artificial intelligence, programming techniques, and communications, with a special emphasis on CP/M, MS-DOS, and Unix operating systems. This is a message system, and it has more messages than you could read in a day (see Photo 2). While much of the material doesn't relate directly to TRS-80s, the users of this board possess a wealth of technical expertise, and many of the exchanges should pique the experienced computerist's curiosity. Even if you're a novice, you'll find the Chicago CBBS interesting and informative.

One important note: The possibility exists that the board has changed its phone number by the time you read this. If you can't get through, try calling 312-849-1132.

CBBS/BECS (Boeing Employees' Computing Society)

Bellevue, WA 206-772-3134

Sysop: Bill Hunter, Hardware: S.D. Systems system with two 8-inch double-sided, double-density drives, Heath H19 terminal, U.S. Robotics Autodial 212A modem. Software: CBBS.

This is a fine example of a BBS set up for company employees. While it's primarily for BECS members, "others are welcome to use the system in moderation as guests." We like the message board—it's casual but has lots of good information. The last time we were on, topics included software quality control, RS-232 technical specs, Ada, Forth, Pascal, and Unix. We also saw lots of equipment for sale. The download section includes mostly MS-DOS software.

Cleveland Forum-80

Cleveland, OH 216-486-4176

Sysop: Ray Furlong. Hardware: Model I with one drive, Penrel DCD modem. Software: Forum-80.

A Model I with one drive! That was enough to persuade us to include this board.

Forum-80s are a dylng breed, perhaps because of their limited capacity, but they're enjoyable and useful. We like this one because of its openness and relaxed atmosphere. It also has a number of useful files in its 57-item data base. These include PPL/BAS, a professional program lister; Terminal/BAS, a Model III Basic terminal program; The Creator, Bruce Tonkin's program generator; MICROHIS/TXT. an essay on the history of the microcomputer; Compress/BAS, a program compressor; Tollfree/TXT, a list of manufacturers' tollfree numbers; and SIXTWO/TXT, an explanation of the differences between TRSDOSes 6.1 and 6.2.

COMMNET-80

Riverside, CA 714-359-3189

Sysop: Stephen A. King. Hardware: Model I with three double-sided, double-density drives, Bell AR-212/L1A modem. Software: COMMNET-80.

This is one of six COMMNET-80 systems. It's modest, but is one of the friend-lier boards we ran across. It requires no registration or fees, and has no time limits, except in the game section. The data base includes 90 programs for downloading, with an emphasis on Orchestra-80/85 files. Some of the programs include Startrek; NOBUGMSG, a pre-log-on text writer by Ray Furlong; NWPROMPT, a NEWDOS/80 prompt customizer; Menu, a menu program; Change, a password changer; and SYSTST, an LDOS utility for checking the integrity of LDOS system files.

The games are mostly commercial interactive fiction, and change monthly.

Other COMMNET-80 systems are in Ak-

ron, OH (216-645-0827), Las Vegas, NV (702-870-9986), North Wales, PA (215-855-3809), Riverside, CA (714-877-2253), and Wichita Falls, TX (817-767-5847).

GASNET (Get-Away Special Net)

Greenbelt, MD 301-344-9156

Sysops: Bob Pincus and Clarke Prouty. Hardware: North Star Horizon with three drives. Software: Highly modified Microstuff program.

GASNET is run by the National Aeronautics and Space Administration (NASA) at the Goddard Space Flight Center to provide "current shuttle, GAS, and space information." It includes a message board; lists of active payloads, current GAS flight assignments, and GAS payload reservations; space shuttle news; and information on the Spartan programs.

This board provides a great deal of information for those interested in what's happening with the space program. We learned, for example, that NASA will be watching Halley's Comet from a free-flying payload to be released from the space shuttle next January. We also found out that GAS payloads are being sponsored by General Electric, Penn State, New Mexico State, St. Mary's Hospital, Datsun, the Los Angeles State Department of Education, and the Booker T. Washington Middle School.

The Good News BBS

Plymouth, MI 313-459-8375

Sysopa: Paul and Donna Sockow. Hardware: Model I with three drives. Software: L.D. Systems.

This board originated "from a sincere desire on our part to use our home TRS-80 computer for the honor and glory of the Lord." A number of such boards exist around the country, some more strident and didactic than others: this one seemed a bit more relaxed than most. If you're born again, you'll appreciate such essays as "Response to Homophobia," "101 Uses for a Dead (or Alive) Baby," "Evolution—Religion or Fact," and "Let Me Live" by Pat Boone. If you're not, you might find some food for thought in such pieces as "Dungeons and Dragons—Concerns for the Christian."

Good News also has a download section of secular TRS-80 utilities and programs.

Computers for Christ in San Jose, CA (408-997-2790) is another Christian board worth checking out.

Ham Radio Net

Newington, CT 203-665-1114

Sysop: Ed Raso. Hardware: IBM with 10-megabyte hard disk. Software: FldoNet.

Ham Radio Net is devoted to all "aspects of amateur radio." It includes electronic editions, past and current, of the ARRL (American Radio Relay League) Newsletter; Gateway, the ARRL packet radio newsletter; and the W5YI Report. it's data

base sections include QST (QST program files), Packet (packet and RTTY), and Ham (general ham radio), as well as a text file that contains the newsletters, general class rules and regulations, questions for hams taking licensing tests, bibliographies of IBM PC and amateur radio magazines; and a complete list of FidoNet BBSes (nearly 400 of them). If you're an amateur radio enthuslast, you won't get bored on this board.

Other BBSes relating to amateur radio are in Fairfax, VA (703-734-1387), Dallas, TX (214-223-0983), Shreveport, LA (318-688-7078), Billings, MT (406-256-8717), Gaithersburg, MD (301-926-8187), Poughkeepsie, NY (914-485-3393), Upper Marlboro, MD (301-350-1299), Selah, WA (509-697-7298), Duluth, MN (218-525-1788), Seattle, WA (206-285-3040 and 206-367-6053), Anchorage, AK (907-243-0324), and Merrimack, NH (603-424-5497).

Wilmington-80

Wilmington, NC 919-392-5560

Sysop: Mark Samwick. **Hardware:** Model 4 with four drives. **Software:** Modified Greene Machine/RATS.

Noteworthy because it's the only bulletin board we found being run by a Radio Shack Computer Center. It has modest message base and download sections, and seems primarily to be operating as a service for the store's customers.

MEIE (Microcomputer Electronic Information Exchange)

Washington, D.C. 301-948-5718

Sysop: Ted Landberg. Hardware: IBM PC XT. Software: RBBS.

The MEIE BBS is run by the Institute for Computer Sciences and Technology

Photo 1. Files for downloading on the Bullet-80 board in Anaheim, CA.

Photo 2. A sampling of messages on the CBBS board in Chicago.

(ICST) at the National Bureau of Standards (NBS) to distribute information about microcomputers. Since a government body runs this BBS, you might expect it to be a bit stuffy. Well, it is. But it has a lot of useful material, most notably in the file subsystem, which includes information on ICST programs and activities, user's groups, and federal training programs, as well as a section for the Computer Performance and Evaluation Group. It also has an invaluable list of federal publications relating to computing. And finally, the board has a message section with discussions of various microcomputer systems, questions about software, and tips.

We found three other government BBSes: the General Services Administration board at 202-566-0660, the ICST Data Management BBS at 301-948-2048, and a U.S. Geological Survey BBS at 703-860-7894.

Production World

San Mateo, CA 415-571-6160

Sysop: Wes Dorman, Hardware: IBM PC. Software: RBBS.

This BBS bills itself as a service for the video, motion picture, photography, and audio industries. It includes a professional services directory, classified section, and on-line discount catalog of computer products. It has a limited data base of programs.

PSINET

Denver, CO 303-722-6210

Sysop: William Tedder. Hardware: Model III with four drives. Software: TBBS.

Run by the Parapsychology Information Network, PSINET is for those with a serious interest in psychic phenomena. Features include a Premonitions Registry; Dreamnet, which includes an interactive program to help you interpret dreams; online ESP and psychokinesis tests; personal accounts of psychic experiences; and extensive lists of literature and organizations.

If you want to get really depressed, leaf through the Premonitions Registry, in which people describe their premonitions and predictions. Most of them start off with something like, "I'm standing in downtown Washington, D.C. An ICBM with an H-bomb lands just on the other side of the building from me." Real uplifting stuff.

SF Writers' Network

Winston-Salem, NC 919-922-3308

Sysop: David Dalton. Hardware: Model 4 with two floppies and 10-megabyte hard drive. Software: TBBS.

Don't let the name fool you: This is not just another wacked-out SF/fantasy board inhabited by Trekkies and space cowboys. In fact, it's one of the most literate and intelligent boards we ran across, due, no

Photo 3. One of the menus on the SF Writer's board in Winston-Salem, NC.

doubt, to the fact that sysop David Dalton is a newspaper editor (as well as an 80 Micro reviewer). It should interest even those who are not sci-fi buffs (see Photo 3).

The board's most interesting features are an on-line novel called Strange Parttcle People, news commentaries on topics like "Does Electronic Mall Make Us Eloquent? Or Mean?," and technical papers with titles such as "Mysteries of Data Communications: Some Answers to Frequently Asked Questions" and "Schrodinger's Cat: A Bit About the Weirdness of Quantum Mechanics."

We also found an index to 80 Micro articles, a TRS-80 SIG, and a list of important Tandy service numbers.

What struck us the most, though, was the quality of the message board. The folks who come here are witty and have something to say about a broad range of topics.

Soft Horizous

South Dennis, NJ 609-861-2098

Sysops: Dan Keen and Dave Dischert. Hardware: Model III with Model 2000 drives. Software: TBBS.

This is an expanded electronic version of Soft Horizons magazine, a modest, 20-page bimonthly that covers the Model 2000 and Tandy's other MS-DOS machines. It includes all issues of Soft Horizons, as well as a message board and classified section. To access the magazine text files, you need to pay a \$10 subscription fee. (The paper version is \$20 a year.)

To give you an idea of what you get: The December/January issue included a site survey program for satellite TV, a Model 2000 orbital simulator graphics program, a Model 2000 clock display program, reviews of IBM PC and Model 2000 Basic compilers, and a column on C programming.

Keen and Dischert will be familiar to some 80 Micro readers: they wrote our Suite 16 column for the Model 16.

Southeastern Software and Message Exchange (SESAME)

Raleigh, NC

919-737-3990

Sysop: Wayne Cornelius. Hardware: IBM PC. Software: RBBS.

SESAME is a service of the Southeastern Cooperative Wildlife and Fisheries Statistics Project. Its goal is to disseminate "software and computing wisdom of interest to Wildlife and Fisheries professionals." The emphasis is on statistics; a typical message reads something like "I would like to find a program to separate polymodal size frequency distributions into cohorts." The data base includes a number of statistics programs, mostly for MS-DOS machines, although we also found one for the Model 16.

While the board is open to anyone, professionals have higher priority access. A Professional SIG includes sections for the American Fisheries Society, wildlife and forestry management, and fishery management.

TCUG (Tandy Computer Users Group)

Washington, D.C. 703-836-0384

Sysop: Ronnie Bell. Hardware: Lobo Systems Max-80, two 8-inch disk drives, three 514-inch disk drives. Software: CompuCenter written by Roger Fujii and Gary Godfrey under LDOS.

TCUG sponsors an informative and interesting BBS. It makes all callers feel welcome, while encouraging nonmembers to join the group by sending annual dues of \$25.

The board is divided into SIGs, called conferences, for discussions of most Radio Shack computers. When we logged on, TCUG was polling callers on the viability of a Model 4 conference. The message bases are active with discussions of programming tips, bugs in software, and reviews.

Far and away, though, the most impressive feature of the board (and the user's group) is the software library. Membership gives you access to the club's library of about 705¼-inch disks of software, primarily for the Models I and III. The club also has Model 100. Coco, and CP/M programs. When we called, the group was building a software library for Tandy's MS-DOS machines. Even if you're not a member, you can find out what programs are available by checking the board's indexes of selected library disks.

Bradford N. Dixon and Eric Maloney are on the 80 Micro staff.

BS Directory

The numbers below were cuited from BBSes across the United States and Canada. 80 Micro cannot guarantee that all entries are correct.

Introducing Super Utility 4/4P.

The indispensible first-aid kit for TRS-80 users only from PowerSoft.

ven the healthiest computer needs occasional "doctoring". And that's precisely what Super Utility 4/4P is for. To help you handle routine check-ups, take care of minor emergencies and perform major surgery with relative ease. So effective it mends everything but a

broken heart. The latest generation of PowerSoft's highly-rated program contains over 60 different utilities. So you can examine file locations.

Reformat without crasing reeders' cl data. Test nipulate me memory. Save valuable data and disks. Revive dead files. And much, much more. So easy you can perform near miracles ln no time.

Version Four enhancements make Super Utility 4/4P easier, faster and more efficient than ever. It boots and loads 50% faster. Utilizes 64K for faster file

copies and hackups. It's configurable with most Model $4/\Pi I/4$ operating systems for fast, easy transfer of files. And introduces three function keys, including a user-definable key, for easy, single-stroke operations. So economical you can't afford to be without it. At only \$79.95, SU4/4P can be yours. And that includes both a master and backup disk, 148 page manual, binder and full support. The more you know ahout your TRS-80, the more you'll want SU4/4P. The less you know about your

need SU4/4P. So place your order today by calling or writing:

TRS-80, the more you'll

ANNOUNCING: By far the most powerful

BULLETIN BOARD SYSTEM for TRS-80 Models I, III and 4(III).

"The French Connection" by Phil French

TFC FEATURES:

- You can select either an "open access" or a secure private-password system.
- Separate private mail and general bulletin sections.
 Easy to use but advanced "layered menu" system, with an "expert mode" also.
 An Information Section including a modifiable Information Directory, and the ability to remotely edit or create Information files
- Special user priviledges may be individuelly assigned, from Upload/Download access to remote sysop status.
- Features of the system can be tallored to each individual user, such as screen width for word wrap, linefeed enable/disable, upload promts, special characters, and more,
- Plus endiess other goodies such as free-format text entry; also all the regular stuff like upload/download, mail read/scan options, caller log, and lots, lots, more.
 TFC Is written in 100% Z-80 assembly language for efficiency and security

INTRODUCTORY OFFER \$99.50

Bulletin Boards Systems are popping up all over these days for special groups, commercial use, or just general access. All you need to run one off your own computer is a modern and the right software, and that's where TFC comes in. There are many other BRS programs available for the TRS-80, but once you check out the leatures of TFC you'll see that there is really no comparison. Many of the features TFC assumes to be essential are either "special leatures" or non-existent on other systems. Such as TFC's "free format text entry", which allows text input without an [ENTER] after each screen line, unlike many other systems. TFC will then format and word-wrap the display to any screen width from 32 to 80 characters. As well, TFC has personal "mailboxes", completely separate from the general buileting file. Even if you already run a BBS system, you should look into the advanced features that TFC anything less...

by Hardin Brothers

A comparison of three commercial Basic authoring systems for the Model I/III/4 programmer.

sk any three programmers what they think of Microsoft Basic and you're likely to get three different answers, ranging from happy acceptance to complete revuision. Some programmers like Basic's interactive nature. Some complain about its reliance on line numbers, lack of local variables, and poor control structures, all of which make structured Basic programming harder than it should be,

if you're a Model l/iii/4 owner who wants more out of Basic, you can choose from several products designed to overcome some of the language's inherent flaws and simplify structured Basic programming. In this article, I'll examine three of those products, known as Basic authoring systems, and describe whai I see as their strengths and weaknesses.

The DOSPLUS System

Every independent Model I/III DOS manufacturer added extensions to Disk

Basic to make it more powerful than the Radio Shack and Microsoft standards. However, the only independent company to provide an alternative DOS and Basic for the Model 4/4P is Micro-Systems Software inc., the manufacturer of DOSPLUS.

Micro-Systems' enhanced version of Basic is available in three forms: as part of DOSPLUS 3.5 for the Model I/III, as part of DOSPLUS IVA for the Model 4, or as a product called 6.2 PLUS for Model 4 TRSDOS users (which I'iI refer to as 6.X PLUS, since the 6.2 version was not yet available when I prepared this article). For product information, see the Table.

Micro-Systems' Basic is unique in recognizing that line numbers more often hinder than help programmers. It lets you define routines by name, as in NAME HELP, so you don't have to remember specific line numbers. Then, elsewhere in your program, you can refer to the routine's name, as in GOTO HELP and GOSUB HELP.

in short programs, this feature may not

be too important, but it's valuable when you're writing long programs. You no longer have to keep a list of routines' line numbers, or seroll through a program to find the beginning of a special routine. Also, your programs become much easier to read and debug when you can use a command like GOSUB CREATE.KEYS instead of GOSUB 12550.

Programs containing named subroutines work only under DOSPLUS Basic, however, if you're developing software for users of other versions, you have to remove the names and change the references before distributing the program. All DOSPLUS Basics Include a command called Resolve that does just that.

DOSPLUS and 6.X PLUS Basic have other Basic enhancements that aid program development, including shorthand commands, an excellent sort routine, a cross-reference utility, and a global search-and-replace function for programs in memory. Also, 6.X PLUS includes sev-

eral enhancements for TRSDOS 6.X at the DOS level. (See the Related Articles box at the end of this article for references to reviews of DOSPLUS 3.5 and 6.X PLUS.)

DOSPLUS Basic ts one step closer to a more structured and easier-to-use Basic. Its advantage is that it's an enhancement to Basic, retaining Basic's full interactive flavor. However, this is also its biggest disadvantage: You're still faced with Basic's rather clumsy program editor and you must still use line numbers, even if all your GOTO and GOSUB commands branch to labeled lines.

The Basic Answer

The Basic Answer (TBA) from Logical Systems brings a totally different feel to writing Basic programs. It lets you forget about line numbers, supports global and pseudo-local variable names, and adds several processor directives to Basic's normal syntax.

Creating a program with TBA is a twostep process. First, you write the program's source code following TBA's conventions. You can use a word processor or text editor if you want, giving you the luxury of full-screen editing, or you can use Basic's editor. In either case, you save the program in ASCII format and then run TBA to convert the source code into a functioning Basic program. Finally, you run the resulting program.

If you've never written in a compiled language such as C. Pascal, or Assembly-language, the two-step process might sound awkward. But in my opinion, the advantages of using a word processor's editing facilities far outweigh forsaking Basic's interactive environment.

TBA forces you to use reference labels instead of line numbers, while the DOS-PLUS Basics give you the option of doing so. In general, labeling will probably make your programs more structured and easier to read, debug, and maintain. Using labels will also accustom you to thinking of program sections as independent procedures.

TBA has several other interesting features. It requires that you make all variable names between two and 13 characters long, and you must follow them with a type flag (%, !, #, or \$). Variable names may in-

clude Basic reserved words such as OR and may also include periods or underline characters to improve readability. This means you can use variable names like "Record.Number%" and "Last__Name\$", forbidden under most other TRS-80-compatible Basics.

Particularly interesting and helpful is TBA's use of global and pseudo-local variables. TBA demands that you define all variables as either global or local before you use them. You can use global variables throughout a program; local variables are confined to a specific procedure or subroutine. You can also use the same variable name as a local variable in several different subroutines without the possible conflicts or side effects you'd normally get in Basic.

TBA has two other important features. First, it lels you embed compiler directives in your source code. For example, you can

DOSPLUS and 6.2 PLUS

6.2 PLUS \$49.95

The Basic Answer Logical Systems Inc. 8970 N. 55th St. P.O. Box 23956 Milwaukee, WI 53223 800-248-3535 \$29.00

The Alternate Basic 704 N. Pennsylvania Lansing, MI 48906 517-482-8270 \$69.95

Table. Basic authoring systems' product information.

tell TBA how many lines of source code to print per page, how to title each page, when to skip to the next page, and when to turn the source code listing on or off.

The last of these directives is important if you write program modules and save them separately to dtsk. Say you've written a section of code that flashes a message on the screen until the user responds by pressing a key. You can insert this routine any time you write a program simply by loading it from disk. However, you probably don't want or need a printout of that procedure every time you ltst your program.

Once you've finished writing a program, you save it to disk from your word processor and return to DOS. Then you run TBA, telling it the names of your source code file and finished program, and sit back to watch the action. TBA scans all your program's variables and substitutes for each

a unique two-character variable name that satisfies Basic's requirements. TBA generates Basic code, deleting all label names, all comments that begin with an apostrophe, and all directives.

If you want, TBA sends the source code to your screen or to a printer. You can also display each line as TBA translates it into Basic. At the end of the listing, TBA displays a cross-reference list of label names and variables.

The label list shows the line in which you defined each label along with a list of all line numbers that refer to that label. The variables list does the same, and also displays the two-character variable name TBA created for that label. You'll find both lists useful for debugging the final program.

The Alternate Basic

TBA excels at handling variables, but it doesn't add any new control structures to Basic. The Alternate Basic does just the opposite: It adds a number of new and powerful control structures, but leaves control of variables up to the programmer.

The Alternate Source distributes The Alternate Basic (ABasic) in versions for the Models I, III, 4, 1000, 1200, and 2000, most CP/M computers, and all PC-DOS/MS-DOS machines. I used the Model 4 version while researching this article.

As with TBA, you write source code with a word processor and ABasic converts that code to a Basic program. You can dtsplay a list of labels and their corresponding line numbers during conversion but, unlike TBA, ABasic doesn't create a list of variables at the same time. However, ABasic comes with several utility programs you can use to create many types of cross-reference listings.

ABasic requires label variables instead of absolute line numbers for GOTO and GOSUB commands. ABasic also can search libraries of subroutines and pull the appropriate routines out of a file without copying the entire library file into the new program.

ABasic's greatest strength to the control structures it adds to standard Basic. With them, I find I can write complex programs much more quickly and with very few logical bugs. Programmers who've used structured languages will find most of the same major control structures in ABasic.

TRS-80" - Tandy - IBM Personal Computer - MS-DOS - CP/M

SMALL BUSINESS ACCOUNTING WITH PAYROLL \$79.95

Based on the **Dome Bookkeeping Record #612**, this program handles income, expenditures, and payroll for a small business. Complete ledgers are maintained for income and expenses on a monthly basis. The program computes monthly, through last month, and year-to-date summaries. The payroll section can handle up to 99 employees. Paychecks with up to six deductions can be entered whenever desired (weekly, monthly, etc.). The program can print both payroll and expense checks. Quarterly and year-to-date payroll summaries can be computed for one or all employees.

HOME BUDGET and CHECKBOOK ANALYST \$59.95

A complete checkbook program together with budgeting, income and expense analysis, comparisons, and projections. First, it is a complete checking program: enter and print checks, enter deposits, and compute your current checking balance. The program also handles non-check expenses and income. It computes monthly and year-to-date income and expense summaries, and projections for the year based on data through a known month. Monthly expenses can be compared to a pre-established budget.

MAILING LIST \$69.95

Maintain mailing lists of up to as many names as you can fit on a standard diskette (1,250 for TRSDOS, 2,500 for MS-DOS). Add, change, delete, or find names. Sort according to data in **arry** field. Print labels in 1, 2, 3, or 4 columns with adjustable tabs.

TRS-80" Models 1, 3, and 4

TYPITALL Word Processor \$129.95 TYPITALL with Spelling Checker \$179.95

The most powerful word processor for the TRS-80s TYPITALL is upward compatible with SCRIPSIT— it reads your old SCRIPSIT files and uses the formatting and cursor movement commands you are already familiar with. But it is a completely new word processor with so many advanced features that we can't even mention all of them here. You'll wonder why other word processors don't have some of these features.

- Send any control or graphic/special character to the printer.
- Print the formatted text on the screen before going to the printer
- Send formatted text to a disk file for later printing.
- Merge data from a file during printing. Names, addresses, and other text can be inserted during printing. No need for a separate program for "mail merge" capabilities!
- Print while editing (spooling).
- Assign any sequence of keystrokes to a single control key
- . Call up to 16 help screens at any time.
- Move cursor forwards or backwards by character, word, line, or page.
- Reenter the program with all text Intact if you accidentally exit without saving the text.
- Optional spelling checker comes with 29,500 word dictionary. Verify a 3,500 word document in less than two minutes.
- True Model 4 (80 x 24 display, TRSDOS 6) and Model I/III versions,

SYSTEM DIAGNOSTIC \$99.95

Is your computer working correctly? **Are you sure?** Find out for certain with System Diagnostic, which has complete tests for every component of your TRS-80 Model 1, 3, or 4.

ROM: checksum test. RAM: three tests including every location and data value. Video display: character generator, video RAM, video signal. Keyboard: every key contact tested. Line printer: character tests with adjustable platen length. Cassette recorder: read, write, verify data. Disk drives: disk controller, drive select, track seek, read sectors, formatting, read/write/verify data with or without erasing, disk drive timer, disk head cleaner. Single or double density, 1-99 tracks. RS-232-C Interface: connector fault, data transmission, framing, data loop, baud rate generator.

SMART TERMINAL \$74.95

The Intelligent communication prugram. Use your TRS-80 to communicate with other computers, builletin boards, information services, time sharing, or for data transmission. Memory buffer holds data to be transmitted or received Automatic transmission of data from buffer. Automatic storage of incoming data. Character translations. Data files compatible with word processors and BASIC programs. True BREAK key.

TRS-80™ MODEL III ASSEMBLY LANGUAGE book \$16.95

A complete course on assembly language, written for the **beginner**. Contents include, the **Z80** instruction set; TRS-80th **Model III ROM and RAM**; Using the Editor/Assembler, Reading, printing and moving data, arithmetic operations; floating-point and BCD numbers; logical and bit operations; cassette input and output, USR subroutines in BASIC, RS-232-C data continuousation; disk input and output; the TRSDOS I.3 disk operating system.

ASSEMBLY LANGUAGE MONITOR #5 \$22.95

TRS-B0™ MODEL III ASSEMBLY LANGUAGE book and MONITOR #5 \$29.95

A comprehensive machine language monitor and debugging program. **Display** memory in ASCII or heavdecimal format. **Disassemble** memory to show machine language commands. **Move and compare** blocks. **Search** through memory for different values. **Modify** memory in different ways. **Relocate** machine language programs. **Read and write** cassette tapes of machine language programs. **Unload** programs in low RAM on disk, **Print** output optionally on video display or line printer. **Save and load** disk files. **Input and output of disk sectors,** bypassing disk operating system. **Complete debugging package**, including setting and displaying registers, single stepping through machine instructions, setting breakpoints, and executing machine language operations.

One ABasic extension is an enhanced form of If...Then...Else. The expression If evaluates must fit on one line, but you can include as many lines of code as you want in your Then and Else structures. Because you don't have to squeeze an If...Then...Else construction into a single line, you can often avoid GOTO jumps out of the Then or Else section of code.

ABasic also adds a Do Until loop that lets you write a section of code (as long as you want) that executes at least once. At the end of the loop, the program tests an expression, aimilar to an If expression, and repeats the loop unless the expression is false. For example, If you want to pause a program until the user presses a key, you could code it this way:

PRINT "Press any key"
DO UNTIL A\$< >""
A\$ = INKEY\$
END DO

Here's an even more efficient way:

PRINT "Press any key"
DO UNTIL INKEY\$<>""
END DO

Similar to the Do Until loop is ABasic's Do White loop. This is of little use to Model 4 or MS-DOS users, whose Basics already include While...Wend, but it can be a great help to Model I/III owners.

A Do While loop checks for a condition at the beginning of the loop. If that condition is true, the loop executes and then the program checks the condition again. When the condition is false, control passes to the next command after the end of the loop. You could write the routine above using a Do While loop:

A\$=""
PRINT "Press any key"
DO WHILE A\$=""
A\$ = INKEY\$
END DO

ABasic's final extension to standard Basic is a complete case structure, which bases program action on a given variable's value. For example, you might prompt the user to select a menu option by pressing the 1, 2, or 3 key. If you collect the key's value in A\$ using an INPUT\$ command (on the Model 4), the program can branch to the appropriate routine depending on A\$'s value.

Unlike standard Basic's On...GOSUB

command, the Case command lets you direct execution to an unlimited number of lines of code for each choice. Case also offers an optional Else statement to trap unwanted user input.

ABasic's conversion process is similar to TBA'a. After you write a program with your word processor, you save it in ASCII format and run ABasic from DOS Ready. You type in the names of your input and output files and set a number of optional compiling parameters.

As ABasic works on your input file, it collects a list of the errors it finds and indicates the output file's line number for each error. Possible errors include invalid label references, a Do statement without an End Do, multiple Else statements, and so on.

ABasic has several utilities designed to make some kinds of debugging and program documentation easier. One is CREF, which creates and displays (or prints) a complete alphabetical list of a program's variables, with the line numbers of every occurrence of each variable.

Another utility, LVAR, produces a list of all procedures in an ABasic source file and the variables in each procedure. This utility assumes that a procedure starts with a label name and ends on the line before the next label name. If you have several labels inside a single procedure or subroutine, you'll find the variables list slightly less useful than it would otherwise be. However, the LVAR display can be extremely helpful in finding conflicts between variables.

A thtrd ABasic utility is XVAR, which translates variables names in an ABasic or standard Basic file. To use XVAR, you specify your input and output files and type in the original and new names of each variable you want to change. I found XVAR a little clumsy; I wish you could refer XVAR to a disk file for the translation table. In many cases, XVAR is no more convenient than a word processor's search-and-replace function.

ABasic's XLATE utility translates characters in an ASCII file to any other set of characters. You can also use it to add or strip line numbers; when adding line numbers to a file, you can specify any values you want for the beginning number and the increment.

The last ABasic utility is a help orogram; its source code comes on the A disk, so you can add it to your prog The manual telis you how to context files to work with the help prog-

The Bottom Line

How to choose among these three authoring systems? All support lab routines, so you can forget abou numbers. All can help you write cl more structured programs that are to debug and maintain, and more lil run correctly the first time, than sta Basic programs.

The DOSPLUS Basics are the eas

use, especially for ahorter programs, since you never have to leave the Basic interpreter. Unlike the other two programs, the DOSPLUS Basics don't require that you write a source code file and translate it into standard TRS-80 Basic.

The Basic Answer has by far the strongest variable-handling capabilities. It frees you from worry about possible variables conflicts. Model I/III users should enjoy being able to use variables longer than two characters regardless of embedded reserved words.

The Alternate Basic's added control atructures are its strongest feature, and I also like its ability to pick a specific routine out of a library file. However, ABasic doesn't check for variable conflicts, so you must keep careful records of the variable names you use in library routines.

Because I find that I write fastest in a atructured language, I prefer using ABasic for major programming projects. I also enjoy using 6.X PLUS to write "quick and dirty" programs directly in Basic. I'd like to have TBA's support of local and global variables, but I haven't found a practical way to run the same source file through ABasic and TBA.

A combination of TBA and ABasic would be ideal, but unfortunately, such a program doesn't exist, at least not for TRS-80 users.

Hardin Brothers, an 80 Micro associote editor, writes about programming: his column on Assembly language, The Next Step, appears every month. You can contact him at 280 N. Campus Ave., Upland, CA 91786. Please enclose a stamped, oddressed envelope for a reply.

Super Spring Sale

C compiler

for the model 1 or 3 using TRSDOS, LDOS, NEWDOS, DOSPLUS, or MULTIDOS; includes full screen text editor and advanced development package

List Price \$250.00 Sale Price \$89.95

This is a full K & R standard implementation of C that includes a Unix compatible function library. The package also includes a 450 page manual with a tutorial on using the C language. If you've been wanting to learn C, this is the package you need.

Features Include

char	8 bits	initializers
short	8 bits	typedef
int	16 bits	static
unsigned	16 bits	auto
long	32 bits	extern
float	32 bits	struct/bit fields
double	64 bits	union

Execution speed on the Model 3 for 10 iterations of the prime number program published in Byte, Jan 83, page 284.

LC Compiler 105 secs.
Alcor C 78 secs.

Special Bonus

Buy one version for \$89.95 and get the version for the other model for only \$21.

Multi-Basic compiler

for the model 1 or 3, or 4 using TRSDOS, LOOS, NEWDOS, DOSPLUS, or MULTIDOS; includes full screen text editor and advanced development package

List Price \$250.00 Sale Price \$89.95

Multi-Basic is a TRS-80 BASIC compatible compiler. The Model 4 version supports everything in the TRSDOS 6 BASIC interpreter except the COMMON statement. The same support is provided in the Model 1 and 3 versions so programs are portable. The CMD statement is the only statement from the Model 1 and 3 BASIC interpreters that is not supported.

Multi-Basic also supports advanced language features like multi-line procedures and functions, recursion, and dynamic string management (no long pauses for garbage collection).

Execution speed on the model 3 for 10 iterations of the prime number program published in Byte, Jan 83, page 286.

BASIC Interpreter Multi-Basic

4570 secs. 89 secs.

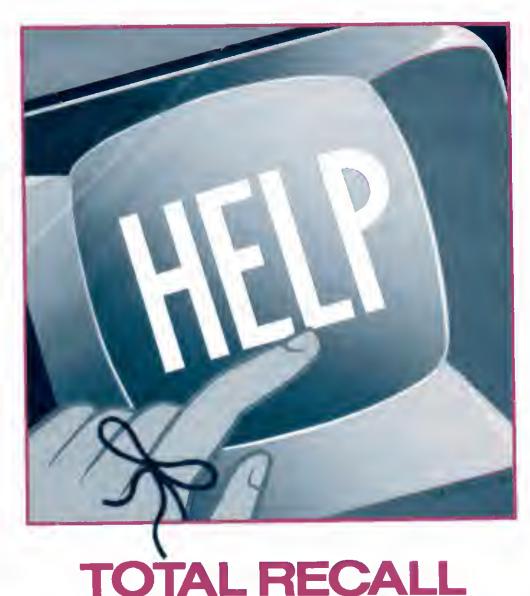

Special Bonus

Buy one version for \$89.95 and get versions for the other two models for only \$21 each.

O IAL NLUA

by John D. Wolfskill

Get help any time you need it with pop-up screens that display program commands, instructions, or hints.

f you're like me, you probably wade through an applications manual every time you run a program, looking for a particular command sequence—the one you always seem to forget. With Helper, you can display frequently needed commands, instructions, or tips on your Model 4 any time you need them—even in the middle of an applications program (including Basic). Helper superimposes its six-line help screens over your program display; you can view a series of help screens without losing your active display.

Helper lets you create, edit, and manipulate up to 16 of these text or graphics screens (see Photo 1). Its machine-language control routine becomes a transparent part of your TRSDOS 6.X operating system, giving you universal access to the help screens.

Preliminary Screening

To build a file of help screens, type in

the Program Listing and save it to disk. Then run the program; after a title screen, you'll see the prompt "Create new file?" Type in Y. At the file name prompt, type in HELP1/BAS:0. Helper will create a file of 16 blank records on drive zero and display its main menu (see Table 1 for a description of the options).

Press the E key to invoke the Edit option (Table 2 describes the edit menu's options). You'll see a blinking cursor in the screen's upper left-hand corner. Now type in your help screen text, using any or all of screen rows 0–5. Helper accepts all text, graphics, or special characters available from the keyboard, except reverse video characters (see Photo 2).

When you finish, press control-T for the Title option. Type in a descriptive title of up to 29 characters. Now press the enter key. Helper writes record 1 to a temporary storage area and returns control to the main menu.

Press E again to reenter the Edit mode. You're still on record 1. To page forward, press the shift and up-arrow keys simultaneously. The screen tells you you're on record 2: you can now type in your second help screen. To page backward through the file, press the shift and down-arrow keys. If you edit a record, you must update it by pressing control-U before you move to the next record. Updating isn't necessary if you're just browsing through the file.

Add a few more help screens to the file and you're ready to install your records.

System Requirements

Model 4 64K RAM Disk Basic

Record Selection

From the main menu, press S to select the records you want Helper to install and have ready for immediate display. You may select any or all of the 16 available records. A fast-blinking cursor appears next to record 1. If you want to install this record, press the enter key. A solid graphics block marks the records you select.

To bypass a record, press the down-arrow key. As you mark each record, the bottom right of the screen displays the amount of random-access memory available (in a 64K machine) after you install the Helper records. Continue until you've selected or bypassed all records.

At this point make sure you've saved Listing 1 to disk. If so, type in Y at the prompt "Install selected records?". Helper saves the resident file to disk and begins installing the selected records in high memory. Each record appears on the video screen as it's written. When you've got the last record in place, a short tone and message inform you that you've installed Helper. Helper then invokes a New command in Basic and returns control to TRSDOS.

Help for the Asking

Move the cursor to the center of the screen. Now press control-A. Your first help record opens as a window from the top of the display. Each time you press the control-A combination, Helper displays the next record in sequence. After it displays the last record, Helper rewinds its buffer to the beginning. You can't reverse this action, but the buffer cycles so rapidly you don't really need to.

Now put Helper through its paces. Call up a directory, or invoke any other DOS library command that fills the screen with text. Note that Helper's text area is scroll-protected. In most cases, screen output works around Helper's display.

To remove the scroll protection, press

control-B. Now call up a directory again. This time, Helper scrolls off the display. Fill the screen with text once more and press control-A. Helper overwrites part of your text. Press control-B and Helper restores the screen to its original condition. By alternating between control-A and control-B, you can cycle through Helper's buffer without destroying your active screen display.

Instant Pictures

Helper can also take a "snapshot" of the diaplay's top six lines to temporarily save part of any screen in which you're interested. To see how, call a directory again. From TRSDOS Ready, press the enter key until the information you want to capture is on the screen's top six rows. Press control-C. A ahort tone tells you Helper has snapped its camera shutter.

Now get into Basic and run any program you want. Press control-B and your snapshot will appear. To save the snapshot for future use, press control-C again. Alternating between control-C and control-B retains the information in the snapshot buffer.

Reruns

The Helper menn's CONFIG option is a short-cut way to install a file with records you selected in a previous session. To use CONFIG, reload and run Listing 1. At the "Create new file?" prompt, you may opt to look at your current disk directories by typing in DIR. Now reload HELP1/BAS:0. When the main menu appears, press the C key. CONFIG immediately installs the file's previously selected records and returns control to TRSDOS Ready.

Some Basic Pointers

You can deactivate Helper from Basic without resetting your computer. Make sure you turn off scroll protection by pressing control-B. Then, in the immedi-

ate mode, type in POKE &H0089,201. Helper remains in memory but won't function. You can reactivate it whenever you want by typing in POKE &H0089, 195. However, to remove Helper and reclaim its memory area you must reboot the computer.

To assign Helper commands to the Model 4'a unused function keys, type in:

POKE &HFE28,129:POKE &HFE38,130:POKE &HFE42,131

in the immediate mode. This assigns the control-A command to function key F1, control-B to F2, and control-C to F3.

Key reassignments remain in effect at all operating levels until you change them or turn off the computer. To assign the function keys different values, change the character codes that follow the commas in the Listing's POKE statements.

Auto Assembly

You can easily prepare your disks so that a specific Helper file automatically loads each time you boot up. Your options are to build a job control language (JCL) file or to configure (SYSGEN) the disk itself.

JCL files, often used for automatic execution of DOS commands, can also supply prerecorded input to a Basic program such as Helper. To set Helper for JCL installation, make the changes shown in the Figure. Save the updated liating to disk as Helper/BAS and return to TRSDOS Resdy.

Now build a simple JCL file using the command BUILD HELP/JCL. Type in the following, using the name of your help record file where HELP1/BAS occurs. Press the enter key after each command line, leaving no extra spaces:

BASIC LOAD"HELPER/BAS:0",R N HELP1/BAS:0*

Press control/shift-@ to write Help/JCL to drive zero. Type in AUTO DO HELP/

Photo 2. Creating a help screen.

Command	Key	Description
Edit	E	Creates or edits a record file.
File	F	Updates resident Helper disk file. Lets you write or edit text records without installing them in memory.
Select	S	Selects records for installation.
CONFIG	С	Installs selected rec- ord configuration. Loads all previously marked records.
Table i	I. Helj	per's main menu.

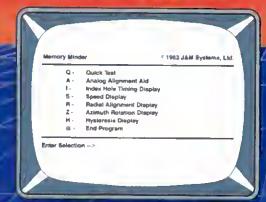

Command	Key(s)	Description
Forward	Shift-Up	Displays next higher rec-
Back	Shift-Down	Displays next lower recurd.
Titie .	Control-T	Normal exit from the Edit option; auto- matically op- dates record.
Update	Control-U	Updates cur- rent record; saves addi- tions or edit- ing changes.
Exit	Control-E	Alternate exit from the Edit option: doesn't save editing changes.
Table	2. Helper's	edit menu.

Variable	Description
HP\$(2,16)	Text records. Each record consists of two strings of 240 characters each.
RN\$(16)	Directory records titles. Each title is 29 characters in length.
HPI\$. RNI\$	Pre-allocates Helper file space in memory and on disk. Used to create a help file.
SR(16)	Selected record status. 1 = selected; 0 = not selected.
AD,WP.BC	C General purpose counter variables.
B,C,H,L,A	A Register values returned from supervisor calls.
MS	Memory available after Helper and records are in- stalled.
Ta	ble 4. Key variables.

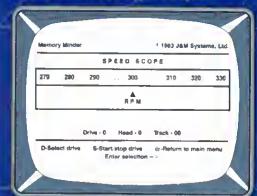

Line	Description
80	Reserves memory for use by the video control routine (SCRN).
100-120	Variable initialization area. Sets code 21 toggle for special characters; after a break, issue
120	PRINT CHR\$(21) before restarting the program.
140-160	POKEs video control handling routine (SCRN) into high memory.
170-220	Priots title.
230-290	File initialization area; creates new file by writing HPI\$, RNI\$ arrays to disk.
300	Displays disk directory using SVC #34.
310-340	Reads Helper file from disk to memory.
350-430	Main menu.
440-450	Edit menu.
460-610	Text entry routine. Line 480 uses SVC # 15 to get the current cursor position following each keystroke. Variable E holds result.
620-680	Directory title entry routine.
690-720	Displays requested record. The last screen print position in the text area can't be written. Line 1410 uses this byte to add a carriage return (ASCII 13) that serves as a record delimiter for the control routine.
730-800	Record update routine. Line 750 transfers the screen to a 2K buffer area using SVC #15. Text/title information extracted by first PEEKing the buffer, then POKEing the values into string array variables HP\$ and RN\$.
610-880	Directory title display routine. Line 840 flags previously selected records with a graphics block character.
890-990	Record select routine. Line 910 removes marker blocks from previously selected records.
1000-1100	CONFIG record check. Used by the CONFIG option to determine if any records have been previously selected for installation. If no records have been selected, CONFIG returns control to the main menu, otherwise it asks for verification to install selected records.
1100-1140	Updates resident file to disk. Saves all editing changes.
1150-1200	Record installation routine. Line 1180 checks for selected records.
1210	Clear test line.
1220-1290	Pre-allocates memory space for Helper records.
1300-1360	Determines number of selected records for installation via the CONFIG option.
1370-1420	Main record installation routine. Text buffer size is allocated according to the number of selected records.
1380	Assigns buffer starting and ending addresses.
1390	Transfers records to the video screen.
1400	Uses SVC #15 to read the screen contents into a temporary buffer area.
1410	Transfers the records to their execution location in high memory.
1430-1570	Record control routine. Preloads text buffer start address to control routine. HST =
1520	most significant byte; LST = least significant byte.
1530	Preloads text buffer end address to control routine. HED = most significant byte.
1540	Preloads record counter address to control routine. HCTR = most significant byte; LCTR = least aignificant byte.
1550	Adjusts system HIGH\$ marker to protect control routine and text records from being overwritten.
1560	Sets @KiTSK jump vector to start address of control routine.

MEMORY MINDER

A UNIQUE APPROACH TO DISK RELIABILITY!

Select any one of seven tests to purform preventive maintenance or to isolate problems. Simple, single-letter commands make MM easy to use! Use MM to alion the head, sojust the index hole detector, or adjust the speed.

Check the motor speed of your drives. Or, you can even use the Speed Test to adjust the drive speed. No need for any test equipment!

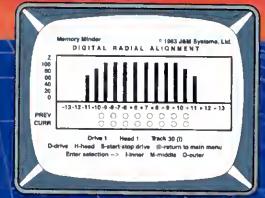

PROTECT YOUR DATA.

New you can make sure your data is being recorded properly by the use of the revolutionary Memory Minder.

The Memory Minder from J & M Systems, tests your disk's performance and calibration without any additional equipment! It measures your disk's performance and displays it on your screen.

This is the most comprehensive disk diagnostic program available for your TRS-80 microcomputer. You can even adjust drive alignment while watching the display!

Spot problems before they endanger your data!
If you own a disk drive, you need the Memory
Minder!

Use the MM Radial Alicement Test to check the head alignment of your drives. No need for an oacilloscope or other expensive test equipment.

Use the Quick Test to quickly and eutomatically test five of the most important performance parameters of your drive. Monitor your drives for long term drift, isolate problems quickly and automatically!

TOTAL ACCESS

P.O. Box 790276 Dallas, Texas 75379 214-337-4346 JCL for automatic execution of Help/JCL on boot-up.

Now press the orange reset button. TRSDOS loads Basic, loads and runs Helper/BAS, answers the prompt "Create new file?" with N, loads the file HELP1/BAS and leaves control with the Basic program.

Helper takes over from there by installing selected records with the CONFIG option. When it stops processing, the screen goes blank except for a blinking cursor. Press the enter key. TRSDOS will make a short housekeeping disk access to get the proper system overlay on board before releasing control to TRSDOS Ready.

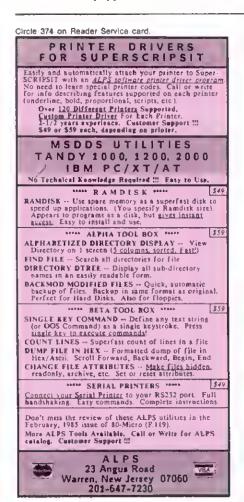

Note that an asterisk follows HELP1/BAS in the JCL file. A JCL command to load a Helper text file must have an asterisk as the file name's last character. Line 305 in the modified Listing checks for the asterisk indicating that a JCL file is loading the text file. Helper strips the asterisk before looking for the text file on drive zero.

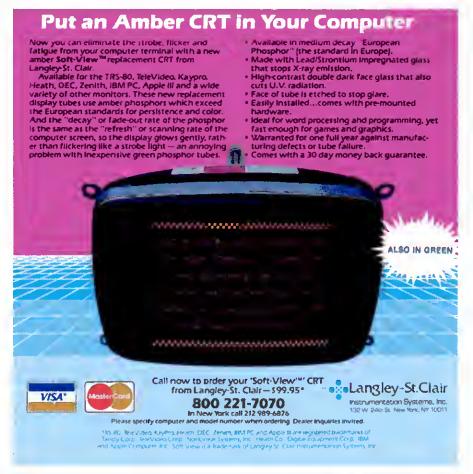

JCL files won't deliver information directly to an INKEY\$ loop. To surmount this problem, I used AM\$ = "C" in line 382 as a flag to answer the INKEY\$ loop's request for the CONFIG option. Use the asterisk only in the JCL file Itself.

If JCL files aren't your cup of tea, you can load Helper files automatically a second and much faster way. You can SYSGEN the system configuration in which a Helper file is currently installed. At TRSDOS Ready type in SYSGEN (YES).

This command writes your system's current configuration to a file called CON-FIG/SYS. It saves all background tasks (Helper is one) as well as all code above the HIGH\$ marker (where Helper records reside). Each time you cold start or reboot your computer, CONFIG/SYS restores the file exactly as it was the last time you used it. You don't have to reload the Basic program or install Helper records.

You should make sure the disk you SYS-GEN has enough free space to hold the entire Helper file. CONFIG/SYS is an invisible system file and wou't appear in your disk directory.

Using SYSGEN does have a drawback. Should you decide to load or change Helper files on a disk you've SYSGENed, press the reset button while holding down the clear key. This bypasses CONFIG/SYS so the configured Helper file (along with your system configuration) won't load. Trying to load Helper manually into a system in which it's already SYSGENed will cause a hang accompanied by a head-on system disk crash.

Routine Matters

Tables 3 and 4 describe Helper's key variables and program lines. Helper uses a machine-language background task to control display of its text records. TRSDOS 6.X's keyboard driver invokes the routine.

Address 2338, 0922 hex (hexadecimal), within the driver provides a call to a 3-byte

CONVERT MOD III BA IBMPC TAXIDY

If you own a TRS-80 Mod III and have resisted upgrading to the TRS-80 Mod 4, IBM PC, or Tandy 2000 because your software would not be compatible, good news has linally arrived. EMSI offers 3 powerful utilities for converting your Mod III BASIC programs to run on any of these new machines.

The programs are menu driven, very easy to use and automatically translate 95% or more of even your largest BASIC programs in just a lew minutes. They insert all required spaces between keywords, recalculate PRINT@ addresses (or replace them with LOCATEs), adjust TAB addresses, correct exponentiation symbols, eliminate unnecessary spaces, remove down arrows, optionally remove REM's, and flag and list unresolved line numbers. User guides explain program operation in complete detail, offer afternatives for revising lines that need manual intervention and numerous hints for easier, more thorough conversions

CONV3TO4

Converts TRS-80 Mod III BASIC to \$ 49.95 TRS-80 Mod 4 Hundreds of sahafted users Ask to see program review (three stars) at your local Radio Shack

CONVITORC

NEW!Converts TRS-80 Mod III BASIC \$139.95 to IBM PC*

Monday thru Friday - 9:00 a.m. to 5:00 p.m. Texas Time (Order Inquires/Customer Service) IN TEXAS: 817-573-4111

CONV3TO2000 NEW! Converte TRS-80 Mod III BASIC \$139.95

*Includes convenient diskette formatter and tile transfer program so that programs and files may be exchanged between machines without modems Diskettes and guides are packaged in deluxe three ring binders. User Guides available separately for those who want complete details before ordering entire package (\$5.00 cash or MO only, credited to subsequent package order)

jump vector (@KiTSK) starting at address 137, 0089 hex. @KiTSK is a design feature of the TRSDOS operating system that lets you chain an independent task with the keyboard driver.

At start-up, TRSDOS puts a Z80 return code in the first @KITSK address. Calls to @KITSK send execution right back to the driver. Helper modifies @KITSK to provide a jump to its own control routine whenever the keyboard driver is active. Helper monitors key closures as the driver

Helper monitors key closures as the driver monitors them. For an explanation of keyboard background task interfacing and the use of TRSDOS supervisor calls, see the Model 4 Technical Reference Manual.

Hints and Cautions

Model 4 Scripsit 1.0.1 doesn't particularly like Helper's encroaching on its territory and tries to overwrite the message as it appears. You can fool Scripsit by pressing the break key to move the cursor to the command line. While Scripsit waits for input, Helper has free access to the display.

Applications that use double-width characters also make the Helper record double-width. The record jumps outside its normal area on a double-width screen. It's a good idea to load Helper before activating driver/filter modules that the DOS puts in high memory. This ensures that Helper or its text records won't overwrite them. Also, you can't install Helper if you have Memdisk resident in a 64K machine.

John D. Wolfskill, an engineering instructor at the Naval Education and Training Center in Newport, RI, has been a TRS-80 hobbyist since the early Model I days. You can write to him at 201 Puritan Drive, Middletown, RI 02840.

NEW! HARD DISK FOR TANDY 1000*

Introducing The Rose* by OSICOM, Inc.

External Internal Controller, Drive in 10 MB enclosure with fan Controller, Drive and power supply Internal Cables, & Manual Cables, & Manual Controller, Drive Cables, & Manual 20 MB Tape External Backup Controller, Drive inenclosure with fan and power supply, Cables, & Manual

Easily user-installed-fully documented instructions.

System "boots" from hard disk without floppy diskette. Runs Lotus, DBASE II—and Tandy 1000 software. One year warrantee on all equipment.

TOLL-FREE technical support hat-line.

Orders and Information Call: 1-800-922-0881 TOLL FREE 201-540-0144 IN NEW JERSEY or Write:

18 Bank Street Morristown, N.J. 07960

COD no Surcharge. Visa & MC 3%, Amex 5%

Requires Memory Expansion Board with DMA Controller (25–1004).

Now you and your TRS-80 can team up for

HASSLE-FREE PROGRAMMING WITH LOAD 80

It's true

More TRS-80* pleasure and fewer programming headaches can be yours all year with **Load 80**. Load 80 comes in your choice of cassette or disk, and is filled with more than a dozen "ready to run" programs listed in **80 Micro**.

It's ready

"Ready to run" means the hard work has been done ahead of time! All you do is load and enjoy. No keyboarding hassles. No debugging.

Every Load 80 features the high-quality tutorials, utilities, games, and word-processing programs you've come to expect from 80 Micro. It has everything you need for enjoyable, practical, easy TRS-80 computing

A subscription to Load 80 is more than just a wise purchase. It's an investment! You'll be building your software library for a fraction of the cost of comparable programs sold in retail stores!

FREE assistance

Should you need assistance, the technical editors at *Load 80* and *80 Micro* will be ready to lend a hand. Hassle-free programming for you and your TRS-80 can begin right now with a year's subscription to *Load 80*. Simply return the postage-paid order card next to this ad, or call **TOLL FREE 1-800-258-5473**. In NH, dial 1-924-9471.

* TRS-80 is a registered trademark of Radio Sheck, a division of Tandy Corp.

Yes! Save me time and money with LOAD 80. Send me:

- ☐ 1 year of LOAD 80 on disk for \$199.97
- □ 1 year of LOAD 80 on cassette for \$99.97
- ☐ This month's LOAD 80 disk for \$21.47
- ☐ This month's LOAD 80 on cassette for only \$11.47

Prices include postage and handling. Foreign airmail please add \$1.90 per item or \$25.00 per subscription, U.S. funds drawn on U.S. banks only

☐ Check/MO ☐ MC ☐ Visa ☐ AE

Getting Ahead

Speed up prompt-driven Model III programs by answering queries ahead of time.

eyboard type-ahead is one of TRSDOS 6,X's features I like best. Once I've memorized a program's menus, prompts, and required responses, I can type them in ahead of time to speed up program execution. I find this much more satisfying than waiting for each prompt to appear on-screen.

I wish the Model III provided this feature, but it comes only with LDOS 5.1. I wrote a program, TypeAhead, that gives me type-ahead on my TRSDOS 1.3 disks (see the Program Listing). With a few changes, you can make the program run on a Model III cassette system as well (see below).

The Benefits of TypeAhead

A type-ahead feature is great because it lets you "store" data in the computer in anticipation of questions and prompts. Say, for example, you have a menu-driven data base management program. The first screen prompt looks like this:

- 1) Add entries
- 2) Search
- 3) Sort
- 4) Print

You select option 3. The second screen asks you if you want to sort by:

- 1) Name
- 2) Address
- 3) City

You choose option 1. Next, the program asks at what letter you want the sort to begin. You need only the last half of the alphabet, so you type in N and press the enter key. Then the program asks if you want the sort to include a second field. You do, so you type in 3. Finally, the sort begins.

```

If your system had a type-ahead buffer, you could load the data base manager and type in 3, 1, N, press the enter key, and type in 3. As the program encountered each question, it would automatically find the answers waiting for it. You could perform another task or ait back and wait for the finished sort, which is a lot less frustrating than waiting for the computer to ask questions you know by heart.

Assembling and Using TypeAhead

You can easily assemble TypeAhead with any EDTASM-compatible editor/assembler. Disk system owners should type in the source code exactly as it appears in the Listing. Cassette owners must make the following changes: In lines 130-250 use cassette equates instead of disk equates, and enter lines 700-730 as standard source code, not as comments.

Because TypeAhead initializes and relocates itself automatically, running the program is easy. Disk system owners can execute TypeAhead like any other /CMD file. Cassette users can execute Type-Ahead using the Basic System command.

Once you load TypeAhead in memory, it becomes a resident system program. Everything you do after that gives you the type-ahead feature, even if you enter Basic. You can only break out of it by resetting the computer.

How TypeAhead Works

I've fully commented TypeAhead's source code, so you don't really need a line-by-line description. However, I'll mention some of TypeAhead's highlights.

After you load TypeAhead, it executes its initialization and relocation routine. It relocates itself by adjusting any memory-dependent addresses and moving the program to protected high memory. Before moving to high memory, TypeAhead links with the Basic ROM's real-time clock and keyboard driver vectors, thereby gaining full control over the real-time clock interrupt and keyboard routines.

Once TypeAhead sets itself up, all realtime clock interrupts pass control to TypeAhead's real-time clock routine. This routine handles all keyboard scanning. Whenever a real-time clock interrupt occurs, the clock routine scans the keyboard to see if you're pressing a key. If you are, the routine puts the key's value in a high memory buffer.

Because real-time clock interrupts occur 30 times a second, you're limited to a maximum typing speed of 30 characters a second. Also, TypeAhead provides only 128 characters of buffer space. Whenever the buffer becomes full, TypeAhead stops scanning the keyboard. When buffer space again becomes available. Type-Ahead resumes the keyboard scan.

TypeAhead's keyboard driver extracts buffered keys and returns them to the

ROM. Whenever the program calls the keyboard driver, it checks the calling routine's return address. If the routine is the Basic interpreter loop, TypeAhead only returns buffered break and SHIFT@ values. Whenever the Basic interpreter loop isn't the calling routine, TypeAhead releases any buffered key value.

An Additional Feature

Besides providing the type-ahead feature, my program adds an auto-repeat function to the Basic INKEY string. It enables this feature by releasing only buffered break and SHIFT@ values. One application for this utility is in games where you use the arrow keys to move an object across the screen. With normal IN-KEY\$, you have to tap the key repeatedly to move the object. My program eliminates the tapping. You just press the key. and the character moves until you lift your finger.

However, if you run a program that has an INKEY\$ command that requires an alphanumeric response, be sure you don't press the key too long. You could end up storing responses in the buffer, and the next INKEY\$ in the program reads the buffer for its response. Thus, you could accidentally answer future prompts incorrectly. But, as long as you don't have lead fingers, this shouldn't be a problem.

TypeAhead's Limitations

Because I designed TypeAhead around the Model III ROM, it works fine with Basic. Regrettably, it might not work with all machine-language programs. TypeAhead should work with any machine-language program that recognizes high memory and performs keyboard input through Model III ROM routines. The only way to find out if TypeAhead works with a particular program is to try it. Simply put, it will either work or crash the system.

Also, TypeAhead scans the keyboard only during real-time clock interrupts, so you'll probably lose characters any time you disable interrupts or make disk or cassette input/output. Instructing the computer to RUN"APROGRAM/BAS while you're still loading Basic, for example, results in lost characters and a syntax error.

If you keep TypeAhead's limitations in mind, I think you'll find the program a welcome addition to TRSDOS 1.3 or Model III Cassette Basic.

5 MEG HARD DRIVE

There are firms which offer benefits, experience or products seemingly too good to be true. Now why would you want to expose yourself to unhappiness when Aerocomp has a proven record of thousands of happy, satisfied TRS-80 customers. Just take a minute to look through back issues of this magazine. You won't find many companies that have been around as long as Aerocomp. We fully support TRS-80 computers and most all operating systems including CP/M 2.2. Aerocomp leads the way to low hard disk prices so you can afford to enjoy the benefits of increased storage and faster disk I/O. These units are precision engineered, tested and delivered complete and ready to use, right from our stock. Each unit is guaranteed for one year parts and labor. You can count on us to be here if you should ever need us. As always, your satisfaction is assured with our 14 day free trial offer. If, for some reason, you are dissatified with our drive merely return it for a full refund (less shipping). How can you go wrong? Specify the softwere driver of your choice and start enjoying your computer's real capability. Do it today! Call our toll-free number now!

MODEL I DOUBLE DENSITY BOARD

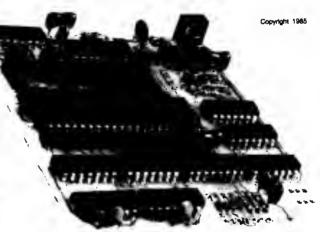

Add 80% more capacity to your disk system with the Double Density Controller (DDC) from Aerocomp.

The Story

Some products have what it takes to seem to last forevar. Our "DDC" is one of those products. What it does is allow you to operate your TRS-80 Model 1 disk system in double density. In this case double density names almost doubling the storage capacity of your diskettes. Single density, thats the way Radio Shack designed your Model I expansion interface, organizes your disk into 10 sectors per track. Each sector contains 256 bytes of data for a total storage capacity of 2,560 bytes or 2.5K per track times the number of tracks your drive is capable of adressing. Double density, on the other hand, writes 16 sectors per track each containing 256 bytes for a total of 4,608 bytes or 4.5K. That is 80% mora data in the same space. Why didn't Radio Shack do that in the beginning, you ask? Well it costs money to do double density because it is more difficult to do than single density and the data is harder to capture reliably. That means mora cost and the Model I was meant to be a low-cost computer for the masses. Therefore, no double density for the original Model I.

The Facts

Other companies introduced double density controllers for the Model I but they were not so good. We waited and waited but, even new models failed to correct problems with data separation that kept cropping up. So we went to work and came up with a new design to cure the old problem. At last! A double density controller for the Model I with a higher probability of data recovery than with any other double density controller on the markat then or since. Our analog design phase lock loop data separator has a wider capture window than the digital types the others use. This allows high resolution data centering. Our "DDC" analog circuit allows infinately variable tuning. The ettack and settling times are optimum for 5.25" diskettes. The off-stated fears of adjustment problems rumored by digital dilettantes have been proved groundless by thousands of satisfied users the world over. The bottom line here is state-of-the-art parformance and reliability.

ORDER YOURS TODAY

TRS-80 Model I disk system owners who are reedy for reliable double density operation will get 80% more storage per diskette; single and double density data separation with far fewer disk I/O errors; single density competibility; simple plug-in operation. You will need a disk operating system that has the necessary double density software. All the popular DOS's (except TRSDOS) have the drivers. We have put together two special packages in the event you don't already have one of the more popular DOS's.

DISK DRIVES

Aerocomp leads the way to the BEST value in disk drives and related peripheral products on the market today. Sound engineering, high performance, quality construction, no-risk free trial, outstanding warranty service and a reputation for doing the right thing make your decision to buy Aerocomp the correct one. Please look over our offerings and make your selection. When you have made your choice call our toll-free number and place your order. If you need assistance in making your selection, please call our information number. It's listed in the box at the bottom of this ad along with the technical assistance number for those of you who want to get right to the nitty-gritty. Thanks, we all appreciate your business and will continue to do our very best to support you.

BARE DRIVES AND SAIR

These drives are completely burned-in and tested for your ultimate satisfaction. Add that extra drive today! These are new factory drives. No blems, seconds or closeouts, Instruction manual included at no extra cost. Service manuais are available. See "Miscellaneous Goodies" for info.

Use your Aerocomp herdware product for up to 14 days, if you are not satisfied for ANY REASON (except misuse, damage or improper handling), return it (insured) in the original shipping container for a full purchase price refund, less shipping. Sorry, this offer dose not apply to software. Defective software will be replaced. Any hardware/software specials will be prorated and the software will be charged at the regular unbundled price. We have confidence in our products and we know you will be satisfied.

WARRANTY

We offer a one year warranty on parts and labor against defects in meterials and workmenship. In the event service becomes necessary for any reason you will find our service department fast, friendly and cooperative. We want to keep you happy. Out of warranty repelrs are also available.

100% BURN-IN and TEST

All our products are burned-in and fully tested prior to shipment. We want you to receive an item ready-to-go. AEROCOMP means reliability!

ORDER NOW!

Call our toll-free number service and place your order. Have your American Express, Mastercherge or Visa number ready. We will not charge your card until the day we ship your order. You may order by mail using your credit card, check or money order. Personal and company checks are benk printed and the signature exactly agrees with the name printed on the check. We will ship surface COD with no deposit but all COD's require cash or a cashier's check on delivery. Texas residents add 6% State Sales Tax. No tax collected on out of state shipments. Canadian addresses add \$20 to your order if over \$550 for customs documentation.

TRS-80 Model III & 4 DISK CONTROLLER and DRIVE KITS

Convert your cassetta Model III or 4 to disk operation with one of our complete kits. You receive our own advanced disk controller board with gold plated edge contacts capable of 4-drive operation; our own power supply; plated steel mounting towers completa with RFI shield plus all the cables and hardware necessary. Detailed instructions are included. All you need is a screwdriver and a pair of pliers. System kits come with 40 track single-side drives or just order the basic kit and pick the drives you want from the selection in the next column.

CONTROLLER KIT\$ 199 [Everything you need - less drives/DOS]
1 DRIVE SYSTEM319
2 DRIVE SYSTEM439
Add \$8 SAH MOUNTING KIT & POWER SUPPLY95
CONTROLLER GRD. ONLY110 RS-232 BOARD & KIT
POWER SUPPLY95 Add 38 SEH CONTROLLER BRD. ONLY110 RS-232 BOARD & KIT

OUR FAMOUS MODEL I STARTER PACKAGE

if you have a Model I and an Expansion interface this is what you need to get started with disks. Included is one 40 track single-sida disk drive completa with matching silver case and power supply, a 2-drive cable, a TRSDOS 2.3 disk operating system and TRSDOS manual plus all insurance and delivery charges to your door (lower 48 states).

Yours for only \$ 199

You can add our renown "DDC" double density controller to either the Radio Shack or the LNW Expansion Interface for 80% more storage capacity on your drive. Order it at the same time as our starter package above and we'll pay the shipping. Go aheed, you deserve increased density. See the opposite page for the istest technical details.

Made-To-Order Sorts

Writing a customized Basic sort is as easy as answering a few prompts.

hen it comes to writing sorts, once is not enough. You can easily write a quick Basic sort when you need one in a specific instance, but that takes care of only one case. Alternatively, you could write a general sort and store it on disk, but the conditions of a sort change: One day you might want records sorted from highest to lowest; the next day, from lowest to highest. Sometimes your records have three fields, sometimes six. While rewriting a sori program isn't hard, it's mindless busywork, and it often takes you longer to debug a sort than to write it.

My sort generator, Sorter, eliminates the busywork. It produces custom multi-dimensional sort programs for sequential files. All you have to do is answer a few prompts and Sorier writes a sort program to disk. You can use the sort directly or merge it with another Basic program.

Ordering Up Your Sort

To generate a sort, type in Sorter (see Program Listing 1), save it to disk, and run it. Your responses to 10 prompts determine the resulting sort's nature. The Photo shows a sample run: I'll explain each prompt briefly:

Enter A for alpha seq. N for numeric sequence?

If you type in A. Sorter sorts according to each piece of data's leftmost character. For example, Sorter would order the machine parts widgit, screw, and bolt this way:

> bolt screw widgit

If you type in N. Sorter right-justifies data before sorting it. This is necessary to produce a proper sort on numeric data. For instance, say you want to sort two pieces of data, 33 and 325. If the sort pro-

Photo. A sample run of Program Listing 1.

gram left-justified the data, the final sort would appear as:

325 33

which is incorrect. By right-justifying the data in a numeric sort, the program gives you the proper numeric sequence:

33 325

For descending sequence enter D?

If you type in D, the program sorts a file from Z to A and from highest to lowest number. Otherwise, Sorter produces output in ascending order, from lowest to highest number and from A to Z.

Enter number of fields?

Type in the number of fields that make up a single data base record. For example,

System Requirements

Models I, III, 4, 1000, and 1200 Disk Basic 32K RAM a data base comprising a date, a part number, quantity on hand, and quantity on order has four fields. Date is field 1, Part Number is field 2, and so on.

Enter maximum number of records in file?

This number need not be an accurate count as long as it's equal to or greater than the number of records in the file. The program uses this number to dimension the sort program's arrays and allocate memory. After you answer this prompt, the sort generator calculates and displays the amount of memory available for storing input data.

If garbage collection eliminator required enter Y?

Answering Y invokes a routine that circumvents the computer's garbage collection process, which Thomas Eggarter explained in "Quit Stalling" (November 1984, p. 86). I usually try to run a sori without the routine, as it increases input time slightly. However, if you're luw on available memory or your computer stalls during the input phase, you'll want to rebuild your sort with the garbage collection climinator invoked.

Enter key field position?

Your response to this prompt determines the field by which you want to sort. In the sample record above, you'd type in 2 if you wanted to sort by part number, since Part Number is the second field.

Enter maximum characters in key (field)?

The sort treats all key fields as strings, and it fixes the field's length at the number of characters you specify here. The number must be equal to or greater than the maximum number of characters in the key field.

Enter input file name?

Type in the name of the file you want to sort.

NOCONA ELECTRONICS • BOX 593 • NOCONA, TX 76255

Line	Description
20	Sets M to available memory limit.
30	Dimensions array and goes to subroutine to fill array with sort
	program lines.
60	Strips trailing comma or semicolon from input and print com-
	mands in generated sort.
70	Modifies L\$(7) from right- to left-justify for alpha sequence.
80	Changes S\$(4) from > to < for descending sequence.
90	Sets the number of fields within a record (F), the maximum number of records in the file (N), and calculates the amount of memory the resulting DIM instructions will require (A).
100	Sets M to a maximum of 32000 which the sort's Clear command uses.
120	Modifies L\$(7) by removing GOSUB30 and GOSUB40 to by-
100	pass garbage-collector elimination instructions.
130	Sets up L\$(1) with the Clear command using M as the number of bytes available to clear, and sets DL with the maximum number of records to read using F from line 80.
140-170	Sets up files and fields.
180	TS\$ is a temporary storage area that the sort program uses.
-07	The length is set to the maximum length of the sort key plus four characters for the tag.
190	Sets up the sort program's DIM command line for record fields
	to the maximum record count specified.
200	If the key field (KF) is the first field, the generated sort doesn't
	use L\$(6) and L\$(13) and the program skips to line 220.
210-230	Makes the generated sort input and print fields that fall before and after the key.
240	Sets the sort program's name (OL\$).
270-330	Writes the generated sort to disk.
350–680	The lines of the generated sort in Basic. The generator modifies them according to prompted input.
360-370	Part of the garbage collection citminator. Protects location of
	the next free memory byte from Basic and sets a temporary new top of memory and a new next free memory location.
380-390	Restores the Basic values changed in line 360.
400-430	Sets up locations for the temporary new bottom of memory and temporary next free memory bytes used in line 360.
440-510 520	Sort subroutine.
530	Becomes the generated sort's DIM command line.
540	Prints "Reading" and opens the input file. Sets the maximum number of records that the sort reads.
550	Inputs all fields that occur prior to the key field.
560	Reads the key, fixes the length, and assigns the sort's tag.
570	Reads any fields that occur after the key.
580	Checks if data remains in the input file after the maximum
500	number of records are read: if so, jumps to an error message.
590	Opens the output file.
600	Sets the maximum number of records the sort writes.
610 620	Sets (T) equal to the tag number assigned during input.
630	Writes any fields occurring before the key.
640	Pulls the tag off of the key field and writes the key field to disk. Writes any fields occurring after the key,
670-680	Error message fields.
	Table. Line definitions for Program Listing 1.

```
310 FOR Z=0 TO 4:PRINT 11, S$(Z):NEXT Z
460 S$(2)="30010 N%=N
470 S$(3)="30040 CMD"+CHR$(34)+"O"+CHR$(34)+", N%, A$(1)"
480 S$(4)="30050 RETURN"
Delete lines 00 and 490-510
```

Figure 1. Changes to use CMD"O" in sort. (Model III only.)

Enter output file name?

Specify the sorted file's name, If you type in the input file's name, the program warns you that the sorted file will overwrite the input file, and asks if this is acceptable. If not, you can type in a different output file name.

Enter sort name?

This is the name of the sort program you're generating.

Ready to Sort

After you've answered the 10th prompt, the sort generator prompts you to press the enter key to write your custom sort to disk.

Merging Sorter

Program Listing 2 shows a sample sort, called Sort I/BAS, that corresponds to the sample run shown in the Photo. The gencrator saves the sort program in ASCII format, so you can easily merge it with another program.

To merge a sort, first make sure its line numbers don't conflict with your main program's. Then, with the main program in memory, type in MERGE "SORTER". If you use the sort as a separate program, resave it in standard, compressed format for better speed. To do so, type in SAVE "SORTER".

When Things Go Wrong

The sort generator and the finished sort program display error messages when they encounter inconsistent or incorrect input. If the number of records combined with the number of fields reduces available memory to fewer than 1,000 bytes, the sort generator informs you "Too many messages for memory size" and prompts you to start over.

If your response to the prompt for the number of sort fields (prompt 6) falls outside the number of fields you Indicated, (prompt 3). Sorter displays the error message "Key (field) not within field, try again."

In the sort program itself, you'll encounter the message "Reached max record count before EOF" if the input file contains more records than you specified. If the sort finds a key field with more characters than you specified at prompt 7, it displays the field along with the message, "Key field longer than expected."

You'll see the error message, "Data entered work area, output will be garbled" only if you use the garbage collection eliminator. The error occurs when the eliminator, which requires 500 bytes, plus the input data, exceed the program's allotted string space. A possible solution is to change line 50 from WA = 500 to WA = nnn, where nnn is a number less than 500 (see Listing 2). However, using a number less than 100 increases the input time dramatically.

One Sort or Another

The Table explains key lines in Listing 1. The sort routine, lines 440-510, uses an algorithm known as the Shell-Metzner sort. You can replace the routine with another sort if you want; Model Ill owners can substitute the CMD"O" function (see Figure 1 for instructions).

If you use a different sort, be sure to change line 310, which writes the routine to disk. Also, delete line 80, which arranges the output in descending order; this would foul up a different sort routine.

Figure 2 lists modifications to Listing 1 for the Models 4, 1000, and 1200.■

Robert G. Wilson started programming in 1957 on the UNIVAC Model 1, and he has worked on a number of systems since then. He's currently an independent management consultant. You can write to him at 143 Elm St., Georgetown, MA 01833.

TO YOUR PORTABLE* AND GET ADD THE DESK TOP COMPUTER PERFORMANCE

SOFTWARE FEATURES:

- The industry standard CP/M 2.2TM operating system. which provides for access to all popular CP/M based software (including dBASEIITM, SupercalcTM, and T/MakerTM).
- Complete Utilities Package includes:

Filer - A menu driven LOAD/STORE program for transferring individual tiles (or total memory) to disc

Modem - Public domain communications package (both terminal and disc file transfer modes)

Utilities - DISKCOPY, COPY, FORMAT, and CP/M Utilities.

- Lightweight (4.5 lb.) battery powered 3.5 inch microfloppy system.
- 360K bytes/diskette (same as on the IBM PC).
- Approximately 20 hours on a single battery charge assuming normal disk access.
- 32K bytes additional RAM in the PICDISC converting your portable to a 64K byte CP/M 2.2 microcomputer.
- · Includes all cables, mounting hardware and battery charger.

Complete Hardware/Software System described above — Only \$599

SAVE ON POWERFUL INTEGRATED SOFTWARE when purchased with PICDISC:

T/Maker — an integrated software package that provides:

Word Processing

- Spreadsheet
- Relational Database Manager

Spelling Checker with a 50,000 word Dictionary

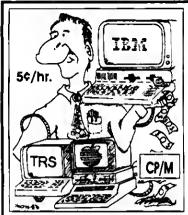

Complete System above with T/Maker for \$799

(T/Maker sold separately for \$300)

*Immediately available for the TRS-80 Model 100 (portable must have 32K bytes RAM) and the NEC8201 and OLIVETTI OM-10 pending FCC approval.

NEW And IMPROVED CP/M-68K

Treat your TRS-80 Model-16 or Enhanced Model-II or -12 to our new Version 1.2 CP/M-68K, now with:

- Keyboard Typeahead
- C compiler with standard and IEEE floating point
- Overlay loader
- New utilities
- 68000 assembler

Option languages* — CBASIC-68K, PASCAL MT+, FORTRAN-77, PASCAL-68K, BASIC-68K

Version 1.1 users; order a language and receive your version 1.2 upgrade FREE. Upgrade alone only \$25.

Trisoft

4102 Avenue G Austin, Texas 78751 (512) 453-2233

*Requires 256 kbytes minimum except for BASIC-68K

Run-O-Matic

No need to bother with cumbersome DOS commands to load programs—Autorun executes programs at the touch of a key.

I fyou'd rather not indulge in the delights of sundry technical commands to get your favorite Model 4 game or accounting program up and running, Autorun offers an easy solution. Autorun displays a list of the programs on your disk and lets you load them with a single keystroke. It works with all files that have /BAS, /CMD, and /JCL extensions, or any other extension you specify in the program.

Once you install Autorun on your system disk, it automatically runs when you boot up TRSDOS 6.X. The program prompts you for a drive number, then displays a selective directory of the programs on that drive. You load a program or job control language (JCL) file by positioning the cursor over that file and pressing the enter key.

Installing Autorun

installing Autorun under TRSDOS 6.X is a two-step process. First key in the Basic code in Program Listing 1 and save it to disk as Autorun/BAS.

Then set up an auto-boot command on your DOS disk by entering the following line at TRSDOS Ready: AUTO BASIC AUTO-RUN/BAS (M=55295). This command ensures that when you boot TRSDOS 6.X. Basic automatically loads with an upper memory limit of 55295 (D7FF hexadecimal) before running Autorun. The program requires some reserved space in high memory to read in the disk directory, as you'li see.

Autorun makes assumptions about the way you name files on disk. It assumes JCL file names end with the extension /JCL, that command files end in /CMD, and that Basic program names carry the /BAS extension or have no extension. I recommend that you give Basic files the /BAS extension, however.

Up and Running

Autorun operates with a minimum of effort. At the first prompt, you enter a drive number between zero and 7 or press the E

Photo. Sample Autorun display.

key to exit. (Note that you don't need to press the enter key to execute a command.)

Autorun then reads the disk directory for the apecified drive. If it can't read the drive (e.g., if you specify a nonexistent drive or have an unreadable disk), Autorun displays a "Drive not available" message and asks you to try again.

Then Autorun displays a list of Basic, command, and JCL files on the disk at six files per line. If the disk contains no such programs, Autorun displays the message "No suitable files found."

Autorun highlights the first program in the directory in reverse video. Use the arrow keys to move the highlighting cursor to select a specific file, and then press the enter key. Press the R key to restart Autorun (see the Photo).

Program Mechanics

The Table provides a line-by-line description of Autorun. When you select a

System Requirements

Model 4 Basic TRSDOS 6.X Basic program. Autorun returns to TRSDOS, reloads Basic without setting any high memory limit, then runs the program (e.g. BASIC MYPROG/BAS:1). For command files, Autorun returns to TRSDOS and invokes the program by issuing its name as a command (e.g., PIN-BALL/CMD:0).

For JCL files. Autorun returns to TRSDOS and issues a Do command with the equals sign control character (e.g., DO = STARTUP/JCL). It assumes that you've already compiled the JCL file or that it doesn't require compilation.

Customizing

Autorun makes assumptions about your programs that might not be true in all cases. For example, some Basic programs (including Autorun) require that you set a high memory limit, and some command files need specified parameters (COMM /CMD on your TRSDOS 6.X disk, for instance).

Autorun can't cater to all of those, so you might want to ensure they're excluded from Autorun's directory list. Here's how to tailor Autorun to your system.

You can exclude nonstandard programs two ways. The simplest is to make each file invisible, since Autorun displays only visible nonsystem files. To do this, use the ATTRIB command at the TRSDOS level. For example, to make PROGA/BAS invisible, type in ATTRIB PROGA/BAS (INV). PROGA/BAS won't appear in a normal Directory command unless you use the invisible option (e.g., DIR:1 (INV)).

If this is undesirable, you can exclude programs by modifying Autorun. Look at line 190 in Listing 1, and you'll see one such example: This line ensures that Autorun/BAS doesn't appear in the selective directory list.

To exclude PROGA/BAS, add line 191 to read: IF PROG\$(PROG) = "PROGA/BAS" THEN 250. Add as many lines as necessary

Line	Description
10	Initialization (see lines 430-520).
20-50	Obtains drive or exit option.
60-70	Reads directory, checks success.
80-100	Formats screen, initializes pointers.
110	Begins processing directory entries, stops if it already has 126 or if it has reached the end of the directory in RAM (marked by an X'FF byte).
120	Eliminates system and in visible files.
130-180	Builds a file specification from RAM directory entry.
190-230	
240	Displays file specification.
250	Steps to next directory entry in RAM.
260	Returns to beginning if no files found.
270-290	Completes list, creates high- light cursor.
300-380	Moves highlight cursor as required by arrow keys.
390-420	
430-520	

to exclude special-requirement programs.

I noted earlier that Autorun assumes that file names without an extension are Basic programs. If that's not the case and you'd like to exclude such files from Autorun's directory list, delete line 200.

The Subroutines

End

Although Autorun primarily comprises Basic code, it uses two small machine-language routines built into Data statements in lines 470 and 480, See Program Listing 2 for these Assembly-language routines.

The first routine (stored between X'D800' and X'D80E') reads the disk directory into a RAM buffer that Autorun uses to select the files it displays on-screen. Autorun does this with the @DODIR SVC call to TRSDOS 6.X (see the Model 4 Technical Reference Manual for more details).

The manual also details the layout of the directory. Each directory entry is 18 bytes long. The file name appears in bytes 5-12 of each entry, with the extension in bytes 13-15 (note lines 140-180 in Listing 1).

Byte zero of an entry indicates certain file attributes: Bit 6 is on for system files, and bit 3 is on for invisible files (note line 120 of Autorun/BAS).

CONVERT YOUR TRS-80 MODEL III OR 4 INTO A

DEVELOPMENT SYSTEM

Now you can develop Z-80 based, stand-alone devices such as games, robots, instruments and peripheral controllers, by using your TRS-80 as a development system. The DEVELOPMATE plugs into the expansion connector of your TRS-80 and adds PROM PROGRAMMING and IN-CIRCUIT-EMULATION capabilities to your system.

Complete instructions and sample schematics are included to help you design your own simple stand-alone microcomputer systems. THESE SYSTEMS CAN BE AS SIUPLE AS FOUR ICs: one TTL circuit for clock and reset, a Z-80, an EPROM, and one perinheral interface chip.

When the In-Circuit-Emulation cable is plugged into the Z-80 socket of your stand-alone system, the system becomes a part of your TRS-80 You can use the full power of your editor/assembler's debug and trace programs to check out both the hardware and the software. Simple test loops can be used to check out the hardware, then the system program can be run to debug the logic of your stand-alone device.

Since the program is kept in TRS-80 RAM, changes can be made quickly and easily. When your stand-alone device works as besired, you use the Developmate's PROM PROGRAMMER to copy the program into a PROM, With this PROM, and a Z-80 in place of the emulation cable, your stand-alone device will work by itself.

The DEVELOPMATE is extremely compact. Both the PROM programmer and the In-Circuit-Emulator are in one small plastic box only 3.2 \ 5.4'. A line-plug mounted power supply is included. The PROM programmer has a personality module, which defines the voltages and connections of the PROM so that future devices can be accommodated. However, the system comes with a universal personality module which handles 2758.2508(8K), 2716.2516(16K), 2532(32K), as well as the new electrically afterable 2816 and 48016(16K EEPROMs).

ONE MEGABYTE MEMORY

For Model 1, 3, and 4

Yes! You can now have 1 million bytes of accessible memory in the model 1, 3, and 4. You can now have a memdisk larger than a double side 80 track drive. Price starts at \$269 for the first 256K including the memory. Additional memory can be added at any time in 256K increments. Memory is installed inside the computer. Call or write for more details.

<u>SuperMemdisk</u>—Lets you use the 128K for applications and still use the extra memory for a RAMDISK. 192K for the 256K version or 386K for the 512K version . . . \$49.95.

Reach for the height of

KAMAS, ZBO, & CP/M are tradematiks of iCAMASOFT*, Zllog, & Digital Research respectively. * formerly Compusophic Systems

Get your hands on KAMAS now Send \$147 plus \$4 for S/H Or call [503] 649-3765 for VISA or Master-Card orders KAMAS is available for many Z80, CP/M computers. Ask about your system.

KAMASOFT* 2525 SW 224th Ave., Dept. 151 Aloha, OR 97006

As an ideo craftsman, you use your mind like o skilled pair of hands. You toke hold at concepts, then manipulate them to discover, refine convey dynamic new thoughts

Now the fool that can strengthen your creative grasp is well within your reach.

KAMASTM a revolutionary authine processor from KAMASOFT*, supports your thinking process and keeps you in fouch with your ideas. That's because KAMAS is designed to work the way your mind warks—naturolly.

Begin by broinstorming KAMAS enables you to jot down ideas quickly, as you think of them. If you want to elaborate, you can add text with full screen editing. Then develop your ideas using a familiar outline format. Change the structure as easily as you change your mind. Move on idea and all attached text moves.

KAMAS puts full control of your fingertips. You can keep track of your main line of thought by collapsing the details from view. Then, expand the outline to develop the specifics when you need to By collapsing and expanding partions of the outline, you can maintain an overview and literally see how your ideas fit together And KAMAS is fost. Your Ideas remain at your tingertips KAMAS con locate and retrieve by keyword-even a misspelled one—in less than a second per fopic file

Use as much of the power os you feel comfortable with, KAMAS is menu-driven with over 100 on-line help screens. But you con also open the hood to find a high performance programming environment with the additional horsepower you may need to get the job done. An active user community and the KAMAS Repart newsletter keep you in touch with the latest KAMAS opplications.

Achieve a commanding vanfage point.

...with **KAMAS**

When setting up the RAM buffer, you must allow for a maximum of 126 files on a standard Model 4 nonsystem disk, excluding the special files Boot/SYS and DIR/SYS. In practice, you won't normally reach this limit unless some files are null.

The protection of X'D800' and above for running Autorun is arbitrary; Listing 2 shows that there's free RAM above the directory buffer. I did this to avoid clashes with TRSDOS memory allocation for KSM files, SYSRES modules and so on.

The second machine-language routine, located between X'D80F' and X'D817'. uses the @CMNDI SVC to pass commands to TRSDOS. Autorun invokes it at the end of the program (line 420) to execute the required program run. Although you could use the Basic System command, it would require an immediate return to Basic that's not suitable for Autorun.

Note that @CMNDl requires that you terminate the supplied command with a X'0D' byte, equivalent to the enter key.■

You can reach Alan D. Smith at P.O. Box 119, Mortdale, N.S.W. 2223, Australia.

Signs Of the Times

A sign blaring "FREE SOFTWARE" would certainly attract attention at a trade show. This month, I'll describe how to build and operate such a remote display. It displays 16 alphanumeric characters and works with a standard RS-232C port so you can use it with virtually any microcomputer. And since you can control the display through a modem, you're not distance-limited by a tangled control wire.

The board (see the Photo) uses an 8250 UART (universal asynchronous receiver/transmitter) as the serial interface controller and an 8748 single-chip microcomputer as the diaplay controller. The 8748 also sets up the 8250 for operation and processes the characters the 8250 receives. A description of the RS-232C interface and the operation of the UART appears in the January 1984 Project 80 (p. 197).

The board also requires two Hewlett-Packard HDSP-6300 eight-character, 18-Segment LED (light-emitting diode) alphanumeric displays and the Texas Instruments AC5947 ASCII-to-18-segment decoder/driver chip. Figure 1 shows a block diagram of the remote display board.

The 8250 UART

The 8250 UART has a few features that make it an appropriate choice for this project, namely its internal register address latching (using its ADS/ signal), an internal software-controlled baud rate generator, and a CSOUT signal that indicates when the device is selected.

The 8250 has 10 internal registers, though some are read- or write-only. These registers handle the serial data format (i.e., number of data bits, odd, even, or no parity, number of stop bits, and so on), the modem control lines (RTS/, DTR/, and so on), and the baud rate generator frequency. They also let you monitor various status conditions, send and receive data, and enable certain interrupt conditions, if desired.

The 8748 sets up the board's UART parameters for 7 data bits, 1 stop bit, and no parity. You should use these parameters when sending characters to the 8250 (although you could send more than 1 stop

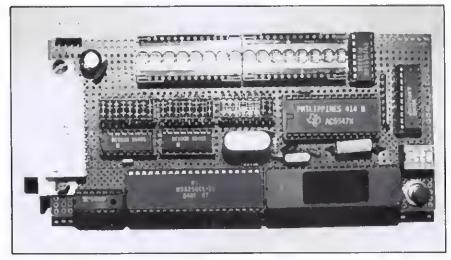

Photo. Remote display board.

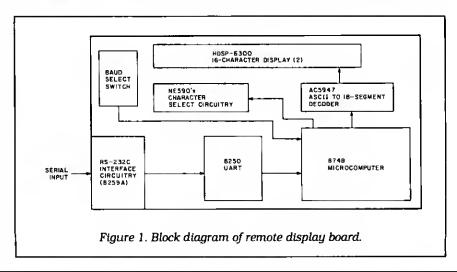

bit if you wanted). The 8748 also sets the baud rate by reading the configuration of the external DIP (dual in-line package) switch, which indicates the desired baud rate. The 8748 looks up the appropriate divider value in a ROM table and sends it to the 8250 to generate the appropriate baud rate frequency (X16).

The HDSP-6300 Alphanumeric Display

Hewlett-Packard's HDSP-6300 18-segment alphanumeric display consists of eight separate digits, each containing 18

segments in the configuration shown in Fig. 2. This configuration displays the 64-character 6-bit ASCII character set (uppercase alpha characters as well as numbers and special symbols). All eight corresponding anodes for each of the 18 LED segments are connected in common and to a pin on the display (18 anode connections in all). Each character has its own common cathode character-select connection.

The display is designed to operate in a multiplexed configuration. Each character is turned on for a predetermined

TRS-80 Hard Disk Subsystem Features*

- * All sizes rated after formatting
- * TRS-80 Models 1,3,4, and 4P supported
- * Your choice of DOSPLUS, LDOS, or TRSDOS 6 x Software Drivers included.
- * Newdos 80/Version 2.5 Systems available.
- * Up to two secondary drives may be added.
- * Error checking and correcting controller.
- * Buffered seek drives for improved access time.
- Built in power up diagnostics.
- Drives use plated media for long disk life.
- * Heavy duty power supply
- * Fan cooled
- Gold connectors used throughout for high reliability.
- 1 year warranty

Shop and compare. Hard Onve Specialist has been building hard drive systems for years and have sold thousands of subsystems to satisfied TRS-80 customers. We fully support TRS-80 Models 1,34 and 4P computers on available hard drive operating systems. We use the latest state-of-line-art drives and controllers. Our drives all use buffered seek logic and plated media to result in almost one-fourth the average access times found on our competitors drives. Plated media results in longer platter life and high resistance to heed crashers not found on context media drives. We utilize high construction throughout including heavy duty power supply, cooling fan and gold edge card connectors. We back our drives with a one-year parts and labor warranty and we're so sure that you'll like our drive that two offer a thirty day money back guarantee. So when it comes time to buy look beyond the price and choose the best drive. After all, we are the Hard Drive Specialist.

HDS Multiplexer

\$1295.

The HDS Multiplexer allows the useage of up to 4 Model III or IV systems using Dosplus 3.5, LDOS, TRSDOS 6.x, and DOSPLUS IV on a HDS Hard Drive. The standard package includes the Master Control Unit, Host Adapters for 2 Computers and 40' of cable. Each additional Host adapter add \$150. Each additional foot of cable add \$1, up to 100 feet per computer.

Model 3/4 Boot Rom \$39.95

Allows you to boot directly from a HDS Hard Drive using DOSPLUS. Versions available for useage with and without Multiplexer.

amount of time, turned off, and the next one is turned on. This happens so quickly you can't detect it. This is the same display method calculators use.

The T.I. AC5947 ASCII Decoder/Driver

The Texas Instruments AC5947 is a key chip in the remote display board. It turns on the correct segments of the currently selected 18-segment digit, based on the 6-bit ASCII character latched into the device (see Fig. S). Since it only supports 6-bit ASCII characters, you can't get lowercase; the 8748 software converts all incoming lowercase characters to uppercase.

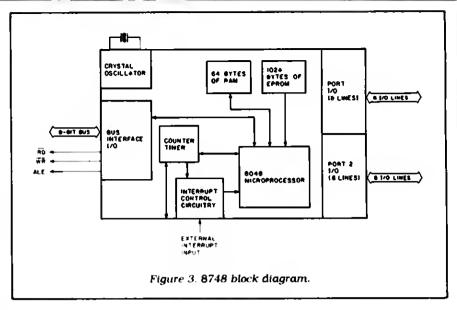

I could have eliminated the AC5947 and replaced it with simple latches, but I would have had to control the segment combinations for each character through aoftware. Since this function was already available in an inexpensive device (under \$5), I chose the least-work approach.

The 8748 Single-Chip Microcomputer

The block diagram for the 8748 is shown in Fig. 3. The 8748 is a version of the 8048 microcomputer which has on-chip EPROM instead of mask-programmable ROM. While the microprocessor portion of the 8748 is primitive by to-day's standards (even in comparison to the 280 or 6502), it is sufficient for many simple control applications.

The 8748 has 1,024 bytes of EPROM, 64 bytes of RAM, one counter/timer. 24 general-purpose input/output (I/O) lines, three additional apecial input lines, an on-chip cryatal oscillator (requiring an external crystal), interrupt control for a timer interrupt and one external interrupt, and a limited ability to access additional external program memory, data memory, and I/O.

Unlike traditional microprocessors (e.g., the Z80), which use the popular von Neumann architecture, the 8748 uses the less-common Harvard architecture. Von Neumann architecture involves having both program and data

COPYCAT B

NOW YOU CAN DUPLICATE VIRTUALLY ALL OF YOUR TRS-80 DISKETTES

COPYCAT 3 will allow you to make an exact duplicate of virtually all of your diskertes even if they are protected. And this includes your games and utilities. COPYCAT 3 automatically analyzes, formats, copies and verifies each track of the diskette you are duplicating. The entire process is amazingly fast, typically less than 70 seconds and even less with verify turned off.

COPYCAT 3 is intended for your personal use only, in making backup copies of your protected software.

COPYCAT 3 will run on the TRS-80 Model 3, 4 or 4P computers.

Please add \$2.00 for postage and handling. CA residents add 6% sales tax. All orders are normally shipped the next business day via first class mail.

Grafyx Solution™ Save \$100.00

High-Resolution Graphics for Mod 4/4P/III

Superior Hardware. The Grafyx Solution provides 153,600 pixel elements which are arranged in a 640 × 240 or on the Model III a 512 × 192 matrix. Hundreds of new business, personal, engineering, and educational applications are now possible. The hi-res display can be shown on top of the standard display containing text, special characters, and block graphics. This simplifies program debugging, text labeling, and upgrading current programs to use graphics. The Grafyx Solution fits completely within any tape or disk based Model 4, 4P, or III. Installation is easy with the plug-in, clip-on board.

Superior Basic. Over 20 commands are added to the Basic language. These commands will set, clear or complement points, lines, boxes, circles, ellipses, or arcs. The hi-res screen can be printed on any of 20 popular printers or saved or loaded to disk without leaving Basic. Areas may be filled in with any of 256 patterns. Sections of the screen may be saved and then put back using any of five logical functions. Labels can be printed in any direction. The viewing area can be changed. The entire screen can be complemented or cleared. Graphics Basic provides dot densities of 640×240 , 320imes 240, 160 imes 240, and 160 imes 120, all of which can be used in the same display.

Superior Software. The board comes with over 40 programs and files which make it easier to use, serve as practical applications, demonstrate its capabilities, and serve as programming examples. The software works with TRSDOS 1.3, 6.1.2, 6.2, LDOS, NEW-DO580, and DOSPLUS. The Grafyx Solution is also supported by a number of optional applications programs: Draw, Bizgraph, xT.CAD, 3D-Plot, Mathplot, Surface Plot, Biorhythm & U5A, Music,

The Grafyx Solution package is shipped complete for \$199.95 (reduced from \$299.95). A manual for review is \$15. Payment may be by check, Visa/MC, or COD. Domestic shipping is free on pre-paid orders. Texas residents add 51% tax.

Micro-Labs, Inc. 214-235-0915 902 Pinecrest, Richardson, Texas 75080

It's apparent why today's processors use the von Neumann approach.

Figure 5. AC5947 6-bit ASCII character set.

are a Listing Program that controls the semate display

memories uniform, where the processor can access them with the same instructions. Indeed, a program running on a von Neumann-type processor could even modify itself.

In contrast, the Harvard architecture separates program memory and data memory. It uses different instructions to access the different memories and it's designed so that programs can't modify themselves. While the Harvard approach is probably the better choice for a simple microcomputer with limited resources, it quickly becomes apparent why today's processors use the von Neumann approach more widely.

(The 8748 will likely appear in future Project 80 projects. For those of you who are interested, see the references section at the end of this column for more information.)

I needed an assembler to write the software for the computer. I found one: an 8748 assembler from Mumford Micro Systems (Box 400, Summerland, CA 93067, 805-969-4557). It works well, and I recommend it. Although the assembler normally sells for \$125, Mumford Micro Systems agreed to make it available to Project 80 readers for \$50 during the month this column appears.

Building the Display Board

Figure 4 shows the schematic for the remote alphanumeric display board; the parts list appears in the Table. The HDSP-6300 displays' 26 pins fit nicely into a 28-pin socket. They're designed to fit together edge to edge to create a longer display. Together with the two 28-pin sockets for the displays, you'll need two 40-pin sockets, three 28-pin sockets, one 20-pin socket, two 16-pin sockets, and two 14-pin sockets for the integrated circuits (ICs). If you put your resistors on component carriers as I did. you'll also need three additional 16-pin sockets.

The interconnection between the 8748 and the AC5947 and 8250 devices is straightforward. All four buffers of the 1489A RS-232C receiver chip are shown connected, since the 8250 has input support for the various modem control signals. As currently designed, however, the 8748 software uses only the receive

PROJECT 80

need a 0.1-inch matrix prototyping board with at least 15 square inches of circuit area, and a +5-volt power supply at 500 milliamps.

Operating the Dispiay Board

The reset circuitry at the RESET/ input of the 8748 generates a reset whenever you apply power or press the reset button. The 8250 also resets at these times, and the 8748 must initialize it for use.

The 74LS245 that appears between the 8748 and the 8250 is merely used for data bus buffering and isolation. Without the 74LS245, the 8250 could corrupt the data lines during the time the 8748 tries to put an address on the lines. For proper operation, you need the 74LS245.

The Assembly-language program that controls the 8748 is shown in the Program Listing. The 8748 then clears the display buffer (to ASCII blanks) and initializes the 8250 to receive characters with 7 data bits and no parity. It also sets the 8250's internal band rate generator to the rate determined by the value on the DIP switches. On reset, all the 8748 I/O lines go high (or become inputs). Since this includes the port 2, bit 7 line to the NE590s, the NE590s are disabled at reset. This is important since some of the LEDs on the HDSP-6300 displays could be damaged otherwise.

Once you initialize the display buffer and the 8250, the program writes the value OFF hexadecimal (hex) to the timer and the timer kicks in; it also enables timer interrupts. An interrupt then occurs within 80 microseconds (the internal clock time to the timer).

Meanwhile, program execution continues into its Main section, continually checking the UART for a character input. If one occurs, the program checks to make sure the character's valid (either above 1F hex or equal to OC hex [control-L], the Clear Screen command). The program ignores invalid characters.

When the program gets a valid character, it converts it from lower- to uppercase if necessary, then stores it in the next display buffer location. If the program finds the display buffer full, it moves the display characters left one position to accommodate the new character, simultaneously losing the leftmost character.

The entire responsibility of the Main program section is to look for and process incoming characters. All other 8748 processing activity (mostly display updating) takes place under timer interrupt servicing, in the PRCTMR timer service routine. As mentioned, I designed the HDSP-6300 displays for multiplexed operation. Each LED segment has both an absolute current limit and an average current limit. I chose the current-limit.

Position crystals and associated circuitry close to where you'll connect them.

data pin (pin 2 on the DB-25S). The inputs to the 1489A receivers connect to a right-angle DB-25S connector, and are specified in a DCE (data communication equipment) configuration. If you were to connect to a DTE (data terminal equipment) device, such as a standard terminal, you'd have to do so with a straight-through RS-232C cable, connecting pins 2-2, 3-3, 4-4, and so on. A cable with only pins 2 and 7 connected through is all you need to run this board, since the remaining signals are optional and currently unsupported.

The connections between the AC5947 and the HDSP-6300s may be a bit confusing. Each of the AC5947's 18-segment outputs must connect to a unique 36-ohm current-limiting resistor. You then connect the other side of each reststor to the appropriate segment pin on both of the two HDSP-6300 displays. For example, the B segment line (pin 8) of the AC5947 connects to a 36-ohm resistor, the other side of which connects to pin 23 (the B segment pin) on both of the HDSP-6300 displays. Be careful on the numbering of the HDSP-6300 pins; since it's a 26-pin device, one row of pins numbers from 1-13, while the other row numbers from 14-26. Also, don't inadveriently count the unused two legs of the 28-pln socket when searching for a pin.

Only three of the switches on the fourposition DIP switch connect to the 8748. The 8748 software reads these to determine which baud rate to select. The schematic shows the switch settings for the various baud rates available, as currently decoded by the software. Be careful when connecting the DIP switch; the switches are numbered 1-4 from left to right; the rightmost three form the binary baud rate select value.

The schematic includes power and ground connections for the ICs. You should position crystals and associated circuitry as close as possible to where you'll connect them. You need to put three 0.1-µF decoupling capacitors on the board, across the power and ground pins of their respective chips, as close as possible to the power pins.

Besides the items listed in the parts list and the sockets mentioned above, you'll

If you'd like the convenience of numbered, titled pages when you print out a Basic listing, merge this six-line utility with the program. When you run the merged program, the utility prompts you to type in a name, then lists the program to the printer. The program name appears on each page along with the system date, the pages are numbered, and blank lines appear between program lines. Program lines longer than the printer's maximum line width will generate spurious line feeds; split long lines or embed down-arrows where Basic accepts blank spaces.

Thomas P. Eggarter San Luis, Argentina ing resistors to provide a bright display while being multiplexed at approximately a 100-Hz character refresh rate. If any digit were left on for a prolonged period of time (one millisecond or longer), the lighted LED segments would probably suffer damage.

The software invokes a timer interrupt every 640 microseconds. At this time, the PRCTMR service routine turns off the currently lighted character by setting bit 7 of port 2, thereby deselecting the NE590 devices.

The program then writes the ASCII value for the next character to be displayed to port 1, to appear at the inputs to the AC5947; port 1, bit 6 is low at this time, to permit the program to latch a new ASCII value in the AC5947. After it writes the ASCII value to port 1, it sets bit 6 of port 1, latching the ASCII value into the AC5947.

The AC5947 then turns on the appropriate segment outputs. The program updates the character multiplex counter in 8748 memory and writes the multiplex value to turn on the new character to port 2. It then clears port 2, bit 7 to turn on the new character. This process repeats every 640 microseconds.

Montezuma Micro CP/M*

RETAIL VALUE \$1354

WordStar*

DataStar*

ReportStar"

CalcStar™

We have put together special bundles of software just in time to save you a bundle of money. Didn't you ever wonder why CP/M was so popular? The reason is the software availability. All programs (except EP) are for the Model 4/4P and have been optimized to install and run without hassle. For example, we have memory-mapped WordStar® and it runs circles around the standard version available elsewhere. We also added printer drivers for the Daisywheel II and the DMP-2100. Dur CP/M* 2.2 is the best around. Read the reviews. You know the programs. You know the prices. This is the years' best value. You owe it to yourself to let these CP/M^o programs and thousands of others (many in the public domain) start serving your needs.

Taking the Fast Track With GOSUBs

subroutine is a collection of Basic code designed to do a special job. It can be anything from a one-line timing loop to a huge collection of Basic that does open-heart surgery on a program in progress. You can identify a subroutine by two statements: GOSUB, which sends program control from any line to the first line of a subroutine, and Return. which returns program control to a point just past the GOSUB.

Before I go into detail, let me set down three rules governing subroutines:

- 1. If a set of events happens more than once in a Basic program, put it in a subroutine. You'ii save bytes and typing time.
- 2. You should keep large Basic events triggered only by if... Then tests in subroutines so they don't slow the program when you don't need them.
- 3. If you are programming for your own use and your program works, disregard the first two rules. I've destroyed many a nice sloppy program trying to pare it into Spartan ele-

The Naked GOSUB

GOSUB means "Go to the subroutine." Here it is completely naked:

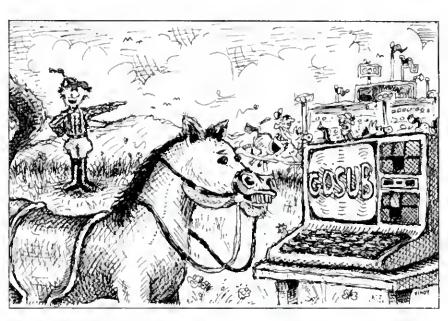

100 GOSUB 120 110 END 120 PRINT "Line 120 reporting for duty!" 130 PRINT "Line 130 reporting, too!" 140 RETURN 150 END

Line 100 contains the GOSUB statement followed by a line number destination, 120. This transfers program control to line 120. The program then carries out all instructions—the Print statements in lines 120 and 130-until it finds the Return statement in line 140. The Return sends the program back from whence it came, where it continues on to line 110.

You might ask why you couldn't use GOTO 120 instead, and then replace the

BASIC TAKES

Return in line 140 with GOTO 110. In this simple example, the results would be the same. But often you'll find that GOSUBs are far more flexible. They differ from GOTOs as much as yo-yos differ from bows and arrows. For example, a GOSUB lets you access the same subroutine from different parts of the program. Also, you can put a GOSUB in a multiplestatement line, and the program returns to execute the rest of the line.

GOSUB Ways

Consider a couple of examples. This is a GOSUB in a multiple-statement line:

100 GOSUB 120: PRINT "Hey, don't forget me!"

110 END

120 PRINT "I'm pretty important around

here." 130 RETURN

140 END

The GOSUB sends the program from line 100 to line 120, where it executes the Print statement. The Return in line 130 sends the program back to line 100. where it moves on to the next event, the second Print statement.

Here's an example of how you can GO-SUB to an earlier line:

100 GOTO 130

110 PRINT "ANSWER: Cool Hand Luke."

120 RETURN

130 PRINT "QUESTION: Whom do the cows hate to see at 5 a.m.?'

140 GOSUB 110:END

In this listing, Line 100 does an important job by skipping past the early subroutine. Delete line 100, run the program, and you'll get a "Return without GOSUB in 120" error message. This error results when a program ploughs into a subroutine without being told to go there. For beginners, this event can be mystifying because it can happen in a listing that looks flawless, as in the next example:

> 100 FOR X = 1 TO 3 110 GOSUB 1000 120 NEXT X 1000 PRINT X: RETURN 1010 END

The listing above counts to 3 as requested. Then it prints a 4, which is a surprise, and the program crashes with a "Return without GOSUB in 1000" error message. The listing needs a line 130 to prevent the program from continuing. In this case, 130 END suffices because the requested work is complete.

Here's another possibility:

100 X = RND(100)110 N = N + 1120 IF X = 50 THEN L = L + 1:GOSUB 1000 130 GOTO 100 1000 PRINT L"50s in"N"trials." 1010 IF N = > 1000 THEN END ELSE RETURN

First, look at line 1000. Understand that you can use a template subroutine with different variables. This is important, for you'll write programs in which you'll want to stipulate certain values and immediately call a subroutine to test them in some way.

The listing above tests how many times the number 50 is the random result of the statement X = RND(100). Line 130 seems to loop back to line 100 endlessly. However, line 110 increments N by I each time. Line 120 increases L by 1 and GOSUBs to line 1000 if X equals 50. In the subroutine, line 1000 prints the in-progress result, and line 1010 ends the program if N equals 1000 or

You could write the program without a subroutine, putting the lf...Then tests and results of lines 120, 1000, and 1010 into line 120. But don't do it: You'll thicken the program where it should be leanest, at a focal point where it must make many tests quickly. The difference won't show in this example, but if the subroutine involved much more material, you'd increase program run time.

I have a related example to illustrate a different point. It's a pseudo-Basic program:

100 X = RND (ALL POSSIBILITIES)

110 IF X = "go to moon" THEN assemble crew, bulld space ship, condition crew. test ship, buy high octane fuel...

Assume line 110 involves more sequential results than will fit in one line. You could break up each event into lines beginning with the same lf...Then test. But it's cleaner and faster to invoke a subroutine whose straightforward events result from one simple If...Then

> 1000 Assemble crew 1010 Build space ship 1020 Et cetera 1030 RETURN

Yes, you can get around the initial awkwardness in other ways unless, of course, the program offers possibilities of moon trips in different program lines.

Losing Your Memory?

In an earlier column l included a variation of the following listing. I trot it out again because of its germane GOSUB:

> 100 GOSUB 120 110 GOTO 100 120 GOTO 100

When you run this program, you'll get an "Out of memory in 100" error message. It seems to happen instantly, but the program actually executes numerous GOSUBs. The listing is an example of a nonreturned GOSUB. Line 100 GO-SUBs to line 120, which GOTOs line 100. Oh, what a vicious cycle, and poor line

110 never runs!

The program crashes because every GOSUB that is current costs bytes of memory. If you mistakenly transfer control to another line with a GOTO or variation, rather than a Return, the computer debits your RAM account every time it runs the subroutine. A subroutine ended by a Return recredits the amount debited. If you get an "Out of Memory" error and can find no obvious reason, check errant GOTOs within subroutines. Remember that multiplenested GOSUBs charge interest until you return them.

I waited until now to make this warning so you'd see that you can call subroutines from within subroutines, but with each necessary Return the program flows back to the initial source, the point just after the first GOSUB. Nested subroutines resemble those wooden Russian dolls that sit within each other. If you don't put them all back correctly. something is going to rattle around inside. Program Listing 1 shows you how to do it.

You can use GOSUBs in another way. in the form ON X GOSUB. This lets a single keystroke determine to which of several subroutines the program branches, based on the value of a numeric variable. Program Listing 2 shows an example. The program goes to line 1000 if X = 1, line 2000 if X = 2, and line 3000 if X = 3.

What if the ON X GOSUB line contains so many possible line destinations that the line exceeds the maximum 249character length? Then put the subroutines in low line numbers, preceded by a GOTO line taking the action to the actual start of the program. The Figure shows a dummy example.

The ON X GOSUB event is good for directing choices made from a menu, as the example in Program Listing 3 provides.

You can also use a subroutine as a timer. This is usually an empty For...Next loop in which the program does nothing but suspend operation for a moment to, for instance, flash a message on the screen. FOR T = 1 to 500:NEXT is an example. You might use such a timer many times in a program. Accessing that timing loop with a GO-SUB is economical programming. You can even throw in something like 100 GOSUB 1000:GOSUB 1000:GOSUB 1000 to increase the timer.

There's more to GOSUB. There's always more to everything in Basic. I hope that with this foundation the permutational possibilities will occur to you when needed. GOSUB in peace.

PRINTER OWNERS

Letters are received here on a regular basis from customers saying how much they really enjoy receiving our lists.

It's probably safe to say that the price lists issued here are different from most of the others. Maybe it's the chatty folksy style of writing? Perhaps it's the low, almost unbelievable, prices on printer cartridges? Again, it could be dealing with a dealer that understands the hobby Computer user and really cares about what you think?

Send your name and address today for a rather fat envelope of printer and computer related offers.

MILLER MICROCOMPUTER SERVICES 61 Leke Shore Road, Natick, MA 01760 (617) 653-6136

Open the Windows A Little Wider

ast month, I showed you how to set up a window driver for the Model 4 and TRSDOS 6.2. This month, I'll tell you how to add to it with an interface that lets your programs, in whatever language, open and close windows, frame those windows with a border, and save screens in memory for later recall. In a sense, last month's program provided the potential for a windowing system; this month's develops that potential.

I had to make two crucial decisions when I designed this month's program. The first was about where the computer should store previous screens. If I stored them in high memory, the program and two acreens would use 5K of RAM, which many people would find unacceptable. I decided, therefore, to dedicate one of the Model 4's alternate memory banks to this storage area. To run the program as presented here, you must have a Model 4 or 4P with 128K RAM.

What if your Model 4 only has 64K? Adding the second 64K yourself is easy. Several companies sell the necessary chips and provide installation instructions; you merely push the chips into sockets inside your computer. If you'd rather not add memory, you'll have to modify the program to reside in 64K, but you'll have to give up a lot of high memory.

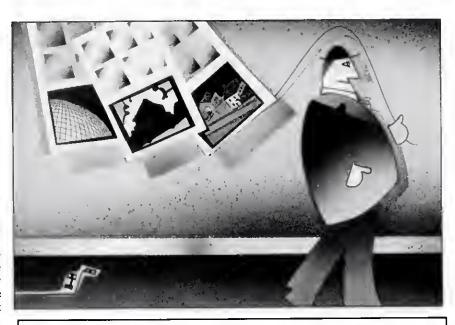

The second decision involved making the interface available to other programs. One program can find another by using the @GTMOD supervisory call (SVC) if every program in protected high and low memory has a standard TRSDOS header. That method works well, but it's a little clumsy.

My method involved writing a new SVC. This month's program (Program Listing 1) installs itself as SVC 127, one of

System Requirements

Models 4 and 4P 128K RAM TR8DOS 6.2 Diek Basic Assembly language Editor/assembler

Entry conditions:

A = 127(X'7F')

B selects function:

If B=0, close window that is open and return to previous window, restoring contents of screen as it was immediately before latest window was opened. Cursor position is restored.

If B = 1, open a new window on top of screen display.

H = row on screen of top left edge (0-22).

L = column on screen of top left edge (0-78).

D = row on screen of bottom right edge (1-23).

E = column on screen of bottom right edge (1-79).

if C <>D then window will be outlined with character in C.

If B = 2, query about present window.

Exit conditions:

If B = 0:

Success, Z flag set.

Failure, NZ flag set.

if A = 64 (X'40') then no lower window exists.

If B = 1:

Success, Z flag set.

Fallure, NZ flag set.

if A = 64 (X'40') then window storage room is full. Otherwise, A contains TRSDOS error code.

Will return an eror unless HL and DE are in bounds and H<D and L<E.

If B = 2:

Success always.

C = count of windows stored.

H,L = row & column of top left edge of current window.

 $D_{\nu}E = row \& column of bottom right corner of current window.$ Uses BC,DE,HL.

Figure. Window SVC definition.

THE NEXT STEP

the four SVCs that TRSDOS 6.2 reserves for programmers. Other programs can open and close windows by properly setting up the BC. DE. and HL registers and then calling the window interface just as they would call any other SVC.

I wrote my program with Radio Shack's ALDS editor/assembler, but I've included comments that explain what changes you must make for Pro-Create or EDAS.

The Figure is a complete definition of the @ WINDOW SVC. The SVC lets your programs determine the status of the current window, find out how many windows you stored in memory, open a new window, or restore a former window. The register definitions are similar to those of @VDCTL, so you should have little trouble using it.

The program is long—just over 1,000 bytes—but after you install it, it requires only 380 bytes of high memory plus one of the alternate banks. During installation, the program loads the portion of code responsible for saving and restoring screens into an alternate bank, which has enough room to store 15 screens. In other words, you can define up to 16 windows. As your program finishes with each, you can restore the previous screen in its entirety.

Sections to Note

Because the program is so long, I don't have room to describe all its functions in detail. However, a few sections deserve careful attention. The section called Framer (line 229) saves memory by continually altering the routine that puts a frame around a window (lines 262–270). Framer does not need to determine if the frame will fit on the screen. It makes calls to the @VDCTL SVC to position the frame characters around a window; if Framer tries to put a frame character off the edge of the screen. @VDCLT will refuse to display it.

The Save and Get sections the program stores in alternate memory address the screen directly. They must do so because @VDCTL always returns to bank zero, the memory bank that is usually present, before it starts operating. Therefore, any alternate bank routine that needs to communicate with the screen must do so on its own. This isn't an elegant way to program, but the only alternative is to use @VDCTL to transfer one screen character at a time, a process that is far too slow.

Using the alternate banks involves careful programming and some tricky debugging. The description of the @BANK SVC in the Model 4 Technical Reference Manual is fairly clear; the examples in this program should help you over any difficulties. Notice that the stack must be

The sections of code seem long, but most of the instructions compile into single-byte commands.

below 8000 hexadecimal before the computer switches ao alternate bank into memory. The SAVSTACK routine (lines 278–292) moves the stack into the system area if it's too high.

The sections of code moved to the alternate memory bank, Save and Get (lines 311-389), seem longer than they are. Most of the instructions compile into single-byte commands. I could condense the source code if I used the extended commands built into the ALDS assembler, but this would make the code more difficult to translate to other assemblers.

The Installation routine (from line 394 on) must make three checks before moving the program to high memory and the alternate memory bank. First, it makes sure that you've already installed last month's window driver because it needs the address of the driver's data area. Second, it must be sure that you're not already using SVC 127. And third, it has to find an alternate memory bank to use for the Save and Get routines. The routine first tries to use bank 2, but goes to bank 1 if you're using the second bank.

Once it makes the necessary tests, the routine moves the program to high memory and the alternate bank and reports a successful installation. If any of the tests fail, it reports the cause of the failure.

When you've written and installed this month's portion of the Model 4 window system, test it with the Basic program in Program Listing 2. This demonstration will give you a feel for the power of the windowing system. Next month, I'll add the last segment (a user interface) to the window system and make the windows more useful by taking care of a couple of inconsistencies in TRSDOS.

You can contact Hardin Brothers through CompuServe. Go PCS-117 to the Writers' and Editors' SIG (WESIG) and leave your message addressed to him. Feel free to join in discussions storted by others.

You can also write to Hardin at 280 N. Campus Ave., Upland, CA 91786. Enclose a stomped, self-addressed envelope if you want a reply.

If you invest in brick and mortar, then you should invest in our brickware, Investor III™. Designed by real estate professionals to work on the IBM PC or TRS-80, Investor III™ is a comprehensive software package that aids in investment analysis of property, whether commercial or residential, small or large. It shows both the tax and cash aspects of an investment opportunity and is flexible enough to allow you to vary a number of key assumptions (such as cash flow, phased investments, multiple mortgages, and tax parameters) and see the results in an instant. So if you are serious about brick and mortar, look at our brickware. It will help you lay a solld foundation for your investment strategy.

Communications Gap? LET'S TALK"!

LET'S TALK CLOSES THE COMMUNICATIONS GAP BETWEEN TODAY'S POPULAR PERSONAL COMPUTERS.

LET'S TALK is a complete package for fully supported communications between any of these computers. In any direction. Without additional expense.

LET'S TALK is a simple, straightforward program that transfers ASCII data files, including BASIC and VislCalc®, from one computer to

another. Precisely. Easily. Without professional, expensive data processing expertise.

LET'S TALK allows two computers to communicate directly with each other In a "conversational mode" when not actually transferring data. And, LET'S TALK can send or retrieve files of any size from unattended

computers, at three different speeds. GROWTH AND EXPANSION REQUIRE OPEN COMMUNICATION, LET'S TALK

50°TWARE CORP Making dollars and sense out of information.

Now available at Radio Shack stores through Express Order Software Program.

a division of the goodman group, Inc. 12900 Preston Rd., Dallas, Texas 75230 (214) 239-6085 LETS TALK includes all diskettes for each of the above computers. Suggested retail price \$179.00 + \$5.00 shipping

Let me take time this month to answer some of your most frequently asked FORTH questions is FORTH hard to learn?

Unlike most languages: FORTH hat to bleath:

Unlike most languages: FORTH doesn't make you spend a lot of time studying before you start doing You can start creating useful programs right away and, in just a short time, you'll be turning out sophisticated FORTH programs with the best of them!

How FAST is FORTH?

How FAST is FORTH:
Compared to interpreted BASIC, FORTH is blindingly
fast FORTH compares very favourably with irue
compilers too While an application written in pure
FORTH may not execute as quackly as a compiled
program. FORTH programs can easily be tuned in
Assembly language to yield code which out performs a
compiler.

Assembly language to yield code which out performs a compiler What applications is FORTH suited to? FORTH has been used to implement databases; games, scientific and educational applications; even knowledge-based expert systems when you program in FORTH, the programming world is your oyster!

How compatible is FORTH from SOTA?
FORTH from SOTA is totally competible with all the popular TRS-80 operating systems TRSDOS, LDOS, REVIOS, DOSP, LUS and for model 4 users, even CP/M Plus and Montesume Micro's CP/M What's more, you can run FORTH from SOTA in native mode, using its own operating systems.

can run runth from Sola in native mose, using its own operating system.

Does SOTA require licensing or royalties?

No, you are free to distribute the programs you develop without additional cost SOTA is in the business of programming lenguages, so as long as you aren't simply reselling FORTH, you can make as many copies of the FORTH diskette as you like and distribute them as you like and distribute them as you like and distribute them as

of the PURIA diskette as you have and some you please.

Why should I order FORTH from SOTA?

SOTA Computing Systems Limited in committed to providing you with unparalleled service and support We have a full time staff dedicated to answering your questions and helping you with your problems. When you deal with SOTA Computing Systems Limited, you're not just buying a piece of software, you're getting a whole support team dedicated to helping your programming effort.

How much does FORTH from SOTA cost?

\$75.00

What does my \$75 00 get me?
You'll receive the introductory programmer's manual, the comprehensive reference manual and fORTH diskette. The diskette contains the standard FORTH vocabulary, an editor and 280/FORTH assembler as well are over 50 extre functions, not included in the standard that you'll find particularly useful.

Oog't wait any longer! Order today and join the FORTH revolution now!

Terms of Endearment

by John B. Harrell III

Borrowing money is never pleasant, and trying to understand interest rates and payments makes a tough chore more difficult. One way to ease the process and get a clear idea of what you're getting into is to use a spread-sheet to manipulate the terms of the loan and observe various outcomes. While this won't make the borrowing any more pleasant, it might help you decide which terms are best.

My two-part spreadsheet template. Amortize (see Fig. 1), provides a complete breakdown of your loan (lines 1-17) and furnishes a year-by-year listing of the actual loan payment schedule (lines 20-53). I used Multiplan to design Amortize, but you can easily convert it for other spreadsheets.

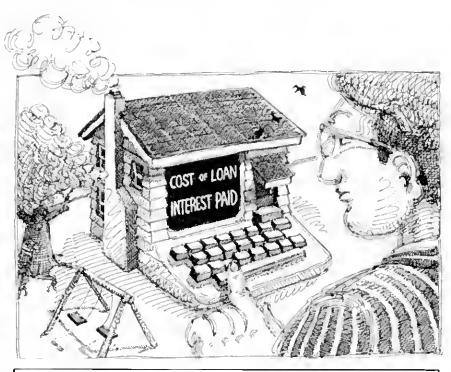

To use the template, enter the amount of your loan (called the principal or PV) in line 4, the length of payment in line 5, and the annual percentage rate (normally referred to as the APR) in line 6. These numbers are the basis for the remainder of the spreadsheet, so make sure they're valid. My template calculates the payment for the loan, the loan's total cost, the total interest paid, and the overall interest rate (rows 9, 11, 12, and 13 in column 5).

The second part of Amortize summarizes each year's performance as you pay the loan. Period totals give you the total paid in 12 months, the total interest, and the total principal (lines 34 and 53). The month and year labels depend on the entries in cells R16C6 (row 16, column 6) and R17C6.

Background

I derived the amortization data in this template by compounding the interest on a monthly basis. Among the other compounding methods available are straight interest, simple interest, or daily compounding. The lemplate results are accurate enough that you can use them to study most loan-repayment schedules.

I calculated the monthly interest rate (i) by dividing the APR by 12. Cell R6C5 displays this result as a fractional value. The formula in R9C5 calculates the

SPREADSHEET BEAT

monthly payment (PMT) with the following formula and then rounds it to the nearest cent:

$$PMT = \frac{(i^{\bullet}PV)}{(1-i^{-np})}$$

I used the rounding function to make the calculation as accurate and realistic as possible. Since the computer uses binary arithmetic, it often creates repeating decimals out of numbers that are exact fractions in decimal arithmetic.

Once it computes the loan payment, the template derives the total cost by multiplying the number of payments by the individual payment (R11C5).

Similarly, the interest is the total cost minus the principal of the loan (R12C5), and the overall interest percentage rate is the total interest divided by the original principal (R13C5).

Extending the Template

I've used Amortize to illustrate the payments on a two-year loan. You'll probably want to add years to the payment schedule to allow for a longer amortization period (no one can afford a two-year loan anymore), and you can easily reproduce the schedule of payments in part two of the template. The only limitation on extending the template is the computer's internal memory and how much your spreadsheet can pack into it.

Remember that the date information depends on the data in cells R16C6 and R17C6. The formulas in columns 1 and 2 of the second part are pretty straightforward. They check the cells preceding them to determine if the year has ended and increment the month and year accordingly.

The formula in column 3 carries forward the payment from the initially calculated values. For ease of replication, make the reference to this cell absolute. You can do this in Multiplan by pressing the @ key after you enter the appropriate cell reference (for example, this would turn the cell reference

R(-12)C(+2) into R9C5). With Lotus, use the ABS function key (F4).

My template calculates interest (column 4) by applying the monthly interest rate (i) to the balance of the loan. The difference between the payment and the interest required is the amount applied toward the principal (column 5). This principal amount reduces the balance of the loan for the next payment (column 6).

Figure 2 lists the formulas I used in my template; Fig. 3 shows the cell formats. I redefined the widths of columns 5 and 6 to accommodate 13 characters.

Write to John B. Harrell III ot 1519-A Corswell Circle, Bolling Air Force Base, Washington, DC 20366.

Submit your template (Include a disk version) to Spreadsheet Beat, c/o 80 Micro. 80 Pine St., Peterborough. NH 03458. We'll pay \$50 for each one we publish. We'll also publish any valuable hints and patches you'd like to shore.

Tidbit #25

Supposedly, the maximum length of a Model I/III Basic program line is 255 characters. In truth, a line can be as long as you want: it can have thousands of characters. This 12-line utility lets you create super-long lines, useful for hiding code or for tightening up a program.

Long lines run fine, but you can't iype them in, you can't edit them, you can't display the entire line, and some utilities mishandle them. As always in Basic, you can reference only the beginning of the line.

However, some of these supposed disadvantages are exactly why you'd want to create a long line. In a 355-character line, the last 100 characters could contain secret information: Basic displays only the first 255. You can print the buried code, though.

Tired of having people mess with your Basic code? Anyone who tries to edit a long line will lose all characters after the 255th on leaving the edit mode: a little booby-trap.

You can use the program any time you want to combine two lines, not just to create auper-long lines. It works under Cassette or Disk Basic. After you've typed in the utility and saved it to disk or tape, type in RUN 100. When the program prompts for a target, type in an existing program line number. The utility finds the target and combines it with the next program line, butting the start of the second line to the end of the

target. If the target is a program's last line, the routine doesn't work.

You'll find that the utility inserts four blank spaces between the two lines. As long as the new line has fewer than 255 characters, you can delete the spaces using Basic's edit mode; otherwise, try a space-removing utility.

Continued from p. 34

The Good Word by R. Walter Steur

The Word Machine 3.0 runs on the Models I and III (48K) and requires one disk drive. Pel-Tek, P.O. Box 1026, Southampton, PA 18966, 800-523-2445. \$35; \$99 with Spell Check/Correct and DBLCOM.

Easy to use: ★★★☆
Good does: ★★★☆
Bug free: ★★★☆
Does the job: ★★★☆

Ithough the latest Tandy computers get all the headlines these days, the venerable Models I and III are still worthwhile machines, and you'll find plenty of inexpensive programs available for them. The Word Machine 3.0 is an impressive word processor that lets you embed text in a document from a disk file. print out documents too long for RAM by chaining them together, include headers and footers in text, preview text before printout, and specify the format for page numbering. In addition, you can use The Word Machine in conjunction with Pel-Tek's other programs, the Spell Check/ Correct spelling checker and the DBLCOM telecommunications program.

Improvements

The Word Machine 3.0 is a line-oriented text editor that includes the usual word processor features such as cursor movement, appending text, insert/delete, and entering ASCII and block graphics characters. Pel-Tek has made a number of significant improvements to The Word Machine since its earlier version (2.0). First, the program comes with Micro Systems Software's TDOS operating system that provides a lowercase driver in low memory for the Model 1. If you use another DOS, you must provide a lowercase driver.

You can now execute the Load and Save commands Iollowed by a file name to avoid being prompted for one. More important, you can save files with or without text formatting data or a file extension. The Word Machine loads any ASCII file, with or without a IDOC extension, and it recognizes whether you've included format data. As in version 2.0, you can insert a disk file from a buffer in between the current and the following line.

A new improvement is the Get command that calls a disk file you want to embed in or append to the current text file while printing. This feature lets you add boilerplate paragraphs and stock headings and endings to documents. You can prepare long documents in sections so

they'll fit in RAM, then join them with the Get command to print them out.

Pel-Tek has expanded The Word Machine's document formatting section considerably. You can specify header and footer lines that become part of the format data saved with the text file, you can diciate page number placement or alternate the placement for odd and even pages, and you can print unformatted copies of your files. The Preview command lets you see your text formatted on-screen before you print it out.

You can specify how many copies of the current file you want printed and set the page on which you want numbering to start. You can embed certain printing commands such as page eject, line skip, and printer control codes. Separate options control whether or not the embedded commands are executed and/or printed. Also, you can now print from the top of a file to the end, or print from the current text line to the end of the file.

The Options

The Spell Check/Correct program works with The Word Machine (or with any other word processor) to automatically correct misspellings and saves the changes to the original file. The program provides a count of a file's total words and unique words.

The Word Machine's dictionary contains 31,000 words that you can augment either manually or automatically. It displays unfamiliar words in context and presents a menu of options so you can type in the correct speiling, pass over the word once, pass over it for the rest of the session, or pass over it and automatically enter it into your auxiliary dictionary file. Speil Check returns control to The Word Machine afterward. This is a quick and effective spelling checker.

The DBLCOM communications program interfaces with The Word Machine and supports many useful features: print spooling of incoming data shown on the screen, disk directory from within the program, resettable UART parameters, full/half duplex, a line feed filter, auto-dialing, and dialing from the keyboard or from a previously prepared phone list file. The split-screen option is particularly useful for conference calls and for CompuServe's CB feature. DBLCOM transmits all 26 telecommunications control codes.

One feature DBLCOM lacks is the ability to transmit/receive disk files with error-checking. Pel-Tek provides a utility to convert binary files to hexadecimal and vice versa for up- and downloading, but you're still limited by memory and the lack of error-checking.

The documentation accompanying these programs is satisfactory. It presents all the necessary information in a clear and readable style.

Rapidos: No Waiting by Gary A. Ludwick

Rapidos runs on the Models 1 and Ill with 48K and on the 4 with 64K; it requires one disk drive. Rapidynamic Software Inc., 14358 Dyer St., Sylmar, CA 91342, \$30.

Easy to use: ****
Good does: ****
Bug free: ***
Does the job: ***

a a recent convert from a Model Ill to a Model 4P. I couldn't believe how slowly TRSDOS 6.2 formatted and backed up disks. While a combination format and back-up operation takes three or four minutes on a Model III, it takes nearly six minutes with TRSDOS 6.2. And that doesn'i include the time required to invoke TRSDOS 6.2's separate Format and Back-up commands.

Rapidos is a high-speed disk formatting and duplicating utility. As you can see from the Figure. Rapidos makes a significant difference in the time it takes to back up a disk, particularly on the Model 4. TRSDOS 6.2 takes six minutes and 18 seconds to format and back up a disk, plus the time it takes to invoke the two commands. With Rapidos, it only takes one command and 43 seconds.

But Rapidos does have problems reading disks formatted in different drives (for example, trying to read a disk in drive 1 that was backed up in drive zero). This happens when your drives run at different speeds.

Rapidos is also a miniature operating system that includes a small library of commands you can use from Rapidos Ready (see below).

Choosing from the Menu

Since the Rapidos program and operating system are memory-resident, you can remove the program disk from your drive after boot-up. The main menu offers the following choices: Format, Back-up, Format and Back-up, Display Speed, Change Parameters, and Exit to Rapidos.

Use Format to prepare data disks. You can mass-format without ever returning to the menu—just keep replacing disks in your drive and hitting the F key.

Back-up is for use with already formatted disks. Again, you can make mass back-ups with just one keystroke.

Format and Backup do both tasks in one operation.

Display Speed is a drive timing program. As long as your drive doesn't go above 302 rpm, the manual says that everything should work fine. Appar-

ently, slower speeds don't cause any problems.

Change Parameters lets you specify the number of tracks on a disk (up to 80), the disk name and password, and the date.

How Rapidos Works

Rapidos reads and writes a disk track in a single revolution of the drive. To do this, it formats your disks differently from TRSDOS, but not so differently that it affects performance.

Rapidos verifies every read/write operation. If something isn't right, it lets you know and then retries the operation. I used Rapidos to format several flaky disks in my collection where TRSDOS 6.2 had locked out sectors as bad.

For Rapidos to work correctly, your disk drives have to be in good shape, particularly in terms of rotational speed. According to the manual, any deviation in speed above 7.5 percent itwo revolutions per minutel is likely to cause problems.

From my experience. Rapidos seems much more sensitive than that. The built-in disk drive program says there's only about I rpm difference between my two drives. Yet, I can't read a disk formatted and backed-up on drive I on drive zero.

Rapidos's Little DOS

Rapidos's proprietary operating system commands include Directory, Kill, Step (to changing the stepping rate of your drives). Load, Do, and Auto. You can use all the commands without the system disk in place.

With the Rapidos disk in drive zero, you have access to the Help, Format, Backup, Copy, Free, Dirl (same as Directory, but with file lengths included), Rename, List, and Build commands.

Conclusion

Rapidos does work fast. Its rapid formatting and back-up capabilities are needed and the price is quite reasonable. But the problems with drive speed differences are aggravating. Rapidos' disadvantages can cause some real problems.

Model III	TRSDOS 6.2	Rapidos
Format only	1:14	0:15
Backup	2:43	0:27
Backup and format	3:57	0:42
Model 4	TRSDOS 6.2	Rapidos
Format only	0:36	0:15
Backup only	5:42	0:28
Backup and format	N/A	0:43

Flight Simulator

 $\star\star\star\star\star$

Flight Simulator runs on the Tandy 1000 and 1200 and requires 128K and one disk drive. Microsoft Corp., 10700 Northrup Way, Box 97200, Believue, WA 98009, \$49.95.

Microsoft'a Flight Simulator has been out for several years, and it's still tops. It's the only personal computer flight simulator that feels like the real thing. It has endless possibilities; you can fly to any of 80 airports in North America or pit your armed Cesana 182 against World War I biplanes.

Flight Simulator comes with 10 preset situations including a demo flight. the WWI combat mode, and a range of flight conditions from easy to emergency. You can also create up to 20 additional modes with the program editor and save them to disk.

You can set a multitude of environmental parameters: Circle over Boston's Logan Airport on a summer night. Land at O'Hare in Chicago in fog with FAA-approved IFR (instrument flight rules) instrumentation. Or, if you want a real thrill, put yourself in a spin at 10,000 feet in a zone of turbulent winds with unreliable instruments.

Flight Simulator's editor lets you manually set your location and altitude, the speed and attitude of your single-engine Cessna, and up to two layers of clouds and three levels of wind shear and turbulence above the ground wind. You also control the season, time of day, the reltability of your craft, and the simulator sound (on/off). You have radio communication with the local airport, viewa out all the windows, and a radar function to zoom in on your position on a map.

There are limits to Flight Simulator's realism. Once I landed on New York Harbor and taxied around the Statuc of Liberty. And you'll encounter a few Bermuda Triangles. But the program is so good that it's fun to find the occasional bug.

Flight Simulator's manual is a match for the program. It's attractive and well written with maps, fold-out keyboard charts (for the IBM PC and PCjr), a glossary of aviation terms, technical specs on your plane, and, of course, flight instruction.

Since Flight Simulator doesn't use DOS at all, there are some keyboard differences between the Tandy 1000 and the IBM PC, but they are relatively minor. You can use the keyboard layout for either the IBM PC or the PCjr. I haven't tried using Flight Simulator with joysticks (should be better), but I suspect there'd be compatibility problems on the 1000.

-Dave Rowell

Omniterm2

Omniterm2 runs on the Tandy 1000, 1200, and 2000 and requires 128K. Lindbergh Systems Inc., Worcester, MA 01609. Express Order Software number 90-0270 (Model 1000.1200); 90-0180 (Model 2000). \$175.

Omniterm2 is a telecommunications package for the Tandy 1000, 1200, or 2000. It offers automatic dialing and logon, macro keys, buffer controls for sending and receiving files, and options for screen color selections and prompting with sound. You can call file directories, delete files, review and search files, change your default drives, and change the directory path.

In addition to ASCII file transfer. Omniterm2 supports Christensen protocol (XMODEM) that lets you send and receive files from a remote computer in compressed Basic or binary (/CMD) format. Christensen protocol also provides superior error-checking to eliminate the chance of receiving erroneous code during a downlosd.

You can use Omniterm2 for unattended host operations, too. Using a modem, you can call your home or office computer running Omniterm2 and upload or download files from a remote location, or use the chat option similar to those in many electronic bulletin board programs.

You can get a help file at all times by pressing the F2 key, and the F1 key returns you to the terminal mode. Other function keys send and receive files, toggle the printer, redial a phone number, and more.

Omniterm2 supports different types of terminals, including the standard TTY (teletype) and Digital VT100 and VT52. You can also set your own terminal parameters.

The manual is well organized and the information moves the user quickly from booting up the program through explanations of the terminal mode to the options available through the program's main menu. The psekage includes extensive appendixes that outline the program's more technical aspects as well as a glossary of telecommunications terminology and an index.

-Bradford N. Dixon

PowerScript

PowerScript runs on the Models I. III. and 4/4P and requires Scripsit. Powersoft, 17060 Dallas Parkway, Suite 114. Dallas. TX 75248. \$39.95.

PowerScript adds a number of new features to Radio Shack's standard

You can invoke your printer's typeface features using embedded control codes or embedded control lines, and you can assign each control code (such as underlining, bold face, and expanded and contracted printing) to a key. You can even print graphics characters for headers.

You can also define printer control characters, redefine keyboard key characters, define new printer characters, send carriage returns with or without line feeds, select either the ROM or the PowerScript printer driver, and select the exact DOS patch needed for your system.

PowerScript works with all versions of Scripsit (Models I. III. and 4/4P), and operates under all the popular DOSes (TRSDOS 1.3, 2.3, 6.X; LDOS, DOSPLUS 3.4, and NEWDOS/80 2.X). The only disadvantage is that it reduces Scripsit's buffer size by about 2K.

PowerScript would be useful to Scripsii users who find its shortcomings annoying, but don't want to abandon it for another word processor.

-Terry Kepner

TK!Solver

 $\star\star\star\star$

TKISolver runs on the Model 4 (128K) under TRSDOS 6.X and requires two disk drives. Tandy/Radio Shack, One Tandy Center, Fort Worth, TX 76102, Radio Shack catalog number 26-1630, \$299.95.

TK!Solver is designed to solve equations in analysis, design, and planning. While it's a powerful program, it runs slowiy, with noticeable and annoying pauses between every command.

TK!Solver solves both simple and complex equations. For example, consider the equation A = B + C. You type in the equation, assign values to any two variables, and TK!Solver calculates the value of the third variable. It can also solve multiple simultaneous equations while changing units, develop tables of values such as monthly mortgage payments and loan amortization rates, draw simple graphs, work with both formulas and user-defined functions, and develop a series of solutions based on a list of variable values.

If it doesn't have enough information to derive a single, definitive solution to a series of equations, TK!Solver uses an iterative technique to find the closest solutions to your best guess.

TK!Solver is unlike any other program I've seen. Though some of its functions are similar to those of a spreadsheet, it operates differently. The program is divided into a number of "sheets" that act like scraps of paper. You can display any sheet or pair of sheets on the screen at one time. Use the sheets to hold formulas, variables, unit conversions, tables of values, and system parameters.

You enter information in the sheets for the problem you're working on, and move from one to another as needed. When you've entered all the information, you merely type an exclamation mark and TK!Solver works out a solution.

Using TK!Solver involves a lot of commands. The manual is several hundred pages long and it's generally clear. Half of it is a tutorial that takes you through most of TK!Solver's functions. The other half is a reference section that explains each function in detail. Included with the documentation is a reference card and a large wall chart that shows how the various parts of the program interact.

FOR TANDY
II/12/16/6000
(TRSDOS™, XENIX®,
or CP/M®)

How much would you lose if a power failure, hardware glich, or other disaster damaged or destroyed your hard disk data files? How long would it take to reconstruct them? How would the loss affect your business?

snapback can't prevent a disaster. But it can back up your hard disk so quickly and inexpensively that you can always be prepared for the worst. This is possible because SNAPBACK is . . .

- FAST. It copies 1.5 (Mod. II) to 2.4 (Mod. 12/16/6000) Mbytes of data per minute to 8" floppy disks. Thus, you can back up a 15 Mbyte drive in as little as 7-8 minutes.
- FLEXIBLE. It works with any Model II/12/16/6000, any B.7/12/15/35 Mbyte Tandy drive, and any XENIX, TRSDOS, and/or CP/M data.
- EASY. Its menus make it a snap to back up or restore your data (with optional verification).
- INEXPENSIVE. It only costs \$125,00.

If you value your data, you need SNAPBACK. It's the best insurance available.

The SNAPBACK package includes two bootable disks and complete documentation. To order, phone or write today.

(Mastercard, VISA, Check, or UPS COD (\$2) accepted. Add \$7.50 for handling/shipping. CA residents add 6% sales tax.)

We have out together special bundles of software just in time to save you a bundle of money. Didn't you ever wonder why CP/M was so popular? The reason is the software availability. All programs (except EP) are for the Model 4/4P and have been optimized to install and run without hassle. For example, we have memory-mapped WordStar® and it runs circles around the standard version available elsewhere. We also added printer drivers for the Daisywheel II and the DMP-2100. Our CP/M® 2.2 is the best around. Read the reviews. You know the programs. You know the prices. This is the years' best value. You owe it to yourself to let these CP/M® programs and thousands of others (many in the public domain) start serving your needs.

30 Day Money-Back Gnarantee: Before you spend thousands of dollars on an accounting system, try dac-easy accounting, and if you are not fully satisfied, return it. For \$49.95 you owe it to yourself to find out that software doesn't have to be expensive to be the best.

Fair Catch

Paper Catcher (\$49.95) stacks printed pages, checks, labels, and any continuous forms neatly on top of your printer. It fits on top of most 80-and 132-column printers.

Contact Buddy Products, 1350 S. Leavitt St., Chicago, IL 60608, 312-733-6400 for more information.

Circle 569 on Reader Service card.

Makin' Macros

SuperKey (\$69.95), a RAMresident keyboard enhancement program for MS-DOS computers, features macro processing and automatic data encryption.

The program offers context-sensitive help, and its cut-and-paste feature stores data under single-key control for use in other applications. It also switches the monitor off if the computer sits idle for a long period.

SuperKey encodes binary files in ASCII format and uses direct overwrite protection for non-encrypted files. For more information, contact Borland International, 4113 Scotta Valley Drive, Scotts Valley, CA 95066, 408-746-0911.

Circle 551 on Reader Service card.

Write On

The Portable Computer Support Group makes your Model 100 a complete word processor with Write ROM, a machine-coded snap-in ROM Text enhancement.

Write ROM saves the RAM space you'd usually need to store Text files. It also offers a library function so you can call boilerplates for form letters, and it generates interactive forms, where input screens prompt you to enter appropriate information. PCSG has

Paper Catcher folds your printed pages neatly on top of your printer.

added pixel mapping (shows you a graphics screen display of how your printout will look on paper), search and replace, mail merge (allows you to send a personalized document to every name on your mailing list), and tab features.

Write ROM's commands are compatible with Wordstar's dot commands. It works with any serial or parallel printer and pressing a function key lets you track RAMfilesize and check the number of words in a document.

The price is \$149.95. For more information contact Portable Computer Support Groupinc., 11035 Harry Hines Blvd. #207, Dallas, TX 75229, 214-351-0564.

Circle 558 on Reader Service card.

Sunny Side Up

Longview (\$29.95) prints your VisiCalc spreadsheet down the page instead of across, giving you the effect of a 400-character or wider printer. It does so by "rotating" your spreadsheet before printing it out.

Longview is an add-on to

Prosoft's DotWriter text formatter. It runs on the Models I, III, and 4/4P and requires two disk drives and 48K. For more details, contact Prosoft, Box 560, N. Hollywood, CA 91603, 818-764-4555.

Circle 559 on Reader Service card.

Express Mail

Ultimate Mail is a mailing list program for the Models I, III, and 4 with a fast machine-language search and sort. When in the search, sori, edit, or print mode Ultimate Mail takes about a second to find any record regardless of the file size. You can search and sort by any field.

Ultimate Mail lets you define what label lines you want to print and in what order. You can also predefine 15 different print formate and then specify which format number to print.

A manual is included in the \$49 price; you can buy it separately for \$20.

For further information, contact Ultimate Software, P.O. Box 1291, Hayden Lake, ID 83835, 208-772-7634.

Circle 562 on Reader Service card.

Miracle Worker

Miracle (\$299) is an integrated software package for MS-DOS computers that handles data obtained from telecommunications. The package includes a spreadsheet, graphics, and a word processor.

You can download information to create sophisticated reports incorporating graphs, text, and spreadsheet data. Miracle learns commonly used command sequences for execution in one keystroke.

By using the Procedural Activities Language, you can, for example, automatically flag information in a data base, extract the information, and retrieve it in a format compatible with Miracle's spreadsheet. The program generates two- and three-dimensional graphs.

For more information, contact Micro Systems Software Inc., 4301-18 Oak Circle, Boca Raton, FL 33431, 305-391-5077.

Ctrcle 553 on Reader Service card.

Number Play

Targets is a Model III/4 game that challenges students to play with, develop, and expand their knowledge of numbers. It teaches basic math operations and finding the most efficient adjution to a problem.

You solve sample problems by reaching a target value in the fewest steps possible. Students may choose from three levels of play.

For \$55 you get one disk, a back-up disk, and a teacher's guide. Contact Sunburst Communications Inc. (39 Washington Ave., Pleasantville, NY 10570, 800-431-1934, 914-769-5030) for more information.

Print samples from download font disk #2 for the DMP-2100P.

Fonts and Fonts

Prosoft provides high-resolution, downloadable fonts for your DMP-2100P or Epson LQ1500 on the Models I. III. and 4/4P or with MS-DOS. Font selections include italics, cursive, headline, and others.

Each of Prosoft's four disks includes programs to transfer the fonts, at least 11 fonts, and sample files to demonstrate them for you. You can preload a font into the printer and then use it with any other software. including Basic.

Each disk costs \$59.95. Free print samples and further information are available from Prosoft, Box 560, N. Hollywood, CA 91803. 818-764-3131.

Circle 571 on Reader Service card.

Zap Trap

The Static Buster static potential equalizer (\$49.95) is a two-ounce grounding unit that drains dangerous static buildup from your computer.

The unit attaches to your

computer's screen and keyboard or to a peripheral. You connect a ground wire to an electrical outlet, water pipe, or other grounding source. In addition to preventing data loss, the system helps prevent eye strain from dust build-up on the display.

Contact Advanced Marketing Concepts (19301 Ventura Blvd., Tarzana, CA 91356, 818-342-8877) for more details.

Typing Teacher

Type Right (\$39.95) teaches correct typing on a Model III or 4. It consists of eight programs. The first three teach you the location of individual keys (upper- and lowercase letters, numerals, and special symbols) in a game format.

Two other programs teach you how to type common English words and Basic key words. Some of the other programs provide exercises in data entry simulation, writing Basic programs, and maintaining a telephone list.

Type Right comes on a disk with student worksheets and teacher and student instructions. For more information, contact E. David & Associates, Small Computer Systems, 22 Russett Lane, Storrs, CT 06268, 203-429-1785.

Circle 556 on Reader Service card.

Horsing Around

Make some big bucks with this horse racing handicapping package for the Models III and 4 and IBM PC compatibles. It includes a thoroughbred racing analysis, a harness racing analysis, and a bet return analysis program. The computer analyzes and rates each horse from data you input.

According to Software Exchange, the handicapping systems have correctly selected first-, second-, and third-place winners over 65 percent of the time.

The package costs \$29.95. For more information, contact Software Exchange, 2681 Peterboro Road, P.O. Box 5382, W. Bloomfield, Mi 48033, 313-626-7208,

Circle 560 on Reader Service card.

Mail Box

Anchor Automation Inc.'s Signalman Computer Mailbox, a modem message center, enhances electronic mail by providing down-dialing capabilities to any computer system and receives and stores incoming messages whether or not your computer's on-line. It provides remote access and message pickup with multi-level password protection.

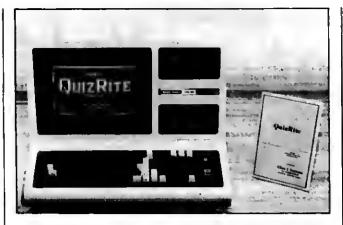

The Mailbox costs \$299. For additional information, contact Anchor Automation Inc., 6913 Valjean Ave., Van Nuys, CA 91406, 818-997-7758.

Ctrcle 570 on Reader Service card.

Bugbusters Basic

Debugging Basic Programs, written by David R. Cecil, is for the Basic programmer who wants to resolve typographic, syntax, assignment, and other Basic program errors. It also gives advice in trapping errors in logic, arithmetic, strings, and input/output.

NEW PRODUCTS

Write your own tests with QuizRite from Class 1 Systems.

The book includes myriad examples and costs \$9.95 from Tab Books Inc., Blue Ridge Summit, PA 17214, 717-794-2191.

Circle 567 on Reader Service card.

Quiz Time

Class 1 Systems' QuizRite test management program (\$89.00) for the Model III/4/4P lets you generate tests with four types of questions (multiple-choice, true/false, matchlng, and completion) from a single data file.

QuizRite data files are upward compatible with Class 1's TestRite. It allows teachers to store and edit tests.

The tests may be printed as write-on forms or specially formatted to utilize a separate machine graded answer card. Each generation of a test produces an answer key.

QuizRite requires 64K, one disk drive, and a printer. It is also available for the Models 1000 and 2000, Formore information, contact Class 1 Systems, 17909 Maple St., Lansing, IL 60438, 312-474-4664,

Circle 568 on Reader Service card.

Get Rich Quick

The Computer Gold Rush (\$12.95), from Pageaut Publishing Co. (P.O. Box 240334, Memphis, TN 38124, 901-386-2874) is for computer owners who want to make some money at home. It outlines the many kinds of full- and parttime businesses you can operate from home by computer and includes a listing of more than 500 places to advertise free.

The guide also features a special section (updated weekly) listing companies that offer computer-related jobs throughout the U.S.

Fast Driver

CorDos 2.X, a network operating system from Computorizm Developers Inc. (P.O. Box 182, 416 N. Washington St., Clinton, KY 42031, 502-653-4212) allows both Xenix and TRSDOS 2.X operating systems to run with either Corvus or Sunol hard drives on a Model II/12/16.

CorDos 2.X allows two or more multiuser (Xenix) and/or single-user (TRSDOS) computers to share data, printers, and other peripherals. The operating system also makes possible high-speed videotape and/or streaming tape back-up of data stored on the hard drives.

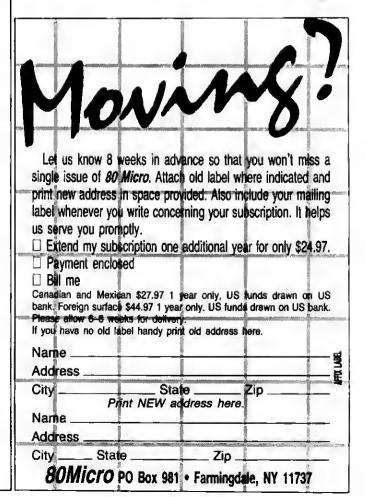

Corvus/Sunol drives run Xenix three to five times faster than Tandy hard drives. Hard drive partitioning enables all Corvus-/Sunol-compatible computers to operate simultaneously.

An installation disk, a boot disk and a manual are available for \$500 from Computorizm Developers Inc. (The boot ROM is available for \$50.)

Graphics Solutions

High-Resolution Software and Hardware

GBASIC 3.0 Radio Shack Model 4/4P/lll hi-res board owners take note of an enhanced graphics Basic, GBASIC 3.0 not only has an equivalent for each of the BASICG commands but adds a number of important new commands while using less memory. The hi-res screen can be printed on any of 20 popular printers or saved to or loaded from disk without leaving Basic. The software works with TRSDOS 13, 612, 62, LDOS, NEWDOS80, and DOSPLUS. The disk contains 40 graphics programs/files. Also included is a detailed manual which includes assembly language entry addresses \$49.95 (Specify Model 4 or Ill mode or add \$10 for both)

The following nine programs run on a Model 4/4P/III equipped with a Radio Shack graphics board and GBASIC 3.0 or a Micro Labs Grafyx Solution board:

DRAW - A powerful full screen graphics drawing and editing program \$39.95

BIZGRAPH Create business graphs from hand-entered or VisiCalc data. \$98.00.

xT.CAD Professional drafting aid which outputs to a printer or plotter \$449.95.

CHESS A very powerful program with 10 skill levels, 40 play options \$49.95.

REVERSI - Play Othello with 10 skill levels, 20 execution options. \$39.95

3D Tic-Tac-Toe \cdot Play the computer or a friend on a $4 + 4 \times 4$ matrix \$29.95

3D-PLOT · View three-dimensional data from any perspective or angle. \$39.95

MATHPLOT: Plot equations of the form Y: F(x) with auto scaling \$39.95.

SURFACE PLOT Plot three-dimensional equations of the form Z = F(x,y). \$39.95.

GRAFYX SOLUTION. Plug-in, clip-on board enhances any Model 4/4P/III to provide 640 < 240 / 512 > 192 dot graphics. Comes with over 40 programs and files including GBASIC 3.0 which adds over 20 new commands. \$199.95

JOY-MOUSE. Allows a Radio Shack CoCo joystick, mouse, or touch pad to be connected to any Model 4/4P/III Hardware provides X, Y position values from 0 to 255. A built-in speaker produces sound from the cassette port. \$129.95.

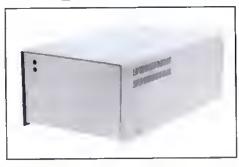

G.I.N.A. Software program for the Model 4/4P/III/I which uses the standard block graphics screen to display a window to a larger 65536 × 65536 dot tablet. The arrow keys are used to draw two or three-dimensional figures. The display can be scaled, shifted, or rotated in any dimension. The final picture is printed in hi-res on Radio Shack, Epson, Gemini, NEC 8023, or Prowriter printers \$75.00.

Please specify your exact system configuration when ordering or requesting information. Payment may be by check, Visa, Mastercard, or COD Domestic shipping is free on pre-paid orders. Texas residents add 51.% sales tax.

DeskMate Moves To the 4

Send your questions dealing specifically with Tandy products, services, or policies to Ask Tandy, 80 Micro, 80 Pine St., Peterborough, NH 03458. A representative at Tandy's Fort Worth, TX, headquarters supplies all answers published here.

• Will Tandy offer a version of • DeskMate for the Model 4/4P? I find a lot of useful features in the package.

Yes. The program's still being debugged, and you probably know how software debugging goes, so I don't want to speculate on just when it'll be available. But there will be a 4/4P version of DeskMate.

•In April's column, (p. 128), a reducer asked why Radio Shack refuses to support user's groups. Your reply was inadequate. I'd like to know why you don't even acknowledge them. Our group asked permission to post a small notice in several Computer Centers, and we were refused.

Our Computer Centers have instructions not to distribute third-party advertising material. Some employees might misread that to include information about user's groups. In fact, Tandy encourages user's groups, and doesn't object if stores post meeting announcements or other noncommercial user's group notices. Have Computer Center people contact Rich Hollander, manager of Tandy's Business Products Division in Fort Worth, if they want verification.

• ls it possible to buy the old Model • 4 keyboard without clustered arrow keys? How much? Part number?

Yes. \$81.81. Part #AXX-0216. You can still buy almost any part for any computer we've sold in the past seven years. Order through your local Radio Shack store for installation, or from Radio Shack National Paris direct (817-870-5662).

• I hope someone can answer what • I thought were simple questions; so far, I've had no luck. I want to know the amount of free (user) memory available in a Tandy 1000 with each of these programs loaded: Lotus 1-2-3, Word-Star, VisiCalc, Multiplan, EasyWriter, and DeskMate.

Unfortunately. I don't have all that software available to test. I will tell you that you should have about 40-45K less RAM available in a Tandy 1000 than in a comparably equipped IBM PC, since some of the PC's Basic is in ROM. A 256K Tandy 1000 should run all the software you listed. With DeskMate, you should have about 25,600 free bytes, depending on the version. The version of Basic I tried shows 60,875 free bytes. (Microsoft Basic, whether on the Tandy 1000 or IBM PC, can't address more than 64K of RAM.)

• TRSDOS 2.8DD (double density for the Model I) still has some bugs. Is it possible you'll release a new version?

▲ So few people would want the product that a new release is totally impractical. Chances are slim to none.

With increasing use of spreadsheets, it's more important to be able to print the output on one continuous sheet of paper. A program for the IBM PC, called Sideways, supports printouts of unlimited width. Does Radio Shack offer, or plan to offer, a similar program?

You didn't say what model computer you have. If you have a
1000 or 1200, the IBM program should
work. On a 2000, it might work. We are
looking at other similar products, but
I'm really not able to say much about
unannounced products. No dates or
specifics yet.

•1 own a Model III, and I'm a teacher. Why hasn't Tandy done as much educational programming as Apple? When I talk with other teachers about computers, they always throw cold water on the TRS-80 line because it lacks educational software.

A Tandy and Apple both encourage educational software development by outside publishers. We

currently have working agreements with 79 nationally recognized educational publishers. Those folks have more than 400 programs for TRS-80s. In fact, we just compiled a list of more than 300 Network 3-compatible programs, just for the Model III/4. Radio Shack publishes an Educational Software Sourcebook listing about 1.500 titles, and the TESS Software Sourcebook also lists about 1,500 programs. so I think that's a safe minimum number to quote. Armed with this information, maybe you won't have to take quite as much flak about "no" software.

• Does Tandy plan to manufacture • another computer in the I/III/4 family?

A Sorry, it's company policy not to speculate about future products. I can tell you, though, that we have NO plans to eliminate the Model 4 family.

• I love my Tandy 2000, but I'm disappointed with Tandy's software support. I got a notice about the MS-DOS 2.11.01 upgrade on Dec. 10, 1984. As of February, my Radio Shack store couldn't, wouldn't, or didn't care about getting me a copy. They're back-ordered, out of stock, or just not able. Why not mail me a disk instead of a letter?

Infortunately, we do sometimes have these problems. In this case, some stores might have been at fault, but part of the problem was that our product manager didn't anticipate the number of folks who'd want 2.11.01. We're often asked for many more upgrades than the number of products out there to be upgraded.

The good news is that, since mid-February. Tandy's filling orders for MS-DOS 2.11.01 with version 2.11.02. You should have received a letter announcing the upgrade by the time you read this. See, we do try to have a product available before we advise you.

Mailing disks isn't practical. They often don't work on arrival, too many people move, and too many never send in their registration cards. We generally have better luck mailing letters and having stores contact their local customers.

THE PALANTIR OFFICE SERIES

NO-NONSENSE SOFTWARE FOR NO-NONSENSE HARDWARE, AT A NO-NONSENSE PRICE NO BULL!

The Palantir Office Series ...

valuable, no-nonsense software tools that function compatibly across the entire Tandy line.

THE Word Processor is designed for microcomputers but gives you the feel and features of a dedicated word processor. It includes MailOut, the most powerful file merge feature on the market today.

THE Speller is a fast and easy spelling ckecker supplied with a 60,000 word dictionary. THE Speller's

ability to "guess" the spelling of a suspect word is uncanny.

THE Filer is an amazingly clever data management program that is the perfect companion to THE Word Processor for storing and retrieving any kind of information you need.

THE Indexer is like having your own personal librarian in your computer. It scans your disks and instantly displays all occurrences of a name, a phrase, or anything else you need to find without having to wade through directories or print-outs.

The Palantir Office Series does what it's supposed to do and does it well.

Ask your Tandy dealer to show you the Palantir advanced demonstration.

The no-nonsense Office Series is

available through Express Order Software at your Tandy dealer.

NO BULLI

VersaPayables*

VERSAPAYABLES" is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSAPAYABLES" munitains a complete record on each vendor, prints checks, cheak registers, vouchers, Itansaction reports, aged payables reports, vendor reports, and more. With VERSAPAYABLES", you can even let your competer automatically select which vouchers are to be paid.

VERSAPAYROLL"

VERSAFAYROLL."

5/9/.95

VERSAFAYROLL." is a powerful and sophisticated, but easy to use payroll system that keeps track of all government-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSALEDGER If system.

Versalnventory**

VERSAINVENTORY" is a complete inventory control system that gives you instant access to data on any item. VERSAINVENTORY" keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a presel reorder point, and allows you to enter and print invoices directly or to link with the VLRSAINCETVABLES" system VERSAINVENTORY" prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year to-date sales reports, price lists, inventory checklists, etc

50 N. PASCACK ROAD, SPRING VALLEY, N.Y. 10977
